1797. What can we do with Atari

Newsgroup: comp.sys.atari.st
Date: 1994-04-27 17:16:22 UTC
From: rimfax@acs4.bu.edu
Message-ID: <2pm6l6$f6m@news.bu.edu>
Source record: 188059

I must confess I am a loyal Atarian, and fascinated, while at
the same time disappointed and frusterated, with my Atari.
Somehow, I have the feeling that I am not the only one.

I wonder if there is some way to reverse the illness that
the Atari world has acquired? I used to joke about what I would
do when I bought enough stock take control of Atari. (What a dream!)
I suppose that the first thing I would do would be to start a
huge marketing scheme, commercials, billboards, etc. Then I would
distribute as many computers at as cheap a price as possible, maybe
giving "free" units to distributors. The idea is to get people
hooked. I am not a marketing genious or anything, but something would
have to be done.

Is there anything we can do?

As I look about the net and read articles from many different
Atarians, I see a whole lot of intellect. There is a whole lot of
potential for Atari computers and the diehard users sitting in front
of them, but how do we tap into that. Is there a way to insure that
this little stream won't dry up? I know we have the Archive, which
seems to be a source for our little stream, can we build on that?

Are there any ideas out there?

I have a few: (if there too outlandish just call me a dreamer!)

1) Start a tutorial on the net. May'be one or two
lessons a week. Starting with the basics. i.e. this is
an Atari computer. May'be Micky Boyd can even back them
up at a.a.u.e.

2) Build the Ultimate computer. (No idea how to
do this, but hey! It could happen!) Then have
multimillion dollar conventions.

I have no idea where this COULD GO. But, a unified
Atari world working together, could probably create spectacular
computers, software etc... I am reminded of a quote I have heard
somewhere before "United our stream stands, divided our stream
drys up and dies."

Who am I? Just a silent Atarian who has read this news
group for about three months before I finally felt it worthwhile
to speak. May'be its the awesome spring day, and feeling in tune
with all the rebirth going on outside.

Wayne T. Schultz

>A> Please quote sources when you claim things like this.

What CRAP! Frontier has hardly sold that many copies on the PC, even.
Are you sure you don't mean 230.000?

>QUALITY software sells in quite large amounts on the Atari, CRAP ports however
>sells NIL ..

Define "large amounts", please. Market research material I have reviewed
did not indicate any sort of significant market share for Atari software.

>Second: I have never been able to hit a ship by flying and targetting
>manuel while having engines on. I follow them constant on 1.5 km or so
>but never hit them although I frequently think They should have been hit

My combat tactics is fairly simple:

- Turn on text display on the main screen.
- When being warned "Ship under attack", turn the Autopilot off and get the opponent on-screen. Click him/her with the mouse to target your weapon and auto-pilot. (I use the joystick and mouse simultaneously, that DOES help a lot!).
- Turn the autopilot back on to fly after him.
- Click the Radar Scanner (if you have one) to see ship type and bounty
- Arm a missile (Navy Missile recommended :-)
- _If_ the autopilot gets the enemy into the crosshair, fire lasers (Beam laser, these pulse thingies are rather useless)
- Else, have him get REALLY close (less than 1 km) and fire a missile.
- Or, if the enemy's ship is considerably smaller than yours, simply fly into it.

But then, I have an Imperial Trader with 4MW beam laser, 6 navy missiles, 5 shield generators and hull auto repair...

Combat is NOT recommended for those still stuck in a smaller ship, just trade between planets with stable government and earn some money.

The ship I had before (an Imperial Courier) is the first one that got me down to an Anarchy planet in one piece.
I sold Robots there for $2816 per ton ON THE STOCKMARKET!

For fun in combat, you REALLY need hull auto repair and loads of shield generators - it's no fun without HAR (ever clicked "Repair 250kg of hull" 1200 times? I did :-(Glad I have a Logitech mouse) and without SG, you won't live long.

have fun - Peter

1801. Re: Gemulator & TOS 1.0, 2.05

Newsgroup: comp.sys.atari.st
Date: 1994-04-27 20:00:23 UTC

Message-ID: <2pmg8n$m42@sentinel.mdd.comm.mot.com>
Source record: 188080

I have in my hands a review of Gemulator 3 in ST Applications. It is
very favourable and has given me hope, at least, that if I do hold my
breath and go PC, I can still use my current software base.

Some of the things this article mentions:

1) The software emulation carried out by the Intel chip is
capable of processing one 68K instruction in 5 cycles
for a 386 and in 3 cycles for a 486. This means a 486/66
should give roughly 22MHz 68000 speed.

The GEM Bench stats supplied were for a 486DX33 and none of
benchmarks was worse than 108% of a standard, non-blitter ST.

If NVDI can run on top of that, then the speed should be
pretty hot.`

2) Parallel printing is available from the PC port.

3) Gemulator supports up to 8Mb RAM, and is capable of partitioning
down to 512Kb. Think of the RAMdisks!

4) Under SVGA, you can access screen resolution of 800x600x16 colours
(apparently VERY nice for Geneva).

5) All Atari-format disks supported.

6) PC serial port supported with the usual TOS-based problems.

7) Sound support via Soundblaster card.

8) Will run under WOndows 3.1 or OS/2 2.1 or MS-DOS or DR-DOS.

9) No cartridge port or mose plug, therefore no place for dongles.

10) No MIDI support (yet, maybe).

My own mutant ST is on its most recent set of last legs and I don't think
I'll be upgrading to a Falcon because of Atari's apparent lack of interest
and my desire to finally be compatible with my workplace. This Gemulator
thingy is encouraging to say the least. I am no longer faced with the
onerous task of replacing my cheap-and-friendly ST software with hugely
overpriced Windows packages.

The only thing I didn't get from this article is a price. I gather it's
somewhere around the 200-Pound mark in the UK. What is the Canadian price
and does anyone have a North American address for Branch Always??

1802. Re: STE Games...

Don't forget the PD/Shareware ones...

DYNABUSTERS, the Super Bomberman clone mentioned here before, can be found at ftp.tu-clausthal.

This is a great game and it is STE specific (runs on my Falcon great)! Among other things, this game features STE hardware horizontal scrolling and 5 voice stereo sound (i.e. 3 voice music with overlapping digital samples and music).

If only more games were like this.... I recommend that you check it out!

SS> I'm starting to think about getting myself a Falcon without a hard
SS> drive. Where can I get the best price in the US on a 4 meg machine
SS> without a hard drive, and a 14 meg machine without a hard drive?

Try Systems For Tomorrow (1-800-875-4943). I have bought 4 Falcons from this dealer and can attest to his service and commitment to the customer.

I have also dealt with the following dealers and had NO PROBLEMS whatsoever with them:

Computer STudio (1-800-253-0201)
MID-Cities (1-310-867-0626)
The Computer Network (1-818-500-3900)
Horizon Computers (1-303-777-8080)
Run PC (1-303-493-5565)

SS> What
SS> monitor will give me the most resolutions at the best value?

If you can find one, get an NEC 3D MultiSync (and a MultiSync Gizmo of course :-). The 3D will do all the ST modes as well as all the true color and VGA modes. They can be had for a good price - when you can find them. I think the NEC 3ds have been discontinued and you will have to get a used one or find one on closeout somewhere.

1807. Putting my TT in a Tower?

Newsgroup: comp.sys.atari.st
Date: 1994-04-27 21:34:27 UTC
From: dud@u.washington.edu
Message-ID: <2pmlp3$d6g@news.u.washington.edu>
Source record: 188084

Over the past couple years that I've had my TT, it has been becoming more and more cumbersome. I've added a Nova graphics card, an external 212 meg HD (on top of my 245 internal drive), and a Philips 17" monitor. The inside of my case has become packed with memory boards and cables and I ripped out a lot of the metal RF shielding. I lost a lot of the screws that hold the thing together too. I still like the external appearance of my case, but it isn't as handy as it used to be.

What's the best way to put it in a tower case? I've heard things here and there about people doing such a thing... I've looked in Computer Shopper and found places that sell all kinds of tower cases. However, because the TT's motherboard is almost 19 inches long, and I still have to have room for the power supply above it, I'd have to get one of those mega-skyscraper towers, which cost about $200 and I have no place to put such a monster. Has anyone successfully put one in a medium tower (that size looks about the best to me)? I've gotta stick two 1" high HD's and a 1.44 floppy, a Nova 16M graphics card and its VME adapter, and a 4/16 meg FastRAM card in it as well, and I'd like to be able to have at least the most important ports on the outside (SCSI, DMA, Printer, serial, cartridge, keyboard, monitor, etc.).

Thanks for any pointers...

Dan Aylward

My last version of SMPTE Track doesn't work on the falcon. The 2nd to
last does. Nor does Genedit, but I know I don't have the latest. Mine
is 1.1, and they are at least up to 2.0

Does their latest versions of these work on Falcon?

Thanks,

Jeff

I just did that, and that is right. Cost me $50 for two cables. The
drive of course will be connected to the Power supply, then you buy a
ribbon cable to Centronics, and the a SCSI II to Centronics. Have the
drive turned on when you boot the Falcon. Select Install Devices, and
create an icon for it. You also run the hard disk utility for
partitioning and formating the drive. However, you should be able to
use the ST config if that is what you want.

You don't need to buy any software.

Hmm, I think that the Soundblaster -um- 16bit Two (I can't remember
the official name- sorry for this) can do this:
It has a DSP it's capable of 16bit stereo.
Doom supports this sound card.

Send me your PC, I'll put NEXTSTEP on it. As soon as DOOM is released
for the Jaguar (complete with better-than-320x200x256 graphics and real
sound), I'll send you a Jaguar and the cartridge.

I'm fairly certain that there is no such thing as an MPEG player for the Atari ST. MPEG files are generally like JPEGs, only with animation, and on an 8MHz 68000 they would have *forever* to decompress, not to mention the fact that they would likely take up a good deal of RAM. It may be possible on the Falcon030, using the DSP to decompress the data, but on an ST I sincerely don't think it's possible -- or rather, viable.

From: diehl@io.org
Message-ID: <2pnbea$bos@ionews.io.org>
Source record: 188231

In other words, forget even trying to do it in GFA. ;-) Fortunately,
since it is an art program, I don't actually need the speed -- a terminal
program is quite a different matter. I just like to *have* the speed for
the sake of a faster program. I'm a a bit of a speed nut. (which is
slightly at odds with my choice of programming languages ... but I still
like GFA) Your method, however, does sound a little complex. And the
real question is, could I, if I licensed your routine, get it to work
properly with GFA? (i.e. pass the routine a few X and Y and
colour attribute parameters on to the D0-D7 regs, and let the routine
take care of putting it on screen, then pass control back to my program)

Thanks for the help.

Source record: 188172

```
====================
Yawn. Old argument. With bitplane modes, you don't have to draw on all
bitplanes. This isn't much use in a general graphics environment (eg. VDI),
but with direct access, all sorts of amazing effects are possible.
====================

Warwick, I'm surprised at you! Direct screen writes .. on an ST? Just
for some cheezy effects? At the sacrifice of more general VDI speed?
You asleep today? That doesn't sound like you. And in 256 color mode,
it just may be faster to do those effects with chunky instead of bit-plane,
even if you don't write to all planes. Were talking one move versus some
hefty computations (hefty by comparison anyway). In lower color modes, sure
you can get mono bit-maps like text on the screen MUCH faster than if you
had to rotate away the color info from a chunky mode, but when its 1 byte
per pixel things get alot easier!! And the more general your application,
the better than chunky becomes.

Amazing effects? The ST and STe don't amaze me anymore.
```

When mixing samples, or over-sampling, do youo use arithmetic averages
or do you use a logarythmic approach? I devized a few methods for doing
either re-sample or sound mixing using SIN and ARCSIN tables that should
sound alot better than averages. I was also thinking of using the same
methods with an anti-alias algorythm (just like in graphics) to smooth
out the distortion and noise from a sample (assuming contrast and aliasing
in graphics is like distortion and noise in a sample - only with sound you
can't average it away - not directly).

1829. GEMULATOR

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 05:31:39 UTC
From: ekl@sdf.lonestar.org
Message-ID: <CoyFCs.9JD@sdf.lonestar.org>
Source record: 188169

==========
Everyone should realize that there is NO hardware support for the
ST/STe with the Gemulator, so you can only expect TOS apps to run
sucessfully. With the price of used STe's (I just sold a MegaSTe4 for
$250) there is no reason to get one of these items UNLESS you want to
run Calamus or something on a PC at work.
==========

Everyone should also realize that a 386 and higher DOES have the capability
to emulate hardware access and trap into the OS or other code. And when
emulating you have such total flexibility ANYTHING is possible. I'm going
the other direction as fasr as emulations though.

: on the COMP.SYS.ATARI conferences?

: What about deleteing parts of messages you are replying to?

: Any maximum for Sig length?

: Anything else a "freshman" should now?

I don't know of any rules specific to this group (except of course to post stuff relevant to the Atari ST & related computers... but that's just a specific instance of a common rule).

In general...

When replying a message, trim the original down to what you are replying to. If the original has 4 paragraphs and you're only responding to 1 of them, carve away the other three.

Keep your sig short. I have never heard any objections to 4-line sigs. I have heard objections to 10-line sigs in many places. Try for 4 lines, recommended.

If replying to a message which is cross-posted to multiple newsgroups, seriously think about whether your reply is really appropriate to all the newsgroups. If not, trim a few out. Don't use reply-to lines under normal conditions -- the default is that a reply will go to the same newsgroups as the thing being replied to; and if your message isn't appropriate to some newsgroup what makes you think a reply that you haven't read will be? (Makes it easy if the message you're replying to already has a reply-to line: just delete it.)

Try hard (sometimes the temptation is too much) to *not* reply to make.money.fast, obvious flamebait, or posts that are clearly not relevant to the newsgroup you're in. Or to crazies such as serdar argic or john winston even if they are more-or-less on topic.

(Exception to the last: I encourage everyone to reply to these in email, with just a copy of the message -- no additional text. That green-card malarkey has gotten into every newsgroup I read at least twice, so I suspect it's well nigh universal. If every reader of each newsgroup emailed a copy of this message back to the source each time they encountered it as a new message... well... the source would soon stop one way or another.)

This sounds good, but only people who have net access would benefit
from this. I don't think there are such a lot of novices in the
ATARI computer scene who have net access.

|> 2) Build the Ultimate computer. (No idea how to
|> do this, but hey! It could happen!) Then have
|> multimillion dollar conventions.

I don't know whether there will be the _ultimate_ TOS machine
in a short time. However, there are already two machines that
can run TOS and are not produced by ATARI; Medusa T40 and
GE-Soft Eagle.

The Medusa is supposed to be a _very_ fast machine (32/64 MHz
68040, better board design etc.). A speaker of Digital Arts
reported on the ProTOS computer show that in a _real_ DTP
application, the Medusa was 7 times faster than a TT.

But this machine is just too expensive to give the ATARI/TOS
market the right kick.

The Eagle still cannot be bought, although it is supposed to
be shown on the FEZ-A-BIT computer show in May in Berlin.

I heard that one of the main problems to build ATARI clones
or new TOS machines is to get a license from ATARI for their

operating system.
If ATARI just went ahead and said "Hey, everybody can have TOS
for free!", things would be much easier, and perhaps clones would
have appeared much earlier - it actually is too (?) late now.
But what could ATARI lose if they did that?

Perhaps Magix is a way out of the TOS dilemma, as it is a
complete replacement of the original OS, not a patched TOS.
This means that a company wouldn't have to ask ATARI if they
wanted to release a new machine, but Sven&Wilfried Behne, the
Magix developers, who would probably be much more open for that.

The problem is, that Magix has to be adapted to new hardware,
if it is supposed to support the new features. Remember that
the Falcon compatible version isn't out yet - no wonder, as
the programmers have enough to do with the new video modes etc.

Finally, it also is a problem to attract _new_ potential users.
There are hardly any new ATARI users in schools and this means
that the TOS market can only be kept stable, but it doesn't
grow. Has somebody an idea how to encounter that problem?

Well I am sure glad I don't live where you are! BTW in this country it is different. Sure there are like 30 different stores. But the computers cost an Arm and a leg. There is really only 2 good places to shop. And they are across town from where I live. Even trying to get a modem for the computer was hard to do and when I went into the IBM places there wasn't NO support at all. The only way they give you support is if you plan on buying a computer from them for 1500 dollars. US dollars that is. I don't know what the difference in the Cash Exchange from where you live and where I live so I wont go into that. But I do know people who bought an IBM computer and they had a headache ever since. And this one guy didn't know one single think about computers and he had an IBM 386sx. I never had an IBM and I knew more about that computer then he did!

One think I know about Atari owners. They do know how to use different computers. That is one of the reasons they bought the Atari they wanted something DIFFERENT then the norm!

So I guess your a Dos/Windows freak. BTW I used both and I didn't see any pluses to have either one. Windows takes up too much ram and disk space. And Dos takes up to much memory. Plus you have to deal with EMM's and all sorts of road blocks. Config.Sys, Autoexec.bat files and other things you have to have in there before you can even turn on the computer. I would like to know why they call Windows Ease of Use programing.

Clifton Mothershed!

C-Breeze is an editor, not an interpreter. It is a rather splendid and very
configurable editor though. But its a little old. Don't know what C-Envy is
though.

I thought that HiSoft 'C' was the ONLY 'C' interpreter available on the ST.

>>as it is loading a GIF!

The main reason for the fast JPEG loading in mgif 4.2 is the fact that
the old mgif versions were greyscale only. A JPEG can be decoded for
greyscale display much faster than for full 24 bit or quantized colour.

The GIF loading has been speeded up a great deal since v4.2 and I think
mgif has now regained the position as the fastest gif loader around. ;-)
The GIF decoder is still 100% C!

Like almost every other JPEG decoder around, mgif uses the IJG library.
In this case it is compiled with gcc 2.x.x, which might give mgif a slight
advantage over some programs created by other compilers.
TurboC/PureC really are incredibly bad at optimising, though their code
generators make up for it sometimes. In mgif, however, there are some
functions that takes four times as long when compiled with TurboC!

Please excuse me, but I can't let you include mgif in that category. ;-)
Mgif has always loaded the complete picture, not only the part that
fits on screen. It would have been a rather useless image processing

program otherwise.

Since last week it is possible to use virtual memory for the image
buffers, so noone with an '030 machine, a harddisk and Outside/VRAM
will ever have to worry about image sizes again.

I agree with you on that point: if someone asks you to write
something for him/her you should be paid. But if I were to do
something like that (note I wouldn't, I like challenges and I love
coding) I wouldn't sell the code to anyone else.

And when I write programs for me, if someone wants to have them
with source and everything I just give them. We shouldn't pay
for software. Don't flame me for writing that:

As Robert Anisko (anisko@usdtsg.DaytonOH.NCR.COM) writes: some
people on the net support the FSF (Gnu software, Richard Stallman
for those who don't knwow...).

Everyone is free to do what he wants. Everyone is free to pay
for what he can get for free. Everyone is free to give away
```

programs and source for free.

1842. Falcon Soundplayer

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 08:39:19 UTC
From: huth@stack.zfe.siemens.de
Message-ID: <Coyo1J.3np@ztivax.zfe.siemens.de>
Source record: 188267

Hi,
i'm looking for a soundplayer for my falcon, preferable for sun .au and/or
mod files. I don't need a memory eating fancy sound editor, just play and go.
Would be fine if the thing runs as well from a command line. does somebody
know such a thing?

thanks, HP

|> }with it's cache enabled?

The fastest way to implement long word dbf is like this:

```
move.l count-1,d0
.loop: do_something
dbf d0,.loop
clr.w d0
subq.l #1,d0
bcc .loop
```

Does anyone know a fix for it making it run correctly on the Falcon?
As it is - the program starts OK, but once you take of - it's just as if you've lost your right wing - even in demo mode.

Flight Simulator II seems to work well enough - actually much better than on the old Mega - the scrolling is almost smooth :-)

Does any of you know any fully working alternatives to these two titles?

1852. Networking computers?

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 11:32:09 UTC
From: nj1@ukc.ac.uk
Message-ID: <7591@merlin.ukc.ac.uk>
Source record: 188242

I know this is gonna sound a bit odd, but here goes....

As a group of us are living off-campus next year, we had the idea of networking our computers to a modem - perhaps through a smallish computer - so we could get our mail etc. from the university system. Now then, the problem comes with our computers. Between the four of us we have:

1 Atari Falcon
1 486DX2/66
1 A1200
1 Archimedes

Sort of puts a crux in things for a start, doesn't it?

Now then, as I have just got my Falcon, I still have my old ST (1 Meg - No HD) which we could possibly use as the go-between of our computers and the modem.

Does anybody know of any software I could use of the ST to do this, and any way of linking up all four machines...

Ethernet was suggested by Steve (the PC owner) - but I haven't heard of any Ethernet cards for the Falcon or the ST...

Can anybody help????

Neil.

I do know it's not the only one.
I have the "Interpreteur C" from Loriciels (french software house,
probably dead by now). It had an impressively fast editor, possibility
to "link" with compiled code and was pretty much ANSI.
Only trouble: it didn't seem to know about the "for(...)" construct
(kind of odd for a C interpreter and I never read or heard about that
specific problem and the example files used the "for" construct, but
still: my version always complained over "for" but was running fine if
the "for" was translated by hand into a "while")

Barry Scott Munro was heard to say:

> I agree too - version 2.4 is still being used by me!

I wish that I'd kept my 2.4 around... I accidentally extracted 2.5 right over top of it. A have backup zips of my source code that I just 'freshen' on a regular basis. Zips that I have freshened with 2.5 are no longer readable by any version of STzip. Pkzip on the PC tells me to run PKzipfix which does get the files back, and a linux based unzip extracts it fine but reports about 1/2k of garbage at the beginning of the file... I have since switched to the Lharc, now that it has a VERY decent shell to work under, and it also seems blazingly fast.

Of course! It will run in any screen mode you can get as long as you've got
at least 640 pixels horizontally and 16 colours.

1867. Re: What can we do with Atari

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 14:26:44 UTC
From: L676791@LMSC5.IS.LMSC.LOCKHEED.COM
Message-ID: <16FA668D1S86.L676791@LMSC5.IS.LMSC.LOCKHEED.COM>
Source record: 188260

Sam Tramiel recently admitted in an interview in the San Francisco Chronicle
that Atari has pretty much abandoned the personal computer market. All we
can do is hope that the Jaguar game console keeps the company alive so that
at least there is an Atari. Otherwise, we'll be the proud owners of orphans.
I don't ever see the day when hardware and software will be available for
an Atari computer like it is currently available for PCs and Macs.

1868. Atari Stuff for Sale

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 14:51:45 UTC
From: lannie@picard.infonet.net
Message-ID: <2poii1$9ht@insosf1.infonet.net>
Source record: 188268
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have the following items for sale:

1040STf 1Meg TOS 1.4 (6chip)
ADSCSI Plus adapter
SC1224 Color Monitor
SM124 Monochrome Monitor
Citizen 180D Printer
Practical Solutions Cordless Mouse (Wonderful)
Joystick
Hayes 1200 Baud (Joystick & Modem go with computer)

Software in Boxes, with Manuals

Arena
Hunt For Red October
Karate Kid II
Championship Wrestling
Dungeon Master (Great)
Out Run
Battle Chess
GBA Championship Backetball
Hard Driv'in II
Gone Fishin
GFA Basic 3.0 Editor/Compiler/DOCS
DBMan Version 2.0

All items can be yours for a reasonable offer. I really don't
want to put a price on them. I just want some offers. The best
offers get it. You can e-mail me at Lannie@ins.infonet.net,
or Lannie@data.infonet.net.

Everything listed is in good working order. The exception is the
printer. It works, but it is very used. The print quality is still
the same, but it's casing is a little worn.

1869. Modem init problems

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 15:29:14 UTC
From: mkosk@freenet.hut.fi
Message-ID: <2pokoa$2jh@freenet.hut.fi>
Source record: 188281

I can't get the modem initialization to work properly on my new BBS system. Sometimes it works, sometimes it doesn't, and I can't think of anything that could be wrong. The string is correct, ATZ0, the baud settings are correct (I've got a V.32/V.42/V.42bis modem, and my settings are as follows: Idle Baud rate: 19200
Min. Baud rate: 1200
Max. Baud rate: 19200
Lock Baud rate: 19200 so they should be alright). I've got the HSFIX.PRG in my auto folder, so RTS/CTS *shouldn't* be the problem. I've tried changing the Idle and the Lock settings to smaller, but it still doesn't work. The BBS (Transcendence) itself shouldn't have any bugs causing this. And my terminal programme initializes the modem just fine.
Could anyone tell me what's wrong?

1870. PowerDOS - what is it??

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 15:34:49 UTC
From: ceebsm@cscd4c22.caledonia.hw.ac.uk
Message-ID: <Coz7A1.4u7@cee.hw.ac.uk>
Source record: 188291

Wonder if anyone can help me. I've had a copy of PowerDOS lying around in my disk box, mainly because I don't have a clue how to use it. Am I correct in thinking it is some sort of Multitasking software made PD as it has no instructions?

The concerned program is available on some FTP sites. The program was written by Dragonware or someone like that.

Any information at all about it would be appreciated.

Barry

1873. Re: A Falcon Developer Speaks about Doom...

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 15:56:34 UTC
From: <>
Message-ID: <2pombi$fjf@mother.usf.edu>
Source record: 188258

Speeking of DOOM, I went to that DOOM RTC on GEnie a few night ago. I was there with one other Falcon user who wanted DOOM on the Falcon. He and I both asked about a Falcon version of DOOM, and we were blown off quicker than you can skake a stick. The responce _I_ got was a very rudely placed "Falcon = no money". The other guy got a bunch of no's.

1874. Re: Problems with Miniwin/Toswin ....

>Hi All,
>
>I seem to have found a problem with Miniwin/Toswin which I use for running tcsh,
>mintshel, etc...

Miniwin was actually a bad idea as far as running TOS in a window goes - it runs a new copy of itself each time it is run - and doesn't multi-thread to save memory.
Eric's original approach to running TOS programs was much better from a memory saving point of view.

>After running miniwin the total free memory drops - I'm checking this using the
>"Desktop Configuration" menu option under MultiTos. I've lost upto 50kb each time
>I run miniwin !
>
>The same also happens with Toswin (Warwick Allison's version) which I just compiled
>last night.

Install RUNTOS.PRG as the TOS running application, and run TOSWIN.APP (Warwick's version) from the GEM.CNF file - this cuts memory overhead quite a lot.

>Has anyone any idea why miniwin/Toswin 'loose' memory - where is it going ??
>The system I have is a 4Mb Atari STE with hard drive, MultiTos (with MiNT 1.09),
>NVDI, Deskpic (with a nice picture of Tori Amos !), and MinixFS (pl9).

Get the pl10beta filesystem - it's more reliable than the pl9 one (well done Stephen H.)

1876. CFN's Jaguar Vote--most wanted games for the Jaguar! Vote!

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 16:50:40 UTC
From: xx004@cleveland.Freenet.Edu
Message-ID: <2poph0$dnv@usenet.INS.CWRU.Edu>
Source record: 188269
Cross-posted to: rec.games.video.atari,rec.games.video.classic,rec.games.video.arcade,rec.games.video.misc,comp.sys.atari.advocacy,comp.sys.atari.st,alt.games.lynx

If you haven't downloaded the latest version of CAIN Newsletter, here is
your chance to participate in voting for the most wanted games for the Jaguar!
The results will be looked at by Atari Corp. This vote is being done by
the Cleveland Free-Net Atari SIG.

Most Wanted Games on the Jaguar!

Here's your chance to determine the most wanted games on the Jaguar!
If you own a Jaguar or think you will own a Jaguar in the next year or so,
you are allowed to vote on the most wanted games for the Jaguar!

INSTRUCTIONS: You may use 20 points to vote on any of the games on the
following list that you would like to see on the Jaguar. The list was
compiled from lists of games that game players throughout the world
contributed since the last CAIN Newsletter. You may allocate as many
points as you want in vote of a game, but you may NOT use more than a
total of 20 points. If you use more than 20 total points, none of your
votes will count.

If there is a game that you would really like to see made for the Jaguar
but it is not on the list, you may add that game to your votes. But you
are required to give that game at least 10 of your votes.

EXAMPLE:

Mortal Kombat II.....Acclaim/Midway.....[06]
Sinistar.....Williams/Midway.....[03]
Archon II.....Electronic Arts.....[01]
Dimensions Through Space (made up).....Dimensions'R'Us.....[10]

NOTICE: The game that isn't on the list is Dimensions Through Space.
This game does not exist but the game that you would like to see should
exist. 10 points were given to that game since it was not on the list.
This system is to assure that games not on the list will still have a chance
to be a most wanted game (especially if others suggest it too). Also,
if you add a game, you need to include the company that has the rights to
make it.

As you look through the list, you may find errors. If you find an error,
please include information on the error along with your votes.

We are unaware (and most others) of who has the rights to certain Atari
games--Atari Games Corporation or Atari Corporation. If you are aware of
who has the rights to the game, please send the information to the

address along with your vote.

I have been assured by a representative of Atari Corporation that the list of most wanted games will be given to the appropriate person at Atari Corp. after all votes are counted.

Finally, it should go without saying that all of the older games listed would be enhanced versions of the original for the Jaguar.

: Now I know that the STFM hasn't the world finest sound chips but I have also
: managed to get a cheap stereo replay cartridge off another friend. Do any
: mod players/trackers exist for the STFM that use the stereo replay as a
: playback device? Is this a really silly question?

There is a modplayer called American Gold Replay (agplay.lzh) which is
working only in color resolution (st low) and another called PTplay
(ptplay12.lzh). Both can't play mods in the background cause it takes too
much processor time on a standard ST without DMA sound. The sound quality is
reasonable for both players.
There are also Soundtrackers that use ST Replay as output device, such as
Digicomp, ProTracker2.0 and Noisetracker (rather old).

1881. SALE: Atari Transputer Workstation & Farmcard

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 18:41:47 UTC
From: dt93tn@pt.hk-r.se
Message-ID: <1994Apr28.184147.6848@nomina.lu.se>
Source record: 188275

I have two Atari Transputer Workstation computer ATW800 and one
Quad transputer Farmcard for sale.

The Workstation consists of two computers in one.
The Server is an modified Atari Mega ST computer that is taking
care of the mouse/keyboard/harddisk/diskdrive. Both parts has its
own graphics system and display. The Client is consists of at least
one T800 transputer communication via 20Mbit links.

Here's some technical specifications:

Processors:
main:
32-bitars INMOS T800-G20 20Mhz with built in FPU
Graphics:
RasterOp processor designed for X-Windows
64Mbyte/sec area fill
Hardware line draw fill
Support for patternmatching and sorting of data

I/O: (Server) Atari Mega ST 8Mhz Motorola 68000
Communicates with the T800 via a 20Mbit/s link.

Memory:
Main: 4Mbytes Dram for Transputer
Video: 1Mbytes dualported for Transputer & Graphics
I/O: 1Mbyte Dram for Atari

Video:
Mode: Resolution: Bitplanes Palette
0 1280*960 4 4096
1 1024*768 8 16.7Million
2 640*480 8 16.7Million
3 512*480 32 16.7Million

I/O ports :
Keyboard, mouse, SCSI, printer, RS-232, Midi, ACSI(DMA),
4 buffered transputer links (ECL and TTL), RGB video output.

Disc Storage:
1 40 Mbytes Harddisk
1 720 Kbytes diskdrive

Expansion:
Room for 12 extra T800's, crossbar switch, memory expansion,
ethernet....
Plenty of room for more harddisk and discdrives....

Operating System:

Helios (UNIX) multitasking, distributed operating system.

User Interface:

X-windows

All this is built into an metallic Towercase.

Please let me know if you are interested or you want some
more information. Please give me an offer for this amazing
computersystem.

I also have an Transputer Farmcard forsale.

The farmcard consists of 4 T800-20Mhz transputers and each
transputer has its own 1Mbyte memory.

The Technical specifications of the card is:

4 T-800 tranputers 20Mhz
4 Mbyte`s of ram, 1Mbyte per Transputer.
Reset, Analyse and Activity LEDs.
Can be used with ca C004 crossbar switch

Please give me an offer for this Farmcard.

I'd like to know if there's someone outthere who can send to me
C or C++ programs about those kind of things :
- Drivers (all kind)
- Aplications with the direct using of bits.
- DataBase.
- Display using and Scrolling techniques.

Could you give a small introduction into the program working please ?
Thank you very much for your help

Fine, okay, wonderful - so support in your country is lacking and
economics make the Falcon a poor choice of machine. This is a relevant
point but mindless slagging of the machine when Falcon owners have said
that they made a good buy is a waste of time.

No, there is no dbf.L - its always a word instruction. (maybe on 040 or 060?)
I wouldn't use two loops right after another, well, kina. Nest the loops
so that you won't duplicate the code and screw up the caching.

No .. using 2 moves won't muck up the cache - execution and bus access and
stuff all happens in parallel. The data cache is 256 bytes, code is 256 bytes.
The 386 is .. 16 bytes for everything I think :-) My AdSpeed is 32K data
and 32K code :-)

Syquest recently dropped the price of their 105mb cartridges to the same price as the 44mb ones (!). This is about $69 per cartridge, but the price goes down if you buy a bunch. As for where, just about any Macintosh supply house will have them. Check out a Macworld magazine (or similar) for some ads.

Yes, unfortunately you are right.. In smaller countries, one has to pay more
just to get less (if any) service for a minor computer. Here in Finland (east
to Sweden, if somebody didn't know.. ;-) we have roughly 5 million people - and
very anti-Atari biased atmosphere ..! Computer magazines, etc. just about
hate us Atarians - and therefore tend to be quiet about the Jaguar, too.. Or
remember to mention that "The cat isn't a 64-bit machine at all..".
O.k - in this PC/Amiga/Mac-filled place, you'll get laughed out of any shop, if
you even mention the name Atari. But still, there are pretty lots of us who buy
Falcons, and other Atari-stuff. We pay more, but still think it's worth it...

By the way: anyone who wants to buy such a machine as e.g Falcon 030, needs
some kind of strange self-confidence, because most people one meets, tend to
ask: "WHY such thing - when you could buy a REAL computer, too..?". That's
hard for many of us. I don't personally care, but many people would like to
belong to the majority - and not get kicked all the time... And that's why our
user groups, modems and relationships are so vital. They remind people: one's
not alone..

1891. a.a.u.e Uploaders please read this

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 21:11:22 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <2pp8pq$1jb@mailer.fsu.edu>
Source record: 188282

As a small break with the past, I would like to encourage uploaders to atari.archive.umich.edu to upload small description files with their offerings. For example, if one were to upload blah.zip, please also upload blah.readme or blah.txt, with a brief description of the program and your email address included. A one-liner is sufficient. If you are uploading a bunch of stuff, a single combined description file is OK.

The old method (sending email to the archive manager, me) can still be used, but uploading small description files is preferred. I don't want to be a bottleneck to the upload process if I am out of town or too busy to pass the pertinent email along. With a small description file, the other archivists at atari.archive.umich.edu can process the files without waiting for me (should I be detained). This should speed up the transition from /New to /Newitems.

Thanks in advance.

I believe the only way is to connect it to an machine that *can* cope with parity, and then change one of the bits in the revlevent register with the appropriate SCSI command.

However I don't have any more details.

:-(

>
>Sort of puts a crux in things for a start, doesn't it?

Yes!

>Now then, as I have just got my Falcon, I still have my old ST (1 Meg - No HD
>)
>which we could possibly use as the go-between of our computers and the modem.

The old ST isn't really suitible as it only has one serial port.

>Does anybody know of any software I could use of the ST to do this, and any w
>of linking up all four machines...

Stick a PC in the middle with multiple serial ports and put Linux on it.
Run all the other machines with a terminal emulator.

Or hack (or buy) a midi port onto each machine and link the lot
together. You'd have to write some network software though.

Alternatively pick up an obsolte mini computer if you are feeling brave.

Not much fun I know, but IME proper networking of such diverse machines
is likely to be tricky and costly.

>Ethernet was suggested by Steve (the PC owner) - but I haven't heard of any
>Ethernet cards for the Falcon or the ST...

Yes but expensive. There are ethernet cards for the Arch as well, and no
doubt the A1200 if you look far enough.

:-)

Roland.

I believe this device must be told to disable parity via a SCSI command.
This means that you will need to connect it to something that does support
parity, and issue the correct command. I think Quantum will give you the
program to do it for a Mac.

Alternately, you can get a host adaptor that supports parity, like the ICD
ADSCSI series or the Link II (the later is not yet available).

1898. UPLOAD: GEM AmiGo (Go Player)

Newsgroup: comp.sys.atari.st
Date: 1994-04-28 23:43:40 UTC
From: warwick@cs.uq.oz.au
Message-ID: <2pphnc$8jp@uqcspe.cs.uq.oz.au>
Source record: 188288

```
GEM AmiGo 1.0

by Warwick Allison

Uploaded gemamigo.zip to:

*atari.archive.umich.edu
ftp.uni-paderborn.de
ftp.uni-kl.de
ftp.tu-clausthal.de

This is the first public release of GEM AmiGo a port of the X11 port of
the Amiga Go program AmiGo.

GEM AmiGo runs in any resolution, including HiColor and TrueColor, and
MIGHT work with just 512K.

Sources are included. To rebuild the game you'll need G++ and GEM++, so
don't lose the PRG if you don't have those!

Feel free to mail me any comments and suggestions for improvements, but
realize that I'm not really a Go player - I just did this port for you.

The .RSC file is very changeable. RSC files in other languages would be
useful. All buttons can be replaced by different object types, so if
you're really keen, Kanji buttons would be atari! The IMG files can
be modified (even changed in size), so long as they are kept as
monochrome IMG files.

Source record: 188196

Yes, I was quite aware that you can run a "PPC" as a Macintosh. Apparently slightly slower than the equivalent 68K-based Mac (which will probably change as the libraries get increasingly rewritten).

That's not much value added, emulating a computer with a reduction in power.

And the IBM product will currently only run AIX, requiring that you fork() out (or vfork(), depending on your process type preferences :-)) big money for the sundry pieces of the AIX operating systems. XWindows, for instance, is an additional chunk of money. I was pricing RS/6000 machines a couple months back, and was surprised at how much it cost to put together a workable software development environment. I keep hearing that it's a "pretty cheap & powerful" UNIX platform. If it's as powerful as it is cheap, then I'll stick with my ST, thank you very much :-).

The only faintly consumer-oriented product in the P601 family right now is the Power-Mac. And running Soft-Windows on it to emulate a Mac emulating a Windoze environment just doesn't strike me as being very sensible or efficient. No more than one level of emulation at a time for me.

>have to be done.
> Is there anything we can do?

Several years ago, there was a "movement" called something like "The Atari Revolution" or something like that. This was, if memory serves, a movement spawned by a group of Atari enthusiasts which, at the conclusion, would (theoretically) enforce public knowledge about Atari Corporation in general and Atari computers in specific. There was, if I'm not mistaken, a One Year plan for this movement, starting with little things like signing all of your messages with the Fuji logo and the "Join the Atari Revolution!" tagline and culminating with radical publicity stunts, such as something like having ten million Atari customers (are there that many?) writing to the David Letterman Show asking him for public support of Atari or something like that.

Needless to say, though this message got a lot of spread over cyberspace, it fell flat on its face.

Why? My guess is this: There aren't that many Atari users left (in comparison to other platforms), and those that ARE around don't have the time/money/enthusiasm/whatever they once may have had for their platform.

The only entity that can bring Atari back from the edge of oblivion that they're now standing on is Atari itself. Though I dislike to admit it, Atari has little if any intention of making "Atari" a well-known computer name. They aren't supportive of their existing userbase, they aren't seeking to expand their userbase, no significant new technologies or machines are forthcoming from them, they're not courting major hardware or software manufacturers to produce Atari software, and their stock has been on a steady decline almost from its announcement.

My point is, though it's a noble effort, it's also a futile one. No significant portion of the Atari community is going to expend 500% of their energies into supporting a company that, objectively speaking, doesn't seem to want the attention.

Source record: 188041

Ok, so I wasn't paying enough attention the last time we discussed
this... sorry.

Is there a word processor on the Atari platform that supports:

* Macros
* Named styles
* Search for styles

Right now, I'm not at all concerned with anything else... I'd like to
make a document template/style sheet/macro set to make it easy to create
HTML documents.

Somebody's already got Lynx (the text-based World-Wide Web browser)
running via MiNT-net (!), now I'd like an easy way to create HTML
documents for it on the Atari. Naturally, this is easy under Windoze
using MS Word and the CU_HTML document template...

I suppose I could start writing an HTML editor, but I'm way too busy
right now. Pity, I've always wanted to write an editor...

Problems in getting files from TU-BERLIN

I find that its some times possible at the week-ends to get files with Gopher
server, but we were asked to use the mail-server..

This has big problems also...

No responce to mail-sever requests..!!

Files being droped, not sent, but acknowledged ..??

System goes to sleep..!!

This happends some 30% of the time...

Recent problem..!!

On Wednesday night NZ time, I requested 2 files, no responce..

On Thursday mid-day I requested the same 2 files, request acknowledged..

One file sent later that day, so far the other file has not been sent
as of mid-day Friday...

Are these normal Net problems..??

You'll just have to travel between different planets/space stations until you can find a place where there are four available crewmembers on the bulletin boar.d

THe easier way is to not jump to such a larger ship. What I did is upgrade slowly, moving into ships that only needed one or two more crew members. That made it much easier to do the upgrade, since there's a much better chance of finding two crewmembers for hire than four.

Just my thougts...

I just bought the A320 Airbus for ATARI ST (European Version)
when I insert the disk into my ste's drive, the game boots and runs
without any problems...
but when you look up the files on the disk, you find only *.exe and *.com
files... like on the pc.... i tried install.exe on a pc and it worked...
i could install a320 on pc and it runned.....
so i have now the atari version and the pc version on one disk....
does someone have any idea about this.... is thalion software stupid or
what..
thanx

I love those 'realists'! IMHO there's no such thing as a realist.
A realist is someone interested only in facts. Since human beings always gives an opinion, they can't be realists. Those who call themselves realists are usually just pessimists. Another aspect of self-proclaimed realists is that they usually see numeric figures as the only way to compare things. IMHO if you enjoy a computer then it doesn't matter how it compares to others in terms of price or processor speed.
It seems to me that people enjoy the Falcon, so it's bound to be a good computer for some. This 'realist' is probably someone who has never ENJOYED a computer in his life.
Anyway, I'll stay with my Amiga for now :)

1921. Re: Falcon screen display

Loop unrolling can actually help a bit even with caches on, as long as you don't unroll the loop larger than the cache, and you don't throw out something else which might also give you a performance hit. THis is because even with the cache it still needs to do instruction decodes and things, which the pipline doesn't trace through a dbra. At least that's what I've found in tests.

Dave

1922. Quartet to ???: Last try!

CEO file contents:
Hi,

There is a way to upgrade from a 4 crewmember ship to an 8 one. In fact, you have to go for an intermediate ship that needs 6 members, and then buy a bit later the ship of your dreams !

Another way that comes to my mind (yet I haven't tried it) is to get your crew, accelerate time until the next day and see if there are other people looking for a job. Remember that the bulletin board is reset every day at 0:00:00
Guess this should work too.

MegaPaint II is an excellent mono art package. On of its strengths is that
it uses the resolution of the printer, not the screen. This allows pictures
to be high quality when printed. Pictures need to be scrolled more frequently,
but the scroll bars actually scroll as they move! The whole interface to the
package is similar to GEM, but there are many small improvements.

Hi Guys

This is directed for Atarians in Australia

OK, So Atari has gone bust here, one would expect that somebody is subsequently dumping their warehouse stock ultra-cheap (I just got my hands on a new 2600 system for $19 + 10 games free at Brashs).

Their Sydney number is dead, so does anybody know how to get through, cos I'm sure they'd be happy to sell off their stock ;-)

You should be able to use the Epsom LQ emulation or the IBM 24 pin printer driver.
For the Epson you have to fiddle with the dip switches. The IBM mode works directly
from the BJ-10e mode

I thinnk these drivers are included in 1st word plus, but it has been over 4 years
since I last used an ST

1931. Re: Internationalizing software

Newsgroup: comp.sys.atari.st
Date: 1994-04-29 12:23:10 UTC
From: C.J.Ridd@cs.bham.ac.uk
Message-ID: <2pqu7e$2ov@percy.cs.bham.ac.uk>
Source record: 188176

The foreign language wordings I received by email for the phrase:
"Resource file not found. Quit"

German: "... nicht gefunden. OK" or
"... nicht gefunden. Abbruch" (Cancel)
French: "Fichier resource non trouve. Quitter" with an acute accent
on the last 'e' in 'trouve'

Regarding using different keyboard shortcuts in different countries,
apparently English ones are deemed 'universal', even though they might
not be mnemonic for a given language.

Thanks for the responses! Hope this helps people!

1932. Multisync monitor for STE/Falcon.

Newsgroup: comp.sys.atari.st
Date: 1994-04-29 12:32:22 UTC
From: rab2@ukc.ac.uk
Message-ID: <6041@raven.ukc.ac.uk>
Source record: 188177

I'm planning to get a multisync monitor for my STE with a view to using it with my Falcon, when I get it. Ladbroke Computing have the Microvitec 1438 for, um, about 280 pounds rather than the 1440 for nearer 400 so I am, not suprisingly, considering this. Rather than actually spend good money phoning them, I thought I'd ask a few questions here, in case anyone has one...

What is the highest *non-interlaced* resolution it can do (with BlowUp etc)?

What about in True Colour?

Can I fool the Falcon into thinking it is a TV for RGB only programs (perhaps using a switchbox)? Basically, I want to plug one monitor into the Falcon and never have to unplug it ever again.

And lastly, my only experience of Microvitec monitors was the horrible beige cubes used with BBC Bs at school many years ago... and with an ST in my 3rd year Physics degree project (nothing but the best here!). Someone please tell me they look a little better now, with a nice tilt & turn base etc.

Thanks,

Richard.

Date: 1994-04-29 12:39:38 UTC
From: rab2@ukc.ac.uk
Message-ID: <6044@raven.ukc.ac.uk>
Source record: 188178

Just a quickie to ask if anyone has got Universal Item Selector working with WinX and GEMRAM, cos I certainly haven't. I've tried every Auto folder arrangement possible (with just these 3 progs and absolutely nothing else installed) but to no avail. The system is 4 meg STE, 85 meg HD, TV and mono monitor.

Selectric works fine, but I can't stand it! (What's the use of showing 8 and a HALF files????)

Ta,

Richard.

>Open your eyes...
>You can get a 44kHz 16 channels card for about 200 US dollars...

yes you can!!!.... But then you need a computer 2... What will a 200$ card help me with when I dont have any MillionMips PC-clone... Dont try to tell me that this card would sound great on my PC... It won't even work... Maybe on my 386, but I only have 2Mb of memory... (Shit!! I can't play any fancy games...)

The Falcon offers so much more "Out of the box!" Than a PC for the same amount of money... Like IDE, SCSI, MIDI, Very good Sound, Nice graphix, LAN, A Nice GUI!! and so on... This is things a PC owner has to buy AFTER he bought his great box... Ok maybe not IDE, but they could have left that part out of the Falcon... Who wants IDE when they have SCSI???

Date: 1994-04-29 13:08:52 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.90jnAJIQ0QM@semprini.waterloo-rdp.on.ca>
Source record: 188039

A friend of mine on a local BBS just bought a used Forget-Me-Clock II cartridge from someone... unfortunately, he didn't get the software to drive it.

Could someone tell me where to get the driver software, or email it to me or something? And no, don't bother starting the "Oh no! He wants to pirate software over the net!" flame-fest again... this is driver software for a _cartridge_, completely useless without the hardware, which the guy has already.

UIS will work with WinX, but not when WinX is installed using GEMRAM. You need to use ROMSPEED instead, which has kindly been made public domain (or is that shareware?) having previously been sold as part of OUTSIDE, the virtual memory package. Romspeed is now in FTP archives everywhere, or at least it was last time I looked.

Hi Roger,

that's the normal behaviour of the TU net.
It's permanently overstrechted, as TU-Berlin offers a quite interesting
ftp-site and is routed via a 64kbit link.

Try Clausthal or Passau, they own most of the files we have.

Or wait till 1995: We are promised to get a 2Mbit link then. :-)

hope, you find this helpful -thommy

>The GEMulator will run at about the same speed as a MegaSTe when run
>on a 486DX-66.

By and large, I can confirm this. Some things still appear to be a bit slower or quirkier than on a 'real' MSTE, but much of that depends on the particular 486 (speed, cache, display card, etc) you are using. Suffice it to say you will want the fastest 486 you can afford.

>Everyone should realize that there is NO hardware support for the
>ST/STe with the Gemulator, so you can only expect TOS apps to run
>sucessfully.

Don't understand this as most GEM-based apps work just fine. Most of the programs that give the Gemulator problems are arcade games or MIDI utilities, of course. Most utilities and apps I used are OK.

>With the price of used STe's (I just sold a MegaSTe4 for
>$250) there is no reason to get one of these items UNLESS you want to
>run Calamus or something on a PC at work.

Well, personally I would _love_ to have a single 'box' be able to run all the applications I like to use... ST, DOS, Windows, Mac, etc, but only if there were NO performance or compatability tradeoffs involved. The Gemulator and Spectre GCR work very well but the truth is that most emulators are seldom as good as the 'real' thing in all aspects and don't always represent the most cost effective solution. Even so, there are indeed valid reasons for desiring emulation.

Good advice, Donald. Here's another one. When replying to a message, please
do NOT include the original poster's .sig info. We already know who the
original message was from (due to the 'reply' line) so why waste bandwidth?
This is especially true if the original poster's .sig was overly huge to
begin with. Please keep in mind that some folks have to pay for their
access to the nets and all those extra bytes add up to more expense.

Cheers,

-Hutch- @ Fair Dinkum Tech

Edellisess&#65533; artikkelissa thommy@cs.tu-berlin.de (Thomas Bahls) sanoo:
>-
> Hmm, I think that the Soundblaster -um- 16bit Two (I can't remember
> the official name- sorry for this) can do this:
> It has a DSP it's capable of 16bit stereo.
> Doom supports this sound card.

```
The Soundblaster 16 ASP. The card only samples at 44.1 KHz, and the playback
rate is the same. It only has 2 channels for stereo, so we need the DSP
for mixing and playin samples, it doesn't have proper AD/DA converters.
In Sounblasters before this they had to use the machines main processor.
The DSP can do voice recognition, but the DSP is crappy compared to the
Falcon's DSP. The existence of the DSP in the Soundblaster is purely for
mixing purposes, because there is no other processor doing this. This
cadr would have a hard time doing 8 channel D2D recording and mixing, and
with no proper sample editing features it definately looses to the Falcon.

S>all SCSI drives must have the parity turned off. Can anyone suggest
S>how to turn this off as the drive has only Drive ID pins and no parity
S>pins. HELP!!!

Give ICD's BOOTFIX.TOS a shot. The program _can_ turn off parity on some
drives. You have to do this with a *host* that _can handle parity_, though.

Some ELS-drives cannot be configured to work without parity!

Try 'FORTUNE'. The latest version (1.1) will be available in a few day
at ftp.uni-erlangen.de and other typical places. We have included
command line use now.

>Mac-Assembler editor. The emulator was so rushed, and so under-manned
>(1 person did it), that the approach he took was to emulate code generated
>by one of the only two official c-compilers used by developers.

First off, this thread belongs in comp.sys.mac or something. Second,
you have heard wrong. The emulator works quite well. It is not
a "C" emulator or whatever. Let's just say MacPaint 1.0 works on the
PowerMac's 68k emulator, Ok? I don't even think they had MPW C back
then.

The emulator is a 68LC040 emulator that is loaded IN IT'S ENTIRETY into
the PPC cache. If a 680x0 program is run, the binary is decoded instruction
by instruction and run through the emulator. Since 90% of a Mac program
is Toolbox calls, any Toolbox calls that are encountered (i.e. it checks
for certain TRAP instructions) are done through the system software.
Now, as more and more of the system software is ported from 680x0 code,
the Toolbox calls get faster, and consequently, the emulated programs
(or any program for that matter) get faster. Right now 10-20% of the
Toolbox is native (don't quote me on this figure, I don't remember exactly)
and that's all time critical stuff and since System 7.5 is going to be
released in 1995 some time, I would think the PPC version will
contain ALOT of native code.

BTW, what do you mean by "C" emulator? Last time I checked only
BINARY code was distributed. If an emulator is going to do anything,
it had better do something about things like "move.l -(sp),D3" and
not "if (c.code != asm.code)" :-)

>But this is hearsay. The FACT is that Apple has brought in nothing to
>emulate FPU calls, nor due they plan to. This meant that right out of the
>box, NONE of the cad programs, modelers, or rendering packages I tried
>would work. (This was of the program's choosing, of course.)

That's because anybody in his right mind would rather NOT try and
emulate an FPU when the code can be recompiled to Native. Native code
using the PPC's math would absolutely make FPU code for a 68882 look
like snail code.

If you buy a PPC for math performace you run native stuff. That's
a no-brainer. And since PPC development environments like Metrowork's
Code Warrior are wide spread in the developer community, esp.
professionals, I wouldn't be suprised if you saw those "non-functional"
CAD packages running on lightning speed native code within the
next few months. Just a recompile and some hand optimisation.

>ALL of them said they would NOT run without an FPU, and of course, the PPC
>doesn't use one. So here's a very significant problem as it effects most
>68K power user applications! And this info is first hand, NOT hearsay.

The EMULATOR doesn't have a FPU because it's emulating a 68LC040. The
PPC doen't need a math co-processor for floating point because it's
so damned fast at floating point!

>advice they had was that they had heard of a software patch that was many year
>old, used specifically for fooling programs into running on Macs without an
>FPU. They recommended emulating that program first. Unfortunately, my chance
>of finding such a hacker tool are nil.

Uh, this is called a Software FPU and it is easily available at any Mac
Archive site with any kind of software. Like archive.umich.edu,
sumex-aim.stanford.edu, and archie.au just to name three. Now, granted
this is a little slower since the Emulator is Emulating an FPU, but let's
face it, if you needed serious performance you would seriously consider
upgrading your software which I would imagine would be provided from the
company who makes your CAD package. What's the point in having all that
raw PPC Math energy if you're going to lame about it and run 680x0 math
based software. That's why Wolfram made Mathematica for Native mode!

>BUT this is not about MACS, other than to point out that the emulation is by
>no means complete.

Well, I would say for the moment it's not to shabby.

If you want REAL facts, check out Inside Macintosh: PowerPC System Software
and Inside Macintosh: PowerPC Numerics. These are programming reference
manuals from Apple and they tell you EVERYTHING you need to know (or not)
about the emulator and the Numeric systems from the ground up.

I am *extremely* interested in Civilization and the questions you raise. Please reply *only* to:

s.lyster@genie.geis.com

not to this e-mail address. I have noticed the "disk-read" bug as you mention it, and am a little pissed-off at the retailer who sold it to me *knowing* about the bug. As of this writing I know of no fix, but the retailer hinted that MicroProse might have a fix in their possession. (You are far closer to Gloucestershire than me!)

BTW - I run Civilization on a Falcon030, which will run the game with either Backward, or with the Falcon SX Desk Accessory - which bioth slow the Falcon to 8 MHz, and uses an ST style bus. Both 16 MHz and the Falcon Bus bomb the game.

I'd like to hear from you!

Stuart Lyster
s.lyster@genie.geis.com

> with a SyQuest)

I don't think that people working on high quality sound samples will want
that they get mangled by the (lossy!) MD audio compression.

>- the MiniDisk data medium (120mb) will cost ~50DM
> a SysQuest (115MB ?) will cost 150-200DM (i'm not shure about the
>SyQuest-prices)

Syquest: 128 MB, ~ 130 DM. But around five times faster. And the drive
is less expensive.

>- the discs are little

I'd say that 3.5" is small enough.

This doesn't mean that MD couldn't get interesting. But (1) it has to be
available and (2) the prices for the drives must come down.

> capable of processing one 68K instruction in 5 cycles
> for a 386 and in 3 cycles for a 486. This means a 486/66
> should give roughly 22MHz 68000 speed.
>

I doubt its that fast. I have LOTS of doubts! 3 cycles? The 486 is
fast but not THAT fast. They aren't taking something into consideration
in that figure, and 22Mhz is just plain not possible. Maybe 16 .. likely
closer to 12.

> The GEM Bench stats supplied were for a 486DX33 and none of
> benchmarks was worse than 108% of a standard, non-blitter ST.

A non-BLiTTER ST? a TOS 1.0 slowster? Big fat hairy deal. How does
it compair with my AdSpeed equipped STE with BLiTTER and NVDI? I'll tell
you, pure math is tiny bit faster but everything else is slower, especially
graphics.

>
> If NVDI can run on top of that, then the speed should be
> pretty hot.`

You can run NVDI on your ST .. so that is dumb comparison.

>
>2) Parallel printing is available from the PC port.

Ex-squeeze me? I thought I had a parallel printer port around here somewhere
In fact, I can multitask printing - much better than Windslows does too.

>
>3) Gemulator supports up to 8Mb RAM, and is capable of partitioning
> down to 512Kb. Think of the RAMdisks!

GOOD! You'll need it! You need 8MB to emulate a 4MB ST! RAMDISKS?
Show me a RAM Disk as flexible as RAMFS for MiNT. And a TT supports LOTS
of RAM.

>
>4) Under SVGA, you can access screen resolution of 800x600x16 colours
> (apparently VERY nice for Geneva).

Under a TT you can get 1280x960 and if you get a VME card, even higher.

>
>5) All Atari-format disks supported.

Not MINIX! And while overformat may be supported, I bet I could do a
Twister format that would screw it up. And copy protected games are NOT
supported.

>
>6) PC serial port supported with the usual TOS-based problems.

Wait a minute. The PC serial port system is in MUCH worse shape than the
ST. And on the ST its partly a hardware problem so it SHOULD be fixed
on the PC. PCs just have some bare hardware with NO software support for
the things we take for granted. There are no OS calls that turn on or
off RTS/CTS. And port settings go to 9600 (not 19200) through the PC BIOS.
Your better off with an ST - or better yet a TT.

>
>7) Sound support via Soundblaster card.

Only the Yamaha sound, which is FM modulated square wave with effects
oscillators. Show me STe DMA sound .. or better yet, Falcon sound.

>
>8) Will run under WOndows 3.1 or OS/2 2.1 or MS-DOS or DR-DOS.

No .. its a DOS program and uses MS-DOS. Its the worst OS in the worls.
Windows and OS/2 run it in a DOS box.

>
>9) No cartridge port or mose plug, therefore no place for dongles.
>
>10) No MIDI support (yet, maybe).
>
>My own mutant ST is on its most recent set of last legs and I don't think

>and my desire to finally be compatible with my workplace. This Gemulator
>thingy is encouraging to say the least. I am no longer faced with the
>onerous task of replacing my cheap-and-friendly ST software with hugely
>overpriced Windows packages.

When you buy a computer, first find the software you want, then buy the
computer that runs it. Don't buy a computer that everyone else has and then
emulate the computer you really wanted. You'll hate yourself for it.

>
>The only thing I didn't get from this article is a price. I gather it's
>somewhere around the 200-Pound mark in the UK. What is the Canadian price
>and does anyone have a North American address for Branch Always??
>

Software is supposedly shareware, although the hardware needed to use it is
commercial. I wish I had the software .. I'd like to play around with it.

>

You could, but.... You forgot that with the GEMulator you can use you PC
hard drive, and the faster comment isn't necessarily true. With my 486DX/33
I can emulate an ATARI 1040 ST at ~150% speed. I can also use all those nice
TT resolutions. It's really quite pleasant to work at 640x480 in 16 colors.
Another nice thing is that since the 68000 chip is emulated, as I move to
a faster PC my Atari emulation speeds up (can we say PENTIUM and POWER PC :))

But most of all, I only need one machine on my desk, and I don't have to
reach to the right of my machine every time I want to insert a floppy.

BTW, The Spectre GCR was nice in it's day, but if you want to run today's
Mac software, you really need a fast color Mac.

Bzzzzt! Move to the end of the line! The Gemulator emulates ALL the hardware of the ST. Yes, that means that illegal things, such as direct hardware peeks and pokes work just fine. I run many pieces of software that do direct screen access that not only run, but in many cases run faster than my 1040ST.

Obviously you have never seen/used a gemulator or you would not have made such a remark. A used ST/STe may be cheaper, but I already have a PC, and given Atari's past markteting performance in their computer line, I prefer not to invest any more money in Atari specific hardware. Besides, as I upgrade my PC, my emulated Atari gets upgraded to. How's that for killing two birds with one stone?

It does. IMO, we need to sort out the keyboard shortcuts. Some are well
defined, but others are a real mess. I guess the list in the Compendium is
a good starting point.

I hear people raving about X-wing, Tie, and the enhancements left and right.

It would be a shame if the Intel remains the only platform for this. The Jaguar is probably BETTER suited for texture polygon animation than an Intel box.

You could easily do a CD-ROM and have several dozen missions on them, and combine X-wing and TIE together so you can be an X, Y, A or B wing or the various TIEs.

I guarantee you such a CD would make the Jaguar CD system the #1 console in the country overnight.

Of course, the CD isn't out yet, but X-wing is also doable on a compressed CART I'm sure.

According to my information the ST version doesn't have texture mapped
3D graphics, the PC does. There are more colours in the PC version too.

Hi all,
I'd like to know if there's an email address to the guy
responsible for the Freeze Dried Terminal program. There's a
few questions I'd like to ask him before I consider buying the
prog.
Also, are the demo versions meant to lock up when you're
using them? It doesn't say much about it in the docs.
Please email me a reply if possible.

Regards,
Hamo

No DSP and only 50 KHz. Not very easy to do the stuff the falcon is capable
of with a card like that. If you are talking about the GUS, I have yet to see
a professional using GUS for D2D etc. The GUS has only 8 bit sampling (well
you can get an extra device ofr sampling at 16 bits).

1983. GRAPHICS PROGRAMMING ON ATARI'S

Newsgroup: comp.sys.atari.st
Date: 1994-04-30 01:49:00 UTC
From: <>
Message-ID: <2psdec$p8i@mother.usf.edu>
Source record: 188010
Cross-posted to: alt.games.doom,comp.sys.ibm.pc.games.misc,comp.sys.amiga.games,comp.sys.atari.st,rec.arts.startrek.misc,rec.games.chess,rec.games.video.nintendo,rec.games.video.sega,comp.sys.mac.games

Well, back on the subject of the interleaved bitplanes on the Atari, one of the most INEFFICIENT things you can do is plot a single pixel. (That's true for many machines, actually, but even more so for Atari.) The following is the most generic pixel plotting routine I could possibly write while watching TV. It can handle any screen size (word width is the number of pixels across / 16) with any number of bitplanes, and the one test I made worked just fine. I was a bit slow though (I will write a span plotting routine later), so I was wondering if anyone could optimize it. For anyone else, here is a routine that plots a pixel, overly commented, and ready to be assembled by Lattice C and linked into your C program. Enjoy.

Oh, and if you notice the part where I divide by 16 then multiply by two, don't bother. I know what you're thinking. The only other way to do it is to shift right by 3 then and off the low bit. Too slow. Also, adding a register to itself is faster than left shift by 1. BTW, wanna know the best way to clear an address register to zero? Subtract it from itself. :)

```
CSECT text,code
XDEF _plot

scr EQU 8 ; 4 Screen memory
x EQU 12 ; 4 X coordinate
y EQU 16 ; 4 Y coordinate

>monitor.

I think I had to do the following (when I was messing with Winx):

-boot up to the desktop (load UIS III near the end of the AUTO folder)
-*before* you load anything else, re-run UIS_III.PRG from the desktop

...that should be it (I think I remember it right - I only messed with
Winx under MiNT, so that may also have an effect); anyways, UIS_III.PRG
had to be the *first* think loaded from the desktop...

Lemme know if that does indeed work as I remember...

1985. discrimination in the workplace...

Newsgroup: comp.sys.atari.st
Date: 1994-04-30 02:40:34 UTC
From: jpowers@cs.oberlin.edu
Message-ID: <JPOWERS.94Apr29224036@csxt.cs.oberlin.edu>
Source record: 187856

My name is Josh Powers and I'm a student at Oberlin College.
I am presently doing research on discrimination of gays, lesbians,
and bisexuals in the workplace, particularly in computer science
related fields. I am requesting information from anyone who is
willing to offer it. Tell me an anecdote, a history of your
experiences... you can even write about the experiences of another if
you are certain the story is true. Also, I'm not only looking for
evidence of discrimination - any positive stories are also welcome. I
am enclosing below a list of questions which I would like respondents
to answer - in order to help me organize my research:
1. What is your age and sex?
2. With what racial or ethnic group do you identify?
3. How do you define your sexual orientation?
4. What is your religious affiliation (if any)?
5. What is your marital status?
6. What city and/or state do you live/work in?
7. Who is your employer? Do they have a non-discrimination
policy which includes sexual orientation?
8. What is the size of the office you work in?
9. Are you out at work? If yes, to whom and in what context?
Do you believe you are more vulerable to being fired
as a result? If no, what do you believe the
consequences would be if your sexuality were revealed
at work?
10. Are you aware of any lesbian/gay/bisexual coworkers?
11. Have you experienced any instances of overt homophobia?
If yes, please describe them.
12. Have you experienced instances of covert heterosexism
(for example: the assumption that you're straight,
questions about wife/husband, attempts to set you up
on dates, etc.)?
13. How often do people at work talk or joke about sex?
14. Do you attend social events involving your office
members? If yes, how do you handle your sexuality?
For instance, do you feel comfortable bringing a
member of the same sex along as a date?
15. Please add any additional comments, suggestions, stories
which you feel would be helpful.

I can ensure complete confidentiality. You may either e-mail or
snail-mail your responses. I would also be happy to do a phone
interview if you e-mail me your phone number or call me.
Both of my addresses and my phone number are printed below.
In advance, I thank profusely anyone who responds. If you would like,

I will send you a copy of my finished paper.

1986. Re: Calamus SL (was Re: Serious ST mags). Also Atari Works.

Newsgroup: comp.sys.atari.st
Date: 1994-04-30 02:40:52 UTC
From: Graham.Irvine@mettav.royle.org
Message-ID: <767672930.1@mettav.royle>
Source record: 187855

It was none other than Roger Sheppard. that wrote on 25 Apr 94 that ,
>> Frontier: Elite 2 just hit 230,000 units sold on the Atari alone.
>> Please quote sources when you claim things like this.
RS> I also here that the PC version is far better...!!

And of course this comes with your 'Fact not Fiction' stamp of authority ?

If you refer to gameplay ..WRONG exactly the same. Anything else is largely irrelevant to all but the shallow . you PLAY games not sit back admiring the wonderful still graphic's.

RS> This has now stoped do to the lack of new games, facts not fiction,
RS> also UK mags have very little reviews of New Games in them facts
RS> again..

You are fast becoming the John Major of this newsgroup with this 'Fact's' tag you insist on adding to your opinion's . Do you feel your argument's are that weak that you have to back them up with this ? The fact is they largely are ....Fact not fiction :-)

You are one strange dude ,you obviously use Atari computer's at least I guess from some of your other messages but you seem to have not respect for them whatsoever ? What gives ?

RS> I can get a TOP 486 with all bells etc for 1/2 the price than a basic
RS> Falcon cost here, plus I get all the software and support I need..

So why don't you ? This newsgroup is supposed to be for discussion of Atari computer's and I for one am not interested in what other system may suit YOUR need's . I have my need's and as I feel it is best served by Atari computer's I read and write here .... If that is not the case with you then either ship out ....or else shut up (at least as far as this type of totally inaccurate wibble about PC's) ! I read several other messages that you write and when you refrain from pointless drivel like above you strike me as a very knowledgable user ,stick to that :-)

RS> No ! no one can kid me that the Falcon is the way to go, unless you
RS> are mental..

Seem's to me you are just trying to justify not buying a Falcon <G>

If you are not happy with Atari and Atari computer's WHY do you remain here ? Speaking from a personal point of view there are some of us in here that are perfectly happy with our machines and do not need or want to read any of your personal axe grinding thank you very much !

///

1990. Lynex Sampler

Newsgroup: comp.sys.atari.st
Date: 1994-04-30 04:34:35 UTC
From: ms20@u.washington.edu
Message-ID: <2psn4r$qip@news.u.washington.edu>
Source record: 187860

I'm posting this for a friend without usenet access:

Subject: Lynex Sampler ... Software wanted!

Hi,
I've recently been *given* a Lynex sampler for the Atari ST, on
the grounds that `If I can get it working, I can have it...'.

Its a stereo sampler with 8 outputs that connects to the cartridge port.
It is software-controlled, and can be (apparently) used from within CuBase.

One snag. No software! If anyone has any experience of this thing,
and/or the software necessary for it to work, I'd be *most* interested.

I really need the software in order to get anywhere with it!!

Thanks in advance,

john..

P.S. Please E-mail me at:

jat@ohm.york.ac.uk

Since I have no news access, and this is being posted by a friend...

These are old phone numbers; they were changed after the quake. One of
their programmers, Stefan Daystrom, gave me (via Compuserve) these:

voice 310/455-0171
fax 310/455-3072

Their BBS number is the same as before - 818/906-7659

You'll mostly like get their answering machine.

Hope this helps.

Phil

A good source is to look at Mac keyboard short-cuts since Apple has been
'enforcing' interface standards for donkey's years.

Cheers

1994. Atari Ispell uploaded (including german.med)

Newsgroup: comp.sys.atari.st
Date: 1994-04-30 09:22:47 UTC
From: c0031098@ws.rz.tu-bs.de
Message-ID: <1994Apr30.092247.24337@ibr.cs.tu-bs.de>
Source record: 188049
Cross-posted to: comp.sys.atari.st,comp.text.tex,de.comp.tex

Due to public demand I'm releasing Ispell 3.0.09 for
Atari in binary format.

This upload contains an experimental german dictionary with
about 2000 words. It is to be maintained for at least the next year
with 2 monthly updates by me.

There are three differend files:

ispell.zoo The binary of ispell and buildhash, including
manpages, but no docs. (get the source)
ispell-eng.zoo an English dictionary
ispell-ger.zoo an experimental German dictionary

The dictionaries work on every computer, the binaries only on
Atari ST/TT/Falcon. (Not tested without MiNT)

This files will apear at
ftp.uni-paderborn.de
ftp.tu-clausthal.de
a.a.u.e (if i get through)

This is the readme file from ispell.zoo

Ispell readme

This is the binary distribution of ispell 3.0.09.
The original Source can be found on any GNU archive,
patches for Atari ST are included in update30.zoo.

This distribution comes almost without docs!

The information supplied with the source are mainly concerned
with creating a med file using the munchlist script. Since
you get a med file in ispell-eng.zoo (ispell-ger.zoo) you don't
need to know this.
(If you want to do it on your own get the source, it contains lots
of utilities needed to do that)

How to use ispell:

1. You have to generate a hash file:
buildhash english.med english.aff english.hsh

2. You have to copy it somewhere convenient
cp english.hsh /usr/local/lib

3. You have to tell ispell where the hash-file is
export DICTIONARY=/usr/local/lib/english.hsh

4. If you are working on a minixfs, ispell will generate
a file .ispell-words in your home directory

4a. If you are not working with minixfs, be sure your
HOME environment-variable is set to your home directory.
Tell ispell to generate a file ispell.wrd instead of
.ispell-words
export WORDLIST=ispell.wrd

5. start ispell using
ispell <filename>
Ispell will complain that there is no file .ispell-words
(ispell.wrd). Ispell will show any word not recognized and
give a number of correction.
Type h to get a list of available actions.

6. Share and enjoy

Traps and pitfalls:
Ispell is a UNIX(TM) programm! It expects lf line termination,
not cr lf as used in MS-DOS. When editing a med-file or
wordlist be sure to save without cr!

Multi-languages-support:
Ispell is able to suport many languages, but only one at a time.
Using
ispell -d /usr/lib/german.med
will correct a german text.

Composita:
In many languages it composita are build without hyphen. To prevent
ispell to generate a warning and a correction with hyphen use the
-c option.

Internal things (may interest nobody:-)
This Version is compiled with GCC 2.4.2 and mintlib PL 39.
It has full 8 bit support and 64 MASKBITS. (32 would have
been sufficient in most cases but since you can't change
it i have decided to use this larger value. I'm sorry that this
decission will decrease the speed but you will thank me if you
get an aff-file which needs 64 MASKBITS)

Typing this I read that ispell 3.1.5 is released, maybe I should
take a look.

The following is in german. If you don't understand it, you
don't need it.

Dies ist die versprochene ausf"uhrbare Version von Ispell 3.0.09.
Die originalquellen sind auf jedem GNU Archive vorhanden, Patches
f"ur Atari befinden sich in update30.zoo.

Diese Archive enth"alt au"ser den man-pages keine Dokumentation.

Da die Informationen aus dem Originalarchiv nur dann sinvol sind,
wenn auch alle anderen Dateien vorhadne sind, habe ich darauf
verzichtet.
Zum automatischen Erstellen eines med files sind sie aber notwendig.
siehe dazu ispell-ger.zoo.

Kurzanleitung:

0. In deutsch.aff die nicht ben"otigten Codierungen (z.B. f"ur
nroff) auskommentieren. Die Umlaute an den Zeichensatz des
eigenen Rechners anpassen.

1. Erzeugen eines hash-files:
buildhash german.med deutsch.aff german.hsh
(Dem Originalquellen liegt ein german.aff bei, dieses
vertr"agt sich nicht mit dem von mir verteilten med-file.
eine Konvertierung ist m"oglich, aber nicht auf einer Atari,
zu wenig Speicher. Au"serdem ist es fraglich, ob das sinnvoll
w"are)
2. Kopieren des hash-files an einen sicheren Ort
cp german.hsh /usr/local/lib

3. Ispell mitteilen, wo das *Standard*-hash-File liegt:
export DICTIONARY=/usr/local/lib/german.hsh

4. Auf einem minixFS wird eine Datei .ispell-words im HOME-Verzeichnis
erstell.

4a. Auf einem TOSFS w"aer das nat"urlich Unsinn, also einen neuen
Namen daf"ur vergeben:
export WORDLIST=ispell.wrd

5. Ispell aufrufen:
ispell <dateiname>
Ispell wird sich beschweren, da"s die Datei .ispell-words/ispell.wrd
nicht existiert. Beim ersten Mal ignorieren. h liefert eine Liste
der m"oglichen Aktionen:
Zahl 0... Falsches Wort durch Wort Nr. Zahl ersetzen
A Wort f"ur diesen Durchgang als richtig anerkennen
I Wort in die Datei .ispell-word aufnehmen
U Wort in die Datei .ispell-word aufnehmen, nur Kleinbuchstaben
X Verlassen, "anderungen abspeichern
Q Verlassen, "Anderungen nicht abspeichern
H Hilfe

6. Weitergeben und damit Freude bereiten.

Haken und "Osen:
Ispell ist ein UNIX-Programm! Es erwartet Zeilenenden als lf, nicht
wie unter DOS/TOS cr lf. Also beim Bearbeiten der med-Dateien und
der WORDLIST aufpassen.

Mehrsprachigkeit:
Ispell unterst"utzt meherere Sprachen:
Durch den Aufruf
ispell -d /usr/local/lib/english.hsh <dateiname>
kann zum Beispiel die englische Datei gew"ahlt werden.

Zusammengesetzte W"orter (Komposita)
Ispell setzt aus W"ortern des W"orterbuches neue zusammen, h"alt
aber jedes mal mit einer Meldung an. Die Option -c l"a"st die
Bildung von Kompositas (-ten?) zu und erzeugt keine Warnung.
Dadurch k"onnen z.B. die W"orterb"ucher kleiner werden.

Internes:
Diese Version von Ispell wurde mit GCC 2.4.2 und der Mintlib PL 39
kompiliert. Sie enth"lt volle 8-bit Unterst"utzung und 64 MASKBITS.
(Der german.aff ben"otigt 64 MASKBITS) Dadurch wird Ispell leider
etwas langsamer:-)

Die aktuelle Ispell Version ist 3.1.5, wenn ich Zeit habe werde ich
sie mir mal ansehen. Bis dahin hat das german.med absoluten Vorrang.

: I just hear from a Amigahead that Commadore was bought recently by HP.
: Is this true? I guess that means the Amiga is dead and that we should all
: rejoice that Atari is still alive and kick'in.

: -- Paul

i don't think HP will buy someone who makes 68k Computers,
they gave up the 68K line some days ago and they are using
PA-RISC now.
The new 712 (Gecko) is faster *and* cheaper than the old
433 (68040 33MHz).

I don't think we should rejoice if Amiga dies. Both
Atari *and* Amiga are endangered species (sp). Look at the
other 68k computer systems:

Apple moving to MPC 601
HP moved to PA-Risc
SUN moved to sparc

(KAT-Ce, alive and kicking, but in another universe (Embeded Controller))

We are the only one left. (And in danger of being moved to /dev/null)

Our problem is not the Amiga 1200 or 4000.
Our problem is
Atari Mega STe 8 (14)
Atari TT
Falcon 040

And of course lots of masochistic MS-DOS/Windows users.

And one final point:
Without the Amiga 3000 (and 4000) there would be no Linux 68k-Kernel.
And no Atari-Linux!

Just my $.02

The original machine wad indeed to be used as a NetBSD machine, and
was on the net as tirnanog.morris.org. Since I lost sysadmin privs
at that site, I shut the machine down and took it home with me.
I see no reason to remove the heavy duty stuff :)

I saw with my own eyes mint 1.10 compiled in 10-11 minutes on a stock
mega ST/4 with a 100 Mb conner disk. However, the compiler was pure C.
All the source code was on disk - no ramdisks were used.

> flight of the good old Elite I Cobra Mk III. I guess the autopilot
> drives you into the ground because it goes straight to the target and
> the planet surface is curved. Anybody ?

There's a slight "feature" in Elite2 which causes this, Nick. What you have to do is to put the time control icon on nearly the maximum setting as you get near the planet. Of course, I am assuming that you are attempting to land at a base on a planet - the autopilot won't land you on a barren planet. :)

One thing that you might be doing wrong is attempting to land on a ship instead of the base. This is done easily at an orbiting station where you _think_ you clicked on the station itself but in fact clicked on one of the approach markers or a stationary cruiser.

Keep trying... it _IS_ possible to land.

> Any other hints ?

I started by trading illegal animal skins from Ross 154 (Merlin) to Barnard's Star (Birmingham World), and returning to Ross 154 with at first Computers and then Robots.

Not managed to get to Phase 3 yet - I'm stuck dreadfully on Mission 8 Phase 2 where I know I have to get to that fixed gun to blow up the soldier-spouting buildings but I just can't blow them all up before getting killed. And if I go and kill all the bazooka chaps then there are too many soldiers around for me to get to the gun! :(

Cannon Fodder is a commercial game (where a 4 level demo appeared on ST Format's coverdisk last month) from Virgin.

> Eric's original approach to running TOS programs was much better from a memory
> saving point of view.

This is true, and on my 4M Ste memory seems to dissappear VERY quickly (I think
my background picture of Tori Amos isn't helping much :-)) If I had a Falcon or
TT with lots of RAM and virtual memory I wouldn't care though !

> >After running miniwin the total free memory drops - I'm checking this using the
> >"Desktop Configuration" menu option under MultiTos. I've lost upto 50kb each time
> >I run miniwin !
> >
> >The same also happens with Toswin (Warwick Allison's version) which I just compiled
> >last night.
>
> Install RUNTOS.PRG as the TOS running application, and run TOSWIN.APP
> (Warwick's version) from the GEM.CNF file - this cuts memory overhead
> quite a lot.

As I said, I've had a go with Warwick Allisons version of Toswin - which I must
say is very good (as is Erics original), particularly the extra cut/paste stuff.

[waffle about minix FS - which is EXCELLENT BTW - deleted here]

Any way back to my original question .....

I'm not sure I was very clear, so I'll try again ...

miniwin/toswin do not seem to be returning all the memory they use to the system
after they quit, e.g. if miniwin uses say, 200kb, after it quits it only returns
about 150kb.

If I carry on running *and* quiting miniwin's the free system memory just keeps
getting less and less :-(

Any ideas ????

Thanks in advance for any help.
Bye for now,

Andrew.

> Can someone provide pointers to some kind of beginner's guide to MiNT?
>
> What it is?

* MiNT - Acronym: Mint is Not TOS. Well actually it is TOS now since it is used as part of MultiTos (MultiTasking TOS).

* MiNT was written by Eric Smith and the source code is publically available (via anonymous FTP, etc) - the binaries up to about version 0.97 are also PD.

* MiNT is a multitasking replacement for TOS

> What it does?

* MiNT allows you to run several programs and to share the processor/disc/memory between them.

* MiNT also provides UNIX-like facilities such as pipes, semaphores, shared memory loadable device drivers and filesystems, process priorities.

> What it works with?
> (What it doesn't work with?)

* Most things will work with MiNT, mainly 'cos they don't know it's there ! There are lots of programs that are specifically written for use with MiNT and make use of its facilities, eg command line shells (bash,tsch, ksh, etc), loadable filesystems (minixfs - have a UNIX filesystem on your ST !) .....

* badly written programs, ie ones that don't follow the proper guidelines and do nasty things to work, will probably fall over if MiNT is there.

> What it needs to run?

* MiNT will run on any Atari ST/TT/Falcon, but you need a few mega bytes of memory for it to really be any use

> Any information that gets me some orientation on the subject would be
> much appreciated

I hope my waffle is some help, if you have any more questions fell free to e-mail. Hopefully you'll get a few awnsers to your questions so you should be able to pick up some idea of what MiNT is all about.

If you ftp the MiNT source or binaries (mint095b.zoo in /Mint from atari.archive.umich.edu) the readme file will tell you about MiNT in the words of the man that wrote it !

Bye for now,

Andrew.

You know, if Darek Mihoka put his mind to some good, he could write some really good Mac and PC emulators for the TT and Falcon. They're much faster than the ST's, so, they could do a decent job of emulating the other machines. I'm sure that Darek has rewritten some of the ST's OS in 386/486 native code to speed things up, so he could do the same with the BIOS for the PC emulator. And then the Mac emulator would get a decent screen mode on the TT and Falcon (even more on the Falcon... and, of course, he should support screenblaster). I realize that the money for writing emulators for the Atari wouldn't be as good, unless they were majorly kick-ass, but at least he's be writing a truly respectable product. If there were a decent PC software emulator for the Falcon that used whatever 68030 optimizations were necessary, I'm sure one could get decent speed, especially if the BIOS and Windows drivers were written in native 030 code, where they'd be faster than on the PC anyway.

Is there anyone in England that could give them a call and see if there is patch available? I know that it's useless to try to get any info from the US out of them. The US office refers you to the UK office and the UK office won't talk to you because your from the US and should of course be talking to the US office.

If that doesn't work maybe we could track down the person who fixed the bugs in the pirate version and get them to make an unofficial patch for the game. There were a couple of files like that years ago for Falcon (the Flight SIM). That way we could freely distribute the fix without breaking any laws or ethics.

I'm the one to blame for making Llamazap available in the /Falcon
directory. It was uploaded to a.a.u.e. and when I extracted the
included text file, it appeared as if Jeff Minter was saying this was
a demo version in which the sounds had been disabled. Based on that,
I cleared it for FTP.

I was duped. And it would seem that one of Jeff's beta testers is
less than scrupulous...

>

"adaptive prioritization" as far as I can gather means that the priority of a process is altered depending on what it is doing.

For example I use zoo - when this is running it obviously does alot of disc access to save/load files, MiNT drops zoo's priority while it is waiting for files so that other (lower) priority processes get a chance at the processor.

I've actually 'watched' this using the 'top' utility, and sure enough the current niceness (priority) goes down and up (can't have higher priority than it was run with).

MultiTos IS slower than TOS - not suprising really considering the amount of stuff it does - IMHO MiNT/MultiTos is really like a mini UNIX implementation !!

Also, as someone pointed out a bit ago (sorry can't remember who) the AES from GEM.SYS causes most of the drop in performance since it waits in a tight polling loop which wastes loads of CPU time - apparently version 4.1 doesn't do this, but Atari haven't got round to officially releasing it yet :-(

[er.... I heard a few people had 'leaked' copies of AES 4.1 for MultiTos .....
.... would anyone like to e-mail me to confirm this, possibly with a uuencode copy ;-)]

Other positive points for MultiTos: loadable filesystems (minixFS, CDROM-FS), device drivers, pipes, shared memory (and other UNIX -like stuff), networking stuff ..... etc

Okay, the defence rests :-)
Bye for now

Where does GEM fit in all this? I think of it as a layer on top of TOS.
Does it (and desktop managers like the default or TeraDesk) have a place
in a MiNT configuration?

(If it matters, my main interest is a platform for TOS and GEM program
development; I currently use TeraDesk + Gulam + GCC and am trying to
discover whether there's a reason I might wish to change.)

2027. Lazer & rainbow not working for me

Source record: 187890

Aaron Hopkins, the author of Freeze Dried Terminal, does not have an email address. You should send any correspondence to the address he lists in the doc file that accompanies FzDT.

Aaron is still working on v2.30 of FzDT, according to what he said the last time he spoke with ATARI UNITED!. However, he is working a 'real' job and trying to play student, so his time has been rather limited. When he gets v2.30 finished, it will be released via the usual shareware channels, but the registration and limited support will be handled by ATARI UNITED! SoftWareHouse instead of Aaron personally. Details about that will be included in the distribution file.

Aaron promised to send me the key making program, so I could build keys for individuals who hadn't received them previously, or for new registrants. In fact, he's promised that a couple times. I still don't have it. But, when I do get the necessary software, I'll post something here, as well as release something to the media.

From: raver909@epicycle.lm.com
Message-ID: <2pufcq$p2k@epicycle.lm.com>
Source record: 187888

Ok, I have a regular old 1040STf with both monitors, no hard drive and a 2400 Bps modem. TOS 1.0
What I want to know is what should I buy to completely "max-out" my ST in terms of memory, speed, etc. I also need to know what the relative US price of this would cost. An itemized list is baasically what I am looking for. Also indicate if I can find the stuff new or have to get it used (eg: it is no longer in production and no one caries it).
Basically with all this talk of Multi-tasking and other goodies I have gotten biten by the upgrade bug. I however anm wondering if it would just be more cost effective to sell the ST (but not the monitors) and get a Mega4ST or Mega4STe. Can ya point me in the right direction?

CG> To summarise Andreas' problem in English: in 256- and ``True''-colour
CG> modes he gets glitches when replaying samples or unpacking GIFs from
CG> his LPS240 SCSI drive. The resolution dependency suggests to me that
CG> this is something timing-critical (the Falcon runs a -lot- slower in
CG> these modes).
Hmmm, i've got a relatively new Falcon (TOS 4.04) and am experiencing problems in 256/TC modes when reading files (not just pictures or samples) on both my Fujitsu and Maxtor SCSI drives.

After playing around with termination of the devices, a new drive cable, re-configuring the Maxtor so that it no longer has parity enabled, different PSU etc the problems have gone away!!!

The last change I made was to put ICD Pro 6.5.1 on to my system, perhaps this was the fix that was needed???

```
====================
Install RUNTOS.PRG as the TOS running application, and run TOSWIN.APP
(Warwick's version) from the GEM.CNF file - this cuts memory overhead
quite a lot.
====================

RUNTOS should check to see if TOSWIN is running (via appl_find or looking
it up in U:/proc, depending on if you want to use the AES at all) and if it
isn't running ... then it should run it using the proper parameters (won't
TOSWIN take a TOS program as a parameter?) If it is running, then use the
pipe. Hmm .. actually, I guess you could KINDA use the AES from a TOS
program through the ALERT pipe. I wonder if it would be possible to create
an entire GEM program that just sent messages to a "server" through a pipe.
Hmm .. isn't that what X does or something?

It was made available on the archive because of the very reason you uploaded
it (that .txt file does make it sound like a demo version). I have pulled it,
after confirming with Jeff Minter that it is not a distributable version.
Thanks for bringing it up.

2043. ST Format vs ST Review vs ST User

Newsgroup: comp.sys.atari.st
Date: 1994-05-01 00:15:19 UTC
From: am136@FreeNet.Carleton.CA
Message-ID: <Cp3KpJ.Mun@freenet.carleton.ca>
Source record: 187899

ST Review this month published an open letter to ST Format, challenging the latter magazine over some of its claims. ST Format says it has around 80 editorial pages per month, but this figure can only be achieved by including subscripion offers and advertisements for other Future magazines.

As far as I am concerned, it's high time somebody put the boot in. None of my coder friends had liked ST Format, although I had always thought it was the best of the three ST magazines generally available in the UK. Then I bought the May 1994 issue. I may be alone in finding Paula Richards' comparison of piracy to rape rather staggering, but they surely set new standards for insulting readers' intelligence.

Their review of a CD-ROM packed with PD software lists as one of the product's low points, "Needs a CD-ROM drive." And they give one of the "Lows" of PageAssistant - an accessory which provides on-line help for PageStream - is "Only of use to PageStream users." Pretty astounding.

And in the "least helpful answer ever" category, a reader who inquired as to the purpose of C header files was told, "A header file warns the compiler that there are functions and structures held within your program that have not previously been defined." Eh?

If it wasn't for Ed Ricketts' hilarious reviews, I would seriously consider not buying this magazine any more.

ST User's May issue had a gratuitous picture of a girl in a bikini on the front cover. But enough of the good points. "The original ST was based on a Motorola 68000 chip running at 8MHz, but the STE doubled this speed to 16MHz" practically had me in spastic convulsions. At least they don't appear to be reviewing Amiga games this month, although some of the screen shots in the preview of Premier Manager 2 looked a tad suspicious.

ST Review isn't exempt from criticism either. One of the letters on the "Ask The Experts" page, on the topic of computers supposedly capable of millions of colours, ran thus: "I have been trying to see how many colours I could think up but have only managed to come up with just 51 colours, shades or tints. These are: red, blue, buff, fawn, [..]." They printed the entire list! Surely some judicious editing was called for..

Still, ST Review has, in my eyes, displaced ST Format as the best magazine available, and probably did so several months ago although I didn't really notice until now. (ST Format still has the best design and layout of the three.)

Ofir Gal's column about the Internet (in the May issue of ST Review) is also one of the few entirely factual magazine articles I have read on the subject - and a delightfully positive article at that.

Message-ID: <2pv2dt$spp@sol.ccs.deakin.edu.au>
Source record: 187900

Thanks to all who replied to me concerning my Qns about the
Freeze Dried Terminal; I'm taking all opinions into consideration.

Now to the reason I'm writing again; I'm wondering if anyone
has any info on the latest version of the Atari XFormer program; the
8-bit emulator for the ST. I've got a *very* old version of it and
am interested in finding out if there's been anything new added to
it. How well does it run old 8-bit games? I heard that there was
some sort of cable that allows a 1050 disk drive to be connected so
that the files could be ported over more easily; is this true?
Info or contact addresses can be emailed to me directly if
that's possible.

Regards
Hamo

>
> (If it matters, my main interest is a platform for TOS and GEM program
> development; I currently use TeraDesk + Gulam + GCC and am trying to
> discover whether there's a reason I might wish to change.)

If you use MiNT on it's own (I played around with version 0.95) it uses the normal GEM and desktop in ROM, ie MiNT loads, installs itself in some of the trap vectors then starts the GEM desktop (which, in your case you've probably set to load TeraDesk).

However, you can tell MiNT to load another program instead of just starting the DeskTop - so you could choose Gulam. I'm not sure what would happen after you exit Gulam or whatever though - really MiNT should realise where it left off and startup the Desktop, but I don't think it does (never tried this).

You're also meant to be able to run MiNT from the Desktop (sorry should have mentioned before, it usually goes in the AUTO folder) as long as you specify something for it to run (Gulam) when it starts.

There is a utility you can get called Toswin which lets you run TOS proggys (eg command line shells, GCC, etc) in a window on the desktop. Toswin can either be an accessory or .PRG, if you use the .ACC version you can have a texteditor loaded and have a shell in a Toswindow to allow you to compile with GCC (quite neat really).

There is another alternative - Get MultiTos (about 40uk pounds) This has MiNT (version 1.04) providing the multitasking and runs a new, multitasking GEM/Desktop on top (ie doesn't use the one in ROM).

Problems with MultiTos -

* If you're using GCC etc with MultiTos you're gonna need 4Mb. The new GEM takes up a chunk of memory !

* Response is a bit slow - click and wait ! I have NVDI installed and this speeds up screen/window redraws quite alot.

* Some programs that don't mind MiNT may not like the idea of the new multitasking Desktop - again these are badly written. The new GEM allows you to have several programs running with all the windows on screen - bit like Apple MACs - and you can select between them causing their windows to come to the top of the pile. Programs that assume that they own the whole screen (sorry, but that includes Gulam :-( )and don't use windows properly won't like MultiTos.

[The test to see if a program will work under MultiTos that was mentioned in a few ST mags was to open an accessory like the control panel and move it around over the programs window. If the window re-draws all the time then the proggy is well behaved and *should* work under MTOS]

I have MultiTos permanently installed with two 16Mb minix partitions FULL of GNU stuff (GCC, make, bison, file utilities, tcsh, bash, Ghostscript v2.61 - compiled from the UNIX source :-), etc ....) and IMHO it is very good. And if you want to delevlop proggys using GCC it's quite usefull as long as you can put up with a bit of loss of speed AND you have nice MultiTos friendly text editors (I use the Devpac 3 editor - but there is Everest which a friend of mine uses and he says it is excellent) ^
|___ shareware proggy.

Hope this waffle helps, I would suggest that you get some other responses about MiNT and the other MultiTasking operation systems (eg Mag!X) - I'm biased towards MiNT/MultiTos and don't really know much about the others which may be more use to you.

Bye for now,

Andrew.

No, that's not true. Commodore announced on Friday that it has gone
into liquidation, though, so the company is no more. Hewlett-Packard
may buy the AAA graphic chip rights from the trustees overseeing
the liquidation, though (since they were planning on using it in
set-top boxes for interactive cable) -- they'd just have to finish
up the development!

> for English users only?

No, but there are difficulties in getting standards to be used by everyone. It is still very common to see < Load ^L > even in "new" programs instead of the recommended <Open ^O>, and even the best-chosen shortcuts can become a bit cryptic in other languages, losing the whole point of being mnemonic. I don't think this should be pursued to extremes all common to all languages, suffice it that many common functions seem to be spreading to most platforms, applications and languages -- e.g. the almost ubiquious ^C ^X ^V for cut&paste clipboard use.

You need a host adaptor like the ICD Link or similar. In addition, you
need a driver. You could use MetaDOS 2.3 (free), Extendos or CD Tools
(commercial), or if you use MiNT you could try the CDROM.XFS driver.

>
> Could someone post these here? And what then? How do we enforce these?

Okay, some Mac keyboard short-cuts, based on my experience of Mac
software. Strangely enough, they are very similar to the list in the
Compendium. [Cmd = command key, use Ctrl for Atari...]

1) This is set of shortcut are always used.

New Cmd+N
Open Cmd+O
Save Cmd+S
Close Cmd+W (note W for close...)
Print Cmd+P
Quit Cmd+Q

Undo Cmd+Z (but us Atarians have the Undo key...)
Cut Cmd+X
Copy Cmd+C
Paste Cmd+V
Select All Cmd+A
Find Cmd+F

2) This lot is consistent on most Mac software when used... obviously
some applications won't need them and will remap the short-key to
something else.

Information Cmd+I
Find Next Cmd+G
Find Selection Cmd+H
Replace Cmd+R
Replace Next Cmd+T

3) Some miscellaneous key-board combination

Cmd+. (Full stop/period)
Combination for cancel.
```

I do hope this is useful and people will adopt a standard set of short-cuts, but why re-invent the wheel when we can 'borrow' from an intelligent source. Even Windows adopted most of the short-cuts you see above...

As enforcement, I have heard that Apple users have a high expectation of how Mac software should look and feel, and will not hesitate to tell off any developers. I think we should take pride in how we want our Atari software to look and feel, and do the same.

Cheers,

Jakes, mo@sna.co.umist.ac.uk

> each time

Don't know how specific this problem is to MultiTOS - miniwin actually. The 30-50kB "memory-loss" occurs in varying circumstances/TOS, but often memory-free reports don't specify more than the largest block free. I've seen this kind of fragmenting occur with various programs, where one ends up with 1-2 blocks of this size, and "free memory" i.e. largest block smaller. One case is TOS programs run as/under GEM, others may be faulty malloc() or RESERVE use. Again, this may have little or nothing to do with your problem, though we all rely on some of the same basic OS routines.

Atari is causing Atari's downfall (at least in the computer industry;
they appear to stand a chance in the video game console arena).
Phreaking software will land you in jail, and so will "hacking"
software, if you use it to crack something, and then distribute that
cracked software to anyone.

>Some ELS-drives cannot be configured to work without parity!

Right - older ones can't due to a firmware bug.

Versions 4300 and 4302 (see EPROM label) have the parity switch working.
I once had one drive with version 3something, parity disable didn't work on
this one.

Another interesting fact: There are some ELS170S floating around with a
different firmware. They're Apple OEM drives, they identify as "QUANTUM
CTS160S" and don't have a write cache. Beware - they're a lot slower than the
real thing! These cannot be identified by looking at them - the identification
string is the only evidence.

Newer versions of ICD's BOOTFIX.TOS do the job, too. To use it, you still need
to connect the drive to some Atari hardware that supports parity checking.

If the CD is SCSI then you need a SCSI-DMA adapter.
This means either the ICD-Link or System Solutions own Translator.
SCSI cable goes from CD > adapter, then DMA cable goes from adapter to ST.

Laser C (formerly Megamax C) was a normal compiler, like Pure C or
Lattice C; it also had a similar crappy IDE.

I used to use Laser C from the command line... then I got Sozobon C and
Ian's Heat & Serve C... then I got GNU C and started learning C++...

I can't imagine why it wouldn't. Things like compilers (and word
processors and everything that isn't a game or a demo) have absolutely
no excuse for not running on TTs and Falcons.

> 2) Will it produce C source compatable with Lattice C 5.6 ?

Isn't that what it's using as the back-end for the C++ compiler? AFAIK,
Comeu C++ is based on AT&T's cfront C++ compiler, which translates C++
into C, and then calls the standard ANSI C compiler.

> 3) Where can I get a copy in the UK ?

I don't think its been released anywhere yet.

> never ENJOYED a computer in his life.
> Anyway, I'll stay with my Amiga for now :)

I'm a realist, I hate all the computers I've ever had to use. I keep
meaning to write a massive "I hate all personal computers!" article to
cross-post to comp.*.*.advocacy, but I keep forgetting... ;-)

Atari - horrible support, too much DOS in the base OS, no support of any
kind in North America; my machine is maxxed out at 4M of RAM,
its too slow and the graphics are terrible; won't/can't buy a TT
or Falcon (Falcon is too slow, TT's graphics aren't much better
than the ST's)

Amiga - never seen one in use; no memory protection; similar support
problems

PCs - the hardware sucks, no matter what you buy... no integration
whatsoever, and _very_ fragile setups; most run DOS/Windows; a PC
worth running something good like NEXTSTEP on costs as much as a
real workstation; OS/2 has too much DOS in it, Windows NT has too
much VMS in it; the ONLY thing PCs have going for them is the HUGE
number of decent games; there's no way in hell I would buy into a
platform where sound is still an extra option

Macs - Bozo OS if you want to program; no free software (especially my
favourite tools... GNU stuff); no memory protection in the OS, no
decent multitasking; lots of applications and groovy hacks, but
those don't help me much, since I want to program and play games
like Angband in my spare time...

UNIX - X and especially Motif are incredibly ugly and an afterthought to
the OS; something like OpenLook or VUE or Fresco might be nicer,
but they don't run on the NCR System 3000 machines I get to use
at work

VMS - far too arcane, IMHO

NEXTSTEP - currently, no decent hardware to run it on; this might change
if the HP PA-RISC port is almsot done

Why would they bother? I mean, really... They're _very_ successful
with their workstations and their printers, why waste some money on a
dying personal computer company? In North America, the only personal
computers that can survive are Macs and PCs, unfortunately.

My fault.

(1) MetaDOS with *Ataris* drivers doesn't support the Falcon SCSI port.
(2) The only other free and 'publicicly' (?) available driver is Atari's
MiNT driver. This one supports the Falcon, but obviously doesn't
work without MiNT.

If Atari ever releases AES 4.1 then (I've heard) the speed of MultiTOS
will be much better. The slowdown apparently has something to do with
"polling the systen" or somesuch technique...

I mean, MiNT 1.0x by itself on my system does not slow down things
much at all itself (and with Warp9 loaded, works qite well)...

Well, you can boot up MINT with or without GEM (thus I'd say yeah that GEM would be a layer on top). If you leave the INIT= line blank (or commented out) in your MINT.CNF file, you'll go into GEM. If you have your INIT= pointing to a shell, then you'll go straight into the shell (no GEM)...

There is a desktop (not released yet) that will support the various MiNT-specific items. I'll let the author mention it if he wishes to at the moment...

>(If it matters, my main interest is a platform for TOS and GEM program
>development; I currently use TeraDesk + Gulam + GCC and am trying to
>discover whether there's a reason I might wish to change.)

Unless you have >4megs RAM, then Teradesk probably is only eating up RAM for you. For some things, like compiling the latest MiNT sources, I have to boot up almost clean in order to avoid the running out of memory (I could boot straight into the shell to save memory from GEM, but I usually just boot into TOS, and do the compile under TCShell running in a TOSWIN window...

>terms of memory, speed, etc. I also need to know what the relative US
>price of this would cost.

Hmm, to max out your current system, you could upgrade the memory to
4megs RAM (with something like a Zram or other memory board), get
a TEC board with TOS 2.06, GET A HARD DRIVE!!! (try a SCSI drive,
where you'll need "The Link" from ICD), perhaps a Turbo25 25mhz
upgrade from Jim Allen. Each piece mentioned will probably cost a couple
hundred a piece (or at least a hundred a piece) , and all (except
I dunno about the Zram) should still be produced. You could check
a company like Toad Computers or others for many of these items...

For a bit more speed and memory availability, you could get
a Turbo030 (I think it works in ST's) which will give ya at least
a 32mhz 030 and the ability to use added TT ram, etc). This is also
from Jim Allen. (there was also the SST030 from Gadgets by Small, but
I don't believe he makes it any more)...

You'd probably way to get a highspeed modem as well. Some 14,400baud modems
(like the Linelink 144e from Micro/Mac Warehouse) run just around $100
(which is when I got one :-)

>Basically with all this talk of Multi-tasking and other goodies I have
>gotten biten by the upgrade bug.

To use the mutlitasking stuff (Geneva, MTOS, Mag!x) really you only
really need the 4 megs ram (although at least a 16mhz system makes
it nicer to use)...

>I however anm wondering if it would just
>be more cost effective to sell the ST (but not the monitors) and get a
>Mega4ST or Mega4STe. Can ya point me in the right direction?

Probably the overall cheapest way to max out is to get a TT or
Falcon (with 32mhz 3rd party upgrade), get a 24bit graphics card
(like the CrazyDotsII or Nova, etc), etc.

Hi friends

Suppose the subject above says it all.

What I would specifically like to know, is how to write a High Density Disk Drive cookie. I would like to write a program that would bring up the extra format option for HD drives under the formart menu in tos 2.06. Hopefully, this will be in C.

If I can not be helped with this, then a simple explanation of how to write a cookie will suffice.

Am I right in thinking that this can only be done with TSRs? And that this address (for the cookie jar) is at 5A0?

Thanx in advance. I hope to hear from you guys soon.

>-Steve
>selick@acs.bu.edu

Well, I've got a hard drive on order from System Solutions, and they have
just told me that I will be getting The Link 2 rather than the first
version. ICD have kept delaying them with deliveries but SS say that the
delivery date for the Link 2 is the 10th May (this is England, obviously).
That only leaves me to assume that it is now (or very shortly) available.

```
=-=-=-=-=-=-=-=
//// ICD Link 2
=-=-=-=-=-=-=-=
```

The Link 2(TM) - The next generation in SCSI host adapters for Atari ST computers.

Rockford, Illinois, April 2, 1994 -- ICD, Incorporated, a leading designer and manufacturer of hardware enhancements for Atari computers today announced The Link 2, the next generation in SCSI host adapters for all Atari ST computers.

For the past seven years ICD has enjoyed an enviable reputation as the world leader of interfaces connecting Atari ST computers to SCSI devices. Just two years ago, ICD set a new standard in excellence with The Link. Not willing to rest on its laurels, ICD is always looking for ways to push the envelope and redefine state-of-the-art. This path has historically given ICD customers the best hard drive performance, with uncompromising compatibility and speed at competitive prices.

Today, The Link 2 from ICD allows Atari owners even more flexibility in their choice of hard drives. The Link 2 is an external SCSI host adapter which is designed to plug into a standard 50 pin centronics style SCSI connector. A detachable DMA cable is included to plug into the hard disk (ACSI) port of the Atari ST computer. Housed in an attractively-designed molded case measuring just 2.5 inches by 3 inches and less than .75 inches thick (63x76x19 mm), The Link 2 will fit into any SCSI environment.

Although The Link 2 looks and functions much like its reliable cousin The Link, there are two distinguishing features that make it a real stand out. First, a unique indicating light confirms that The Link 2 is receiving sufficient power from the termination line of the target SCSI device. Second, support for parity has been added so it is no longer necessary to disable parity on the drive. The Link 2 is now truly "plug and go" and since most drives require no modifications, The Link 2 won't affect the drive manufacturer's warranty.

Up to eight SCSI-1 or SCSI-2 devices are supported by The Link 2. These devices could include any combination of fixed hard disk drives, CD-ROM drives, Floptical drives, Magneto Optical drives, Bernoulli drives, and Syquest drives as well as others. ICD software is nearly universal in supporting virtually every drive made. The plug and go architecture allows Atari ST, STE, Stacy, and STBOOK computers to use external SCSI drives originally designed for the Apple Macintosh, IBM

PC, Commodore Amiga, NeXT, Atari TT and Falcon computers.

The Link 2, along with ICD's highly acclaimed software, also gives multi- platform computer owners unprecedented flexibility. For example if a Syquest cartridge is first formatted under MS-DOS with FDISK, the user can directly read and write files from Atari computers under TOS using the ICD driver. These files can also be shared with IBM PCs running MS-DOS, and with Amiga computers using the integral CrossDOS utility.

Thomas Harker, president of ICD explained, "At ICD we Look, Listen, and Respond to the market place. Two years ago The Link broke new ground in Atari ST connectivity. It instantly became a best seller and took command of the market. Now we have responded to customer feedback by creating The Link 2 which improves compatibility and makes installation even easier."

The Link 2 is available now. ICD will support current owners of The Link with an upgrade to The Link 2 for $40. This upgrade offer is available directly from ICD and includes the latest software. The Link 2 comes with a full one year warranty.

For more information, contact Thomas Harker at ICD in the United States by phone (815) 968-2228 extension 222 or fax (815) 968-6888.

The Link and The Link 2 are trademarks of ICD, Incorporated. Other trademarks are those of their respective holders.

Well, hope he sends the key.. I'm using my registered version of Freeze right now, and hope he didn't loose all the address list when his drive went..

I'm also looking for more support of the TT and Falcon using Freeze, as well as more multitasking support.. right now, it's WORKING on the TT, but does have a few crashing problems from time to time.. and colour control is a bit limiting at the moment..

with the Falcon and all the new graphics boards, I'm sure we can start support better ANSI (full colour) and even RIPscript...

If anyone can get this info to Aaron, I'd appreciate it..

>that all SCSI drives must have the parity turned off. Can anyone
>suggest how to turn this off as the drive has only Drive ID pins
>and no parity pins. HELP!!!

There is a Util that ICD provide to do this, you must have one of the later
ELS drives....

But the big problem is that you most have a Host Adapter that can handle
parity in the first place...

If you have a friend that has a Atari host adapter that prives parity, he can
do it for you, if you need a copy of the software please let me know,
it can't be uploaded to any system as all ICD software has restrictions...

From: plucky@aol.com
Message-ID: <2q1p2n$suj@search01.news.aol.com>
Source record: 187984

I'm unloading the following Atari ST system. Would prefer to deal with someone in person rather than ship stuff (i.e., prefer southeast- or mid-Michigan -- I'm in Lansing and the computer's in Detroit).

85 MB HARD DRIVE -- $200
Seagate (I think) drive in D & P enclosure (provides room and power for a second hard drive). ICD AdSCSI Plus ST driver card installed. Formatting, partitioning and diagnostic software on floppy and also installed on drive. Has about 15-20 MB of PD software pre-installed. Includes power cord and DMA cable (well, duh!).

SPECTRE GCR 3.0 -- $200
Macintosh emulator cartridge with (necessary) Apple Macintosh 128K ROMs installed. This GCR version allows you to read and write Macintosh diskettes with your Atari drive by running included disk cable from cart to floppy drive's "out" connection. Manuals and software included.

4x 1MB STE SIMMS -- $100
Unfortunately, they're enclosed in a rather flaky 520 ST. Still, if it's worth it to you to open up the case and get them out of the memory expansion board, it's a deal. ST will be unusable (memory installation required disconnecting base 512K), but you get a mouse out of the deal, and the ST itself can make a nice doorstop.

ATARI SF314 FLOPPY DISK DRIVE -- $50
Double sided disk drive. That's right, I did have one of those really early STs that didn't have the built-in drive.

ATARI SM 124 MONOCRHOME MONITOR -- $20
Slight roll-off at right edge.

VARIOUS DISKETTE-BASED SOFTWARE -- $20
Games include Plutos, Xybots, Road Runner, BattleZone, Missile Command, Crystal Castles, Gauntlet (US Gold version), AfterBurner, Gunship. Other software includes CAD-3D, WordWriterST 2.0.

Please contact me at this e-mail address (Plucky@aol.com) or call me at 517-394-7545 anytime.

>Can someone provide pointers to some kind of beginner's guide to MiNT?
>

MiNT is GEMDOS level OS extension to your ATARI TOS computer. It is pre-emptively multitasking with adaptive prioritization and many Unix-like features. It allows for loadable device drivers, loadable filesystems, pipes, memory protection, and many other advanced features. It is kinda BSD-ish but is NOT a Unix-clone.

>What it is? What it does? What it works with? What it needs to run?
>(What it doesn't work with?)

It works with any legally written GEM or TOS application that does not steal vectors or access memory it does not own. Note that when only one program is running in memory, a program that uses memory it doesn't own will usually run just fine. Under MiNT you will get some problems with such programs. If you have an MMU, then MiNT's memory protection can help by killing programs that make illegal memory references - to stop them from mucking up other programs. Note that most GFA programs seem to have problems of ALL kinda with MiNT. Also, Warp9 doesn't like MiNT either, although NVDI works fine.

MiNT itself adds some OS calls and steals a few vectors to multitask. If you want to run more than 1 GEM program you will need ATARIs MultiTOS which is MiNT + a new AES which understands multiple processes. The new AES (yet unreleased) does not poll for events, which fixes the sluggishness that people report from MultiTOS.

To make use of MiNT, I would suggest the kernel, and at least TOSWIN, and you might want to get a Unix shell too, such as BASH, and maybe a few Unix text programs, like VI, MicroEmacs, or LESS (I like LESS!)

>> filesystems (minixfs - have a UNIX filesystem on your ST !) .....

>Where does GEM fit in all this? I think of it as a layer on top of TOS.
>Does it (and desktop managers like the default or TeraDesk) have a place
>in a MiNT configuration?

The standard GEM doesn't like it when multiple programs make AES calls.
However MultiTOS allows multiple GEM programs to run with MiNT. MultiTOS
takes care of swapping desktop backgrounds and menu bars for the programs
and also puts their names in the first drop-down (where the ACCs are) so
that you can switch to a program without moving a thousand window to top
the right one.

Without MultiTOS, the best you can do is run TOS and TTP programs. This
isn't bad. I currently have this terminal (which is threaded so that it
uses about 1% CPU time unless I stop typing, in which case it uses 0%,
no polling!!), BASH (a standard Unix shell with command line completion,
history, batch processing, job control, etc) and less a file viewer all
running in different windows through the TOSWIN program. By running this
GEM program as an ACC I can also run 1 other GEM program - I am, Myriad,
a MiNT aware DESKTOP replacement.

Under MultiTOS, the desktop is always available and you can drag-n-drop
files from the desktop to your programs or vice versa.

>
>(If it matters, my main interest is a platform for TOS and GEM program
>development; I currently use TeraDesk + Gulam + GCC and am trying to
>discover whether there's a reason I might wish to change.)

Well, you can run Gulam in a window, and edit a file while compiling
with GCC, plus you can run a Minix filesystem which should speed up
your compile times.

My atari club is selling equipment to raise cash. All of the equipment
is in good working order.

2 - 1040ST's tos 1.0

1 - Color monitor

Hard drive setup: three mfm drives totaling 70 megs in 11" x 11" x 7" case.
Has power supply, supra controller and adaptec mfm - scsi cards. [Not stylish,
but it works] This setup also has the advantage of having a built in backup. If
one drive goes, you don't lose everything. Also, it would be easy to replace
one of the drives with a bigger mfm or scsi. Contains backup of club's bbs with
plenty of software, both ST, 8 bit and Ibm.

The club is asking $700 for the whole thing, but I'm sure they would consider
any serious offers and would be willing to sell pieces individually.
If interested, send netmail, or leave a message here or on our bbs, 504-891-1388

Lots of Atari users with non-english/american language gets into lots of trouble when english speaking programmers forget about the rest of the world!

We experience over and over again programs that won't even allow us to type in the special characters of our languages, such as the norwegian (A with an o above), the Ø (O with /) and Æ (combined AE).

Why? Du you programmers restrict text input to ASCII 31-127?

I've only written one piece of software myself, The Spitting Fish from Budgie UK.

In this program I worked out a solution to make it easy to translate the program to any language. How? Simply by putting all the programtext in a separate file, just like a random access datafile. The program just had to give the line number to find the text when needed.

I, and other members of our usergroup will be more than glad to help translating your software to norwegian - to make it more attracktive to norwegian PD/shareware users.

The usergroup can also distribute the software - and if that's what you want -do the shareware registration for you, f.ex. by credit cards. We can also du registration for the other scandinavian countries!

So all you programmers out there - please bear in mind: There are Atari users out there with more than 27 characters in the alphabet!

I registered Freeze Dried two years ago by sending Aaron $25.00. I never got the software key, and have never heard from Aaron. I tried contacting him on the BBS's he claims support FD, and I tried calling his home (number unpublished), to no avail. I did find that he has cashed checks from others and not sent keys.

I obtained a pirate key to make my demo version work. After all, I paid for it, so I deserve it.

I now rarely use FD because it doesn't work properly with Geneva. I bought STalker from Gribnif (a great company with actual support). I actually like FD's ANSI better, but I'll stick with STalker.

I have heard Aaron is working on an update and that Atari United will handle the keys, but nothing has come of that for many months.

My advice is to stay away from Freeze Dried and try one of the many other ST terms (Connect, Flash II, etc.).

CEO file contents:

I don't think Thalion are stupid. Putting ST and PC versions of a game on the same disk is probably a good way for them to reduce costs, as the disk formats are the same. They probably use the same scenery files etc... Good for you anyway !:)

I've already seen coverdisks in french magazines that work on ST, PC and Amiga. They do this because the boot sector for ST/PC is not at the same location as the Amiga (or something like this...). The Populous data disk was also ST and Amiga compatible : In the Bit Planes world it was Atari vs Commodore depending on the machine it was running on !

Hi!

i'm trying to write my own harddisc-recording-tool with PureC. when i reserve
all the free memory and record in the normal mode (buffoper(4);) it works well,
but i didn't find out how the loop-modus (buffoper(12);) works correctly.
can someone show me how that works?

here my "wrong" record and play routine (i didn't translate the comments in english,
if you have a question feel free to ask)

```
------------------------------------------------------------------------------

/* Harddiskrecording - Aufnahme (record) Routine im Loopmodus */

#include <tos.h>
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "sndbind.h"

#define PEGELEIN 14 /* pegel f�r eingangskanal */
#define SAMPLEFREQ CLK50K
#define AUDIOSIZE 65536L
#define BUFFERSIZE (AUDIOSIZE+1000) /* check buffer overflow */

void main()
{
char *samplepuffer,*puffer_end,*puffer_mitte;
long aktuell[4],halfsize;
FILE *f;
int i;

if( locksnd()==1) /* soundsystem f�r andere anwendungen sperren */
{
soundcmd(LTATTEN,0); /* ausgangskanal: keine abschw�chung (0..15)*/
soundcmd(RTATTEN,0);
soundcmd(LTGAIN,PEGELEIN<<4); /* eingangskanal: verst�rkung (0:min 15:max)*/
soundcmd(RTGAIN,PEGELEIN<<4);
soundcmd(ADDERIN,1); /* quelle f�r hw-addierer: adc */
soundcmd(ADCINPUT,0); /* sounddaten vom mikrofon */

samplepuffer=(char *)malloc(AUDIOSIZE); /* speicher f�r recbuffer res. */
memset(samplepuffer,0x00,BUFFERSIZE); /* speicher auf 0 setzen */

puffer_end=&samplepuffer[AUDIOSIZE];
halfsize=AUDIOSIZE/2L;
puffer_mitte=samplepuffer+halfsize;
```

From: huveneer@math.ruu.nl
Message-ID: <huveneer.767869375@hieper>
Source record: 187808

Hi,

I am planning to write a harddisk recording program for the Replay 16
cartridge.
For this I will certainly need harddisk DMA writing.
Does somebody have an example on how to use DMA in C or assembler?

I have a MegaSTE, but I think DMA works the same on it as on a ST.

To show my gratitude, I will put this program in the PD.

Richard.

"F030 - LIST OF GAMES" NEW ENTRIES
==================================

Compiled by Heiko Hartmann
zcam1121@rpool4.rus.uni-stuttgart.de
Last Update: 04/30/94
New Titles: 23

-----------------------------------NEWS-----------------------------------
You can get the complete list (>600 titles!) from ftp.uni-kl.de.
Directory: /pub/atari/falcon, file: f_games_list.zip.
--------------------------------------------------------------------------

ST: Status. "PD" - Public Domain, Freeware, Postcardware etc.
"SH" - Shareware, Dongleware, Poolware etc.
"C1", "C2" - Commercial
C: Compatiblity. "-" - The game does never run on F030.
"+" - The game runs with ST-Emulators like Backward etc.
"!" - The game runs without modifications (in ST-Low)!
An additional "^" means: Game does also run in higher
resolutions than ST-Low or ST-High!
MHZ: Mhz-rate of 68030 (and Blitter). "8" - 68030 with 8 MHz.
"16" - 68030 with 16 MHz.
DC: Data cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.
AC: Adress cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.
STE: STE-Bus-Mode. "-" - STE-Bus-Mode is not needed.
"+" - STE-Bus-Mode must be switched ON.
SND: Sound. "-" - The game has no sound on F030.
"+" - The game has slightly distorted sound with ST-Emulation.
"!" - No problems with sound on F030.
HD?: Harddisk installation?. "+" - The game can be installed on HD.
"-" - HD-Installation is not possible.

A "?" means: unknown. ">?<" means: Info maybe wrong (conflicting reports)!

NAME ST C MHZ DC AC STE SND HD?
--------------------------------------------------------------------------------
A Day at the Races C1 + 8 - - + + + Version 1.2
Batman (Joker) C2 + 8 - - + ! - Best compatibility
Batman (Penguin) C2 + 8 - - + ! - Best compatibility
Crazy Stunt Cars C2 - ?
GEMThor SH !^ - - - - ! + GEM
Hard Drivin C2 + 8 - - + ! ? Best compatibility
Indiana Jones, Temple C2 + 8 - - + ! ?
```

```
Jupiters Masterdrive C2 + 16 + - + ! -
Master of Chaos PD ! - - - - ! +
Night Hunter C2 + 8 - - + ! ?
Pipe Dream C2 - ?
Risk (commercial) C2 - ?
Robinson's Requiem C1 ! - - - - ! ? Falcon game, unreleased
Spherical C2 ! - - - - ! +
Stunt Car Racer C2 ! - - - - ! ?
Super Hang On C2 - ?
Tennis Cup C2 + 16 - - - + -
Test Drive C2 + 16 - - + ! ? Best compatibility
Turning Point C1 - +
Ultima V (Warriors..) C1 - ?
Ultima VI (Prophet..) C1 ! - - - - ! +
World Games C2 - ?
Wrath of the Demon C2 + 16 + + + ! ?
------------------------------------------------------------------------------

Do you have informations about another game? Do you have some corrections
for the list? -> EMail me! This list should be as big as possible and
therefore I need your help!

------------------------------------------------------------------------------

Remember: All informations are subject to error! No warranty that the
given information is correct! I'm unable to test all the games in the list!

>monitors on the Falcon, it is made by Chr-Magic in the States and is about 30
>us dollars, the thing is that you can switch between all Falcon resolutions
>without rebooting the machine and this is a great convenience.

And if you want to build your own for about 3-5 Us dollars, you can get a file called "FALCADAPT" (or something) from an Atari.archive near you (atari.archive.umich.edu)...

30$ for it is way too much... all you need is a 19 pin Dsub (same as for ASCI port (but rveresed sex!!)) and a 15 pin High density Dsub (SVGA) and a switch... and something to put it in!!!

Ok... If you are NOT sooo good with a solder iron... then buy the thing for, uck: 30$ ... But if you think you can do something, take a look at the Falcadapt- file...

Atari has managed to put enough energy to keep the computer arena
alive, but perhaps only on life support ;-) I hate to say it, but
Atari's dive back into the video arena with the Jag might actually
have saved them - since apparently (and I guess it's true)
Commodore (aka Amiga) is going into liquidation. Sad to see a friend
or a prime rival leave, but I guess that is life. Either way,
as long as I see new stuff (hardware or software) coming out for the
Atari, I'll be around here (took me till 1989 to finally break
from my Atari 8bit :-)

>FTP site? If it is good, any suggestions? Thanks,

Did you set FTP to "binary" mode before you pulled it from the
FTP site? Did you set Kermit (on server and Atari sides) to "binary"
before downloading? If not, that is probably why you are getting
the errors (any binary file, an archive, picture, etc will be messed
up if not FTPd/Kermited in binary mode...

As for the Xmodem, there may be a setting/choice between plain
old XMODEM and XMODEM CRC - make sure you have the same one being used
on both sides - they both work similar, but just a little differently.

Hope this helps...

The reason why so many people want a new GFA Basic is because they are
used to it and have a lot of code they probably don't wish to port. Basic 4.0
was meant to feature many things, amongst them Multitasking Support, Falcon
Video etc. etc. the first Beta I played around with wasn't that bad IMO
but then again, I was never a GFA Progammer myself

Cheers

From: guerin_f@anion.epita.fr
Message-ID: <2q2prj$le@boson.epita.fr>
Source record: 187809

Hy all,

I'm an amiga musician but i'm going to make modules
for the Falcon soon...by making music on the amiga
first and after transfert it on the Falcon..

But the problem is that i don't know what kind
of effects you have on the principale tracker on
atari..

Could someone explain me here or by mail...which are
the effetcs you have on FALCON ?

On amiga,the principal tracker effect are:

E6x = repeat a pattern x times..
E9x = replay a note x times on the same position
EAx = pop up volume very slowly (better than a Cxx)
EBx = pop down volume...
....
...
..
.

I don't need the explanation of all the effects..just
the number of the effect (E60...)

Thanks a lot..

Also if someone need a music,not a problem i can send you and
make some music for your demos,games....and free of course!

2113. fax-software

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 12:43:25 UTC
From: mdekker@fwi.uva.nl
Message-ID: <2q2shd$bd@turing.fwi.uva.nl>
Source record: 187814

hi,

I am looking for fax-software for my ST. I am using a 14k4 fax modem, don't know the exact fax-specifications (the manual is at home), i believe it can handle G3 (?) faxes. Is there any fax-software around on any site?
reply by mail please.

> Close Cmd+W (note W for close...)

Most good GEM-programs use ^W for rotating/cycling windows, not to close them. The usual shortcut for closing windows is ^U.

I've got only one program which uses ^W to close a window. I was quite surprised when I checked it out the first time...

>I am looking for fax-software for my ST. I am using a 14k4 fax modem, don't

Try CoMa (Communication Manager). A fast and GEM based fax program (works as *.acc and *.app). Version 2.00 has recently been released.

status:
receiving: shareware (DM 99,-)
sending: crippleware (in the unregistered version you can only send 500 fax lines [approx. 5cm = 2"]).

BTW: it displays incoming faxes in realtime - even on a 8 MHz ST.

2116. Civilization on your Falcon030

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 14:11:56 UTC
From: slyster@outb.wimsey.bc.ca
Message-ID: <slyster.1l3c@outb.wimsey.bc.ca>
Source record: 187901

For those interested in playing CIVILIZATION by Sid Meier on your Falcon030, to avoid problems, simply ignore the INSTALL.PRG on the master disk. Simply manually copy the files from the four master disks on to HD, and the colour settings will be fine.

This should enable CIVILIZATION to run on your Falcon with no hardware fixes!
Nope - no Backward, not FalconSX.

2117. SM124 base by NCR wanted

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 14:15:17 UTC
From: jimd@mugwump.eng.wayne.edu
Message-ID: <2q31tl$36v@oak.oakland.edu>
Source record: 187817

I caught the end of a thread concerning the fact that there was
an NCR display in the same case as a SM124, and that NCR made
a twist/tilt base for theirs. NCR (now AT&T) Parts knows
nothing about this. It is not in their repair parts list,
because they don't break, and if they do it doesn't matter.

Does anyone know the NCR part number for this SM124 base?
NCR's local office has been as helpful as it could be, and found
no information about the part number I am looking for.
AFAIK, the thread started when someone found an NCR base at a
swapmeet, still in its shipping box, found that it fit a SM124
perfectly, and posted a question about how this came to be.

What I want to know is the part number on that box.

Thank you!

I really didn't write that very well. You're right, TeraDesk doesn't do anything for my GCC efforts; I just like it as a desktop.

If I was smart, I'd probably run some kind of boot manager that gave me a different config depending on what I was going to do...but then I'd have to think ahead. :-)

What do you use to control how your system comes up?

(BTW, I'm talking about a 4mb STe with not enough HD space at the moment.)

>That's not much value added, emulating a computer with a reduction in power.

Well, the "reduction in power" you mention is all relative, of course. If a user currently has a fast (>= 25MHz) 68040 based Mac, then he/she is likely to detect slower performance running existing 680X0 software in emulation mode on the PowerMac. If however, that person has a machine like a IIci (25MHz 68030) or slower, then those same 680X0 apps will likely seem faster. Users of these 'slower' Macs have no reason not to upgrade to the PowerPC right away while users of the faster 040 Macs might want to wait until PowerPC versions of their favorite software is available before they upgrade.

>The only faintly consumer-oriented product in the P601 family right now is the
>Power-Mac. And running Soft-Windows on it to emulate a Mac emulating a Windoze
>environment just doesn't strike me as being very sensible or efficient.

If one does a LOT of DOS/Windows work, then obviously, a low-cost PC clone seems to make more sense than emulation on a PowerMac. If you only use PC software on an occasional basis, then the SoftWindows emulator makes a lot of sense, even at only 486SX-25 speeds. Having only ONE box on your desk is quite attractive, IMHO.

Yes, I'm sure he could, but the question is, "Why?"

>I realize that the money for writing emulators for the Atari wouldn't be as
>good, ...

Bingo! :)

Unfortunately, most Atari users really have little perception of just how small (and still shrinking) the Atari market actually is in comparison to the huge PC and, comparatively speaking, Mac markets. It's extremely difficult to bring a new Atari product to market nowadays with any hopes of making a profit. Considering that development costs are relatively the same for any platform (albeit marketing costs are much higher and one's competition is fierce in the PC/Mac market), a developer's trepdiation is understandable before venturing into an Atari-only product venture today. Just food for thought...

> The only reason that Mihochka is doing GEMulator is do get at Atari. He >has a personal vendetta against them.

Ah, c'mon, Dan. I doubt you seriously believe this is the case.

It's true that Darek has been an outspoken critic of Atari Corp in the past and certainly didn't rate #1 in many Atarian's "List of Heroes" book. But to say he developed the Gemulator solely to "get at Atari" is silly. There are a lot easier (and cheaper) ways of doing that!

>I would also bet that if Atari ever went out of business, support for the >GEMulator would dry up within a very short time.

On the contrary, I would think such an event would INCREASE demand for the Gemulator, at least in the short term. If Atari folded, many would feel an increased pressure to change platforms, many to a PC. On the other hand, they wouldn't want to totally give up their collection of Atari software right away so the Gemulator would offer them a viable, if not ideal, alternative.

Caveat... like your comments, the above is just "IMHO." ;-)

The continued support HiSoft has shown for Atari is certainly an important factor and one which should not be overlooked.

>GfA has had its day ,for struched programming Pascal is much more
>better suited and isn't very different from BASIC.

Learning C isn't THAT much more difficult than Pascal and if one chooses to learn a new language anyway, C is a better choice, IMHO.

>I don't understand why people still want a new version of GfA BASIC.

Because most people would rather not have to learn a new language, if at all avoidable. To many people, GFA is like an old pair of shoes... showing a lot of wear, not very attractive, not likely to be as fast in a race, but ohhhhh so comfortable. :)

There have been a lot of questions and answers about CD-ROM on ATARI
Computers .
I think it's time for a "Frequently Asked Question" about it.
I make it if you send me your experience on CD-ROM for ATARI computers.

So if you installed one, send me :

- Your configuration;
- the model of CD-ROM drive you have;
- the drivers you tried (the working and the non working ones);
- the discs you tried;
- your needs or desires;
- everything that can be usefull.

I would also like to have a chapter about the programmation of the cd-rom
(How do we access SCSI bus on falcon & TT, where do we find usefull
documents about it, ...)

Thanks a lot .
Loic

P.S. : Please excuse my english.

>Open your own! The GUS card is 65Khz (or maybe it was 68Kh) .. it's over
>60Khz and has lots of documentation - I hear its cheap too.

Sampling frequencies beyond 44.1 KHz aren't so useful in normal audio
uses. A quality 16 bit stereo audio input and output is more
important. GUS has only 8 bit ADCs as default (16 bit sampling is
option). Falcon audio allows also more flexibility, because of the
programmable DSP 56001. I am almost sure that with good programming
56k can do more than 16 channels "CD-quality" music, the bandwidth
from main memory to DSP may become a problem though.

After hearing the rumors, I did a search of my universities news service,
and discovered that Commodore is in liquidation (ie "going out of business
sale"). This doesn't preclude someone from purchasing the rights to the Amiga.
I've not heard anything either way, however.

Message-ID: <940502173556.19161@cse.unsw.edu.au>
Source record: 187826

I recently bought a cheap secondhand Ste to replace my STf, which has some problems. Everything worked happily for a little while, and then the root directory on my hard drive (a SH204) got corrupted. The first couple of entries were OK, but after that it looked like two bytes had been lost and all the other entries were moved down by two bytes (so it looked as if the first two bytes had been removed from each name). I zeroed the partition and was able to restore most of it from backups when the same thing happened again.

There was some discussion in this group about some STes having faulty DMA chips. Is this what I have? Is it worth fixing, or should I just return it?

Also: The SH204 is partitioned into a 9Mbyte and a 10Mbyte partition, with 1Mbyte unused. The fellow who sold it to me cautioned me against repartitioning to use all of the disk. What terrible thing will happen if I do?

2134. New superb shareware mono paint program from Norway! (3rd attempt:-)

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 18:16:00 UTC
From: stein.arne.jensen@p10.secom.ct.se
Message-ID: <2dc55200@p10.secom.ct.se>
Source record: 187643

Here we go:

Hello!
I'm leader of "Atari Users Of Norway".
To help one of our members I'm hoping for a reply on the following cry for help from our member Vegard Hofsoy.
Just send the answers as a reply to me!
Here's Vegard's letter:

I am currently finishing a mono paint-program for all Ataris, called "Munch". In it, you can work on pictures much larger than the screen. Most functions work also on the whole picture, that is you can draw a circle covering most of a 2000*2000 canvas. For this, I have used a rather slow bitblit method. Is there a way I can pass a new width and height to the VDI, so that I can use GFA-basic's boxes/circles etc to draw on the large picture in one pass? The width and height must be configurable during program operation, not set "once and for all". If possible, I would like to use a method that works on all Ataris. My outline for such a routine goes like this:

1.Use XBIOS(5) to set new adress for screen output
2.Inform VDI of new width & height
3.Draw (using box/circle/ellipse/fill...etc)
4.Set VDI width & height to 640*400 again
5.Use XBIOS(5) to set screen output to XBIOS(2) again

If this is possible, I would be VERY grateful if sombody could enlighten me as to points 2 & 4 above.

Vegard also wants to include scanner support in his program - that is - to scan directly to the screen from inside the program.

He's so far been unable to obtain information on how to read data from the various scanner types (Naksha, Golden Image, Pyramid, Power etc...)

Are there anyone out there writing scanner software who can help please!

I believe NewTek has just release (or is releasing) the Screamer, which
uses several MIPs processors to perform rendering. I think it is a standard
PC card. So, it appears that NewTek is weaning itself from Amiga (just
in time).

2137. Atari Corp Stock Prices

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 18:42:37 UTC
From: hicksm@panda.lpl.arizona.edu
Message-ID: <2q3hit$fur@auggie.CCIT.Arizona.EDU>
Source record: 187846
Cross-posted to: comp.sys.atari.st,misc.invest.stocks

Hi, does anyone know the story behind Atari's recent strong dip in stock price? Atari trades on AMEX, I believe. It was pretty steady for awhile at 7, now down to 4 7/8?

-Michael Hicks

I'm 99% sure the problem is on your end (I uploaded and tested the file).
Are you using the latest Lharc (3.01)? I'm not a Kermit guy, so I cannot
help you there. Do other files you download work? If all else fails,
you can try uuencoding it, downloading as text, then uudecoding on your
ST (uudecode.ttp available on atari.archive.umich.edu, I recognize the
chicken and egg problem).

BTW, this is an awesome tracker, IMHO.

I don't know of an English version of that program, but I use one called
"Atzenta2" (or something very similar). It has all the standard bells and
whistles, and can dial phone numbers with your modem with a mouse click
(my favorite feature). It is definitely worth a look.

Greg> many pieces of software that do direct screen access that not
Greg> only run, but in many cases run faster than my 1040ST.

How about demos and such which do REALLY strange things? Things that
"increase" the available colors by changing the palette every scanline
and things like that... How good is it at that?

My reason for wanting a Gemulator: I will HAVE to use a PC or SGI at
work. That means, Gemulator is the only way I'll get any of my ST
stuff running there... Sometimes I may WANT to use AtariWorks or
whatnot...

2142. MinixFS vs Large HD partitions..

Newsgroup: comp.sys.atari.st
Date: 1994-05-02 21:32:00 UTC
From: martin.budsjo@vilhelmiac.ct.se
Message-ID: <ff870f7afe@vilhelmiac.ct.se>
Source record: 187607

partition!

I have manualy changed the sector size to 512 bytes. (It is mentioned in the manual as a possible way to get MinixFS on a large partition..) After that I tried to run minit with the -V, -b and -i parameters but it only returns "Unable to find sector XX..". The number "XX" changes if i try a diffrent number with the -b option.
I have used version 6.09 of MinixFS..

One other question.. Is the block number equal to the number of sectors on my partition?

Regards Martin

PS
Forgive me for the bad english..

Generally when compiling MiNT, etc I just use the built-in (TOS 2.06) desktop - I dunno how its memory usage compares against boot stright into an alternate desktop/shell...

>If I was smart, I'd probably run some kind of boot manager that gave
>me a different config depending on what I was going to do...but then
>I'd have to think ahead. :-)
>
>What do you use to control how your system comes up?

Well, I'm still deciding on a boot manager. I have been trying out MouseBoot lately (I think I got it off of an Atari club monthly disk). I've heard Xboot is supposed to be quite good as well (and there's always Superboot and Desk Manager)...

A boot manager is definitely something to have though if you are gonna have different setups (say a Geneva setup, a MiNT setup, etc)...

There is also a way to make a 1040 STf or STe run a NOVA Graphics Board,
several users use such a system, esppecially in Germany, where they
have the PAK accelerator board where it makes much more sense to run
a true color board on a say 68020 or 68030 than say on a 68000/8

Cheers

|> >that it only reaches the speed of an 8 MHz ST if you have a 486 DX2/66.
|>
|>
|> >Christoph
|>
|> And where did you read this?

Sorry, I didn't remember it correctly - I've checked it out once more. The article was in issue 6/93 of the magazine "TOS". The PC which was used in that test was a 486 DX 33.

int-Benchmark fp-Benchmark
---
8 MHz ST 33s 40s

486 DX 33
/Gemulator 23s 25s

It says in the article that in practical applications, the Gemulator reached about the speed of a normal 8 MHz ST. I don't know whether the Gemulator has been significantly improved during the last year - maybe.

Another question is whether ST emulators make sense at all and if a used Mega ST/E could be a better choice (guaranteed compatibility, MIDI interface, ROM port).

I don't think that there is any software in the ST market that hasn't a comparable counterpart in the PC world - perhaps some MIDI stuff, but the Gemulator isn't able (yet) to support this. Right, the PC software is more expensive, but the Gemulator isn't for free, too. And sometimes you can get software bundles for very attractive prices (e.g. in a bundle with a new PC or as a special offer from a software company - think about MS office).

On the other hand, PC hardware is comparably cheap - especially when it comes to graphics cards. If I think about how much I would have to pay for an ET-4000 card for my TT ...

Hi,

o> Has anyone heard about a device called Screen something for the Falcon?
o> Apparently it is sold by Hard & Soft in Germany. It is a video card for
o> the Falcon. Any info will be useful.

There are two video cards for the Falcon called Screen something:
a) The one by Hard & Soft is called Screen Wonder Pro
b) The Screen Blaster is sold by Overscan, Berlin

Both video cards are just a small device which is just put between the video out port of the Falcon an the Monitor. 800*600 dots are fine at >80 Hz. There are bigger resolutions, also interlaced. For more informations you better write to Hard&Soft, 44575 Castrop Rauxel and/or Overscan 12045 Berlin.

ciao, Chris.

: Learning C isn't THAT much more difficult than Pascal and if one
: chooses to learn a new language anyway, C is a better choice, IMHO.

Learning C IS difficult. C is the assembler of the 90s!
I know C-programmers which don't understand their code they have written
two weeks ago!

: >I don't understand why people still want a new version of GfA BASIC.

: Because most people would rather not have to learn a new language, if
: at all avoidable. To many people, GFA is like an old pair of shoes...
: showing a lot of wear, not very attractive, not likely to be as fast
: in a race, but ohhhhh so comfortable. :)

The GFA-Compiler produces nice code which is fast enough.
I think most people want GFA-Basic because there is so little choice of
anything other than C on the Atari. Well, Pure Pascal is nice, but many
people don't like Pascal. I'm still waiting for a comfortable C++-port
on the Ataris...

Hewlett-Packard was going to use the AAA chipset that Commodore was
working on for set-top boxes for interactive cable. They MAY still
buy that part of Commodore during the liquidation.

NewTek _never_ needed the Amiga for rendering anything (except that the
Lightwave software was written for the Amiga). You don't even need the
Video Toaster hardware for rendering via Lightwave, other than as a
really expensive dongle. The Video Toaster hardware is there for the
camera switching/video editing facilities, not CGI rendering. Also, the
Screamer is reportedly buggy as hell (NewTek GAVE one to the Babylon 5
guys for beta-testing and they stopped using it within a matter of DAYS).

: buildings but I just can't blow them all up before getting killed. And if I go
: and kill all the bazooka chaps then there are too many soldiers around for me
: to get to the gun! :(

You have to take out all the bazooka blokes before you can get into the gun
(although you can leave one bloke who's hidden behind the building half way
down on the map on the far left). After that you have to clear away as many
men as possible before you get into the turret. If while you're in the
turret and too many men gather around you they eventually grenade you....
After you've blown up the buildings (double check !) send another man down
to wipe out all the men standing around the turret.... and then the bazooka
bloke hidden behind that building (and his friend).
That's the way I do it anyway !!

I have now set up a Emagic (Notator) Logic users mosaic page.
There is stuff here about Logic, Notator SL and SoundDiver.

Anyone that is interested in any of these is invited to check it out.

Currently there is: A version 2.0 Logic press release
Features list of Logic
Screenshots of both Logic and SL
Features list of SoundDiver
Logic-Users mailing list digests

If you have access to xmosaic, then the address is:

http://web.city.ac.uk/~cb170/notator.page.html

I get the feeling that its all down to a lack of communication.....all the
complaints about orders seem to come from Europe... I had problems with my
order,but nothing on the magnitude of you guys...

BTW Kim,I've had only one problem with RST on my Falcon,and that was the
upgrade installation program.

Cheers,

Brian.

Well, what you need to do is replace your DMA chip. I just fixed my own STE
that way - the chips are about $60. - IF YOU CAN GET ONE!!! -

I had quite some problems to get the right DMA chip as only one kind will do:

C398739-001A

2169. Cheap Falcon 40 Mhz upgrade !

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 12:11:59 UTC
From: robertde@htsa.aha.nl
Message-ID: <1994May3.121159.13666@htsa.aha.nl>
Source record: 187933

I think that a lot of peolple (who think that the falcon is slow)
are interested in this.

ACN (from ST Nieuws) in The Netherlands are selling a Falcon 40 MHz upgrade
from the german firm Digital Data Deicke. It's called Highspeed 40 MHz.

It upgrades the 68030 and ! the DSP to 40 MHz. It also can switch the video
clock to 40 Mhz resulting in higher resolutions. The upgrade can be switched
back to 16 MHz by a hardware switch without a reset. In that way programs
(probably mostly games) which doesn't work at 16 MHz can still run.
The upgrade doesn't use the expansion slot so you can still use other hardware
in your expansion slot. Therefore the upgrade requires some soldering.

Some numbers: 100 % is a standard 32 MHz TT 030
CPU memory: 112 %
CPU register: 124 %
CPU divide: 124 %
CPU shifts: 126 %

The upgrade makes your FALCON 030 about 1.2 times as fast as a TT 030 !.
The price is very cheap. It costs f279,- dutch guilders which is about
96 U.K. pounds or $143 dollars.
It is now temponary selling for f249,- dutch guilder (85 pounds, $128 dollar)
including the software speeder WARP 9.

Is there someone who already has worked with this upgrade ??

Bye !

Well _I_ find it fairly easy to "code" HTML documents by hand, but then
again, I've used LaTeX before.

I wanted to create a suite of styles/macros to make HTML development
easy; otherwise, everyone will need a klone with Word for Windows to do
it.

2171. Zoom Faxmodem Troubles

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 12:33:37 UTC
From: bign@eskimo.com
Message-ID: <Cp8882.A8B@eskimo.com>
Source record: 187606

Yesterday I bought a Zoom Faxmodem 14400 v.32 v42bis and installed it on my Mega2 ST with TOS 1.02. I have Serfx20.prg in my auto folder as well.

Neither Uniterm or Stealth will connect at anything over 9600 without 4 bombs. Connect runs quite nicely, except after zmodem transfers where it always locks with 4 bombs. I use RCS/CTS flow control and baud set via Connect at 19200.

The init string that I have stored in the modem is AT&Q5F10. The manual is geared for MS/DOS users.

Another annoying thing is that the Carrier Detect light is always on when the ST is running. I had to configure Connect to ignore the CD before it would dial.

Any help would be appreciated,
Todd Hogarth

2172. Help... Vector problems in Calamus SL

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 12:41:09 UTC
From: martinmf@imv.aau.dk
Message-ID: <martinmf-030594134109@thor.imv.aau.dk>
Source record: 187932

I am working with maps, that I want to import into Calamus SL as CVG - or alternatively import IMG-pictures and vectorize in the line-art module. The problem is, that the maps are complex, and the line-art module has problems with a vector buffer overflow (no matter the size of the vector buffer). The maps works fine in Avant Vector, so it seems it is a SL problem. Any suggestions???

> at 4 7/8. Unless...

A little news about the Jaguar release in Oct-Nov '93 surged the stock from 5 to about 12. It settled back to the 6-7 region. Now, a few delays and lack of news (along with general market sentiments) has prompted many speculators to sell, dropping ATC to about 5. That's how I see it anyway. Does anyone else have specific news about ATC?

The only thing "on the wires" in the last couple of months is that Time-Warner increased their stake in Atari by 2% (from 25% to 27%) by buying $12M worth of stock (or so) at $8.50 per share. This deal went through in late March or so, and will help Atari with cash flow to produce/advertise the Jaguar and related products. $^)

Try mailing Nathan at DMCPUBLISH@GENIE.GEIS.COM and ask him.
He is head honcho at DMC.

Failing that, what version of SL have you?
You could send me an example and I'll see if it does the same with my setup.
I could load it into a few vector packages to see if the files are corrupted
in some way.

How much memory do you have?

>
>Ofir Gal's column about the Internet (in the May issue of ST Review) is also
>one of the few entirely factual magazine articles I have read on the subject
>- and a delightfully positive article at that.

I agree. As a subscriber to ST Format (I have bought every issue!) I do think it is getting too simple for my liking, not giving enough detail in the right places - for instance their review of MultiTOS went into no depth at all. Anyway, my sub is due for renewal in the next few months, and to be honest I doubt I'll bother.

ST Review is much more of an informative read IMHO, much more suitable for serious users (although all those photos of reviewers armed with soldering irons do make me worry). The informal sections make a light, varied read and make a decent break from the more serious stuff.

It's a pity that ST Format still sells more than the ST Review and ST User. I have a feeling this might not be just down to the quality of the mags, apart from WH Smiths (which stock all three mags), if you can find a shop that sells any ST mags at all, you can bet it'll be ST Format.......

Ofir's article on the InterNet summed up the enthusiasm people have here - I know that over Easter when I was ordering my Falcon I desperately wanted to be able to get on the 'Net for advice! I'm gonna have to think seriously about getting a modem for over the summer hols (BTW: Does anybody use a modem as well as the Tabby? Do you switch leads all the time, or do you have a switch box? And does the Tabby driver go mad when connected to a modem?).....

Neil.

> Stuart Lyster
> s.lyster@genie.geis.com

Okay. I've been running Civ pretty much since it came out, and following these threads. The "crashing on entering the city" bug is caused by an error in the corruption calculation, whereby you can actually have more corruption than trade. Obviously, this doesn't happen under higher forms of government, but if you open a city display far from your capital under anarchy (or it builds something and opens automatically) then the game tries to draw a negative number of conventional trade arrows and bombs out. There was a patch for this posted some time ago, but regrettably it doesn't work with the newest (v3) version of Civ. Version 3 was (to my knowledge) published last July or so, and despite the fact that several bugs remain unfixed (and I've written to them detailing each one carefully) they don't seem to be prepared to continue development. Unless anyone knows otherwise, it looks like we have to grin and bear it.

BTW - To the guy who complained at getting over 100%; the percentage is simply 2,4,6,8 or 10 percent of your score depending on which level you play on; I've managed to get 180% on Emperor level.

Hi everybody!

Who knows whether Lars-Erik is available via email?

(I would like to ask him about a program he did for the Geniscan-ST
Scanner.)

Does anybody know if there is a programm available which uses GEM and which
will work with MTos, higher resolutions, etc. I got this scanner and
interface very cheap and it runs on my falcon. The only problem, not a
great one - but a problem... is the software. It writes directly into the
screen-ram, has a very ugly UI, etc.

Greetings,
Christian

From: FELDAK79@SNYONEVA.CC.ONEONTA.EDU
Message-ID: <01HBWE2JUTFM9AN8HF@SNYONEVA.CC.ONEONTA.EDU>
Source record: 187943

People (my self included) want a new version because we are most
comfortable with the language.

Also, GFA Basic is one of the most natural and easiest languages to program
in for the programming novices. It brings much of the instant gratification
of the old BASIC interpreters.

Instead of waiting several minutes for your programs to compile - you can
see the results almost instantly. Furthermore, the GFA editor has always done
a great job catching the most basic typographic and logic errors that would
cause the users of most other languages to lose their hair!

And, you can't forget how stable the GFA system is. Even on TOS 1.0 machines,
GFA handled system bombs like a champ...exceptions that would cause other
languages to die would usually be handled by GFA as if nothing occurred, etc.

On top of that, GFA has a usuable interface - no slow and obtrusive GEM
windows, a fast editor, and the ability to access just about any system
routine needed.

Finally, let's not forget the speed factor - GFA can create pretty fast
code for most purposes and the resulting executables run on all 16/32 bit
Atari TOS's and hardware.

Just a few of my thoughts on the subject....

Ari

2183. Will D2M become available in the US?

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 14:46:26 UTC

>the Falcon. Any info will be useful.

Hi Ofir :-)

You subscribe to the list ;-) it was released on th lexicor-list a while ago.
I forwarded th file to you. What it is though (for public consumption) is
an accelerator, not a video card, however it replaces the video chip such that
with a device such as BLow UP or Screen Blaster that you can infact get 1024x768 in 256
colors Non interlaced.

It's called the Speed Resolution Card and it is from H&S It speeds up your
system to a maximum of 40Mhz CPU 20Mhz memory bus so I hear, however users
have had probems setting it at 40/20

Cheers

You can overwrite saved games on Elite II on the ST.

As for enemies being harder to hit, I'm not sure. They're about the
same difficulty on PC and ST, but the frame rate on the ST is slightly
lower, so it takes some getting used to. In space, it's not too bad,
but landing on planets it's a bit juddery. Having said that, I've
successfully landed under manual control. I just wish they'd got Paul
Woakes to do the 3D routines :-)

Graphics-wise, the PC and ST versions seem to have the same number of
colours, and definitely have the same resolution. The PC video link
pictures use more colours, but who cares? Also, the PC version has
texture mapping on the hulls of ships, the ST version doesn't.

To summarize, the PC version is prettier, but I wouldn't spend over a
grand on a PC just for that.

I wish Braben hadn't ruled out a Jaguar version, though...

>near the planet. Of course, I am assuming that you are attempting to land at a
>base on a planet - the autopilot won't land you on a barren planet. :)

I think he just clicked on the planet rather than the base :-)

However, there does seem to be a problem, in that the turn speed of
the autopilot gets slower as the ship gets bigger and heavier (expected)
but it doesn't seem to be affected by the time control (unexpected).

Thus, if you have a ship like an Imperial Courier, which steers like a
bread van, you can get into a position where the autopilot is quite incapable
of steering quickly enough to approach a space station, and you end up
whizzing around it indefinitely until you slow down time a bit. I
haven't tried the PC version to see whether it has the same feature.

Also, sometimes at high time dilation the autopilot will accidentally
slingshot you off the planet instead of approaching the space station.
This can result in your being 250 AUs away before you realise what
happened. (And travelling at a hundred thousand kps in the wrong
direction to boot. So save the game often!)

>One thing that you might be doing wrong is attempting to land on a ship instead
>of the base. This is done easily at an orbiting station where you _think_ you
>clicked on the station itself but in fact clicked on one of the approach
>markers or a stationary cruiser.

It's worth hitting the communications icon to check what you've got
the autopilot set to home in on.

> > Any other hints ?
>
>I started by trading illegal animal skins from Ross 154 (Merlin) to Barnard's

I did the milk run between Barnard's Star and Sol. Robots and Computers one way, Luxury Goods the other (or Fruit and Veg if you can't afford Luxury Goods.)

Sell all your lasers, shielding and missiles for more cargo space. Barnard's Star and Sol are both so safe you don't need them. (Honest!)

Also, don't go to Alpha Centauri. It sucks. Try it if you don't believe me. There's an even worse star system in the Imperium, but I forget its name...

>
>Does anybody have a PLI (SyQuest compatible) 105 Mb. removable SCSI harddrive
>too and hooked it up to the Atari ST with ICD "The Link" ? If so, how ?

I haven't tried a PLI 105M removable but don't see why it would be any
different than the other 4 44M removables I have hooked up variously
to Megas, Falcons, and a 520ST. All were SCSI devices. They have been
hooked up via the ICD Link and the SCSI Pro Utilities, via the scsi
connectors on a FaST drive using ICD Utilities (6.something - I'd have
to check) and using a scsi-scsi2 cable, to the Falcon.

I have had various manufacturers devices - the ones I remember were
Ehman (Mac world), PLI, and a TOAD supplied one with a second drive
mounted inside.

Only thing you may need to do is remove or add scsi termination, depending
where you put the drive in the chain or change the parity setting.

From: csterpin@vub.ac.be
Message-ID: <2q66h0$bcd@rc1.vub.ac.be>
Source record: 187611

hello Falcon coders :)

About the transfer rate to the memory, I think that 70kb/vbl is
the maximum we can reach(for the dsiplay...), but if you use
the dsp and the DMA canal, you can add 20kb/vbl to the display,
then about 90kb/vbl=4.5 Mb/s.
I think that this trick may be useful but I don't try it .
If someone try this, I will be happy to have some comments..

>

Darek has been making emulators for a long time. If you recall, he made
ST XFormer (Atari 8-bit) emulator several years ago. Recently he even
introduce the PC version of XFormer. The Gemulator is a logical step in
the evolution of Atari emulators.

BTW, IF he does have a personal vendetta against Atari, he really can't
be blamed. Atari mismanaged their whol company, and left many developers
in the cold. Most Atari developers (as Atari dealers) have simply
vanished because of Atari's mismanagement.

It's called ScreenWonder, and it's pretty cheap, (available as a hardware upgrade). It's an little box you put on the monitor port, and connect your monitor to this device. After this you'll be able to reach high performance in screen size. I can't give you any more exact detail, but a few of my friends have such an thing, so if you can't get any details from another here at this newsgroup, i'll dig out some more info for you.

>BTW Kim,I've had only one problem with RST on my Falcon,and that was the
>upgrade installation program.
>

Did you read my last mail i wrote to Tod in the NeST/AtariNet area where i'd post alot of stuff i had problems with ?. Like i said, it's just a part of my problems.

Also, i'm willing to accept, that many of the problems are caused by myself, but as i told Tod, i didn't get any help at all. I had Rickard and Mark to talk to, and Rickard only gave even more problems, (ran into a major discussion with him, and now we hardly can't speak to eachother), and Mark didn't know much, (which i didn't blame him, cause he have had RatSoft the same time i had). Unlike Rickard, Mark admitted he couldn't help!

But whats really bothers me, is seeing the way Steve behaves. This guy's should not be allowed to release any programs, unless they'r freeware. Maybe Steve have had problems, but this doesn't allow him to speak like that to his customers.

2210. Lynex Sampler ... Software wanted!

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 22:08:59 UTC
From: an95271@anon.penet.fi
Message-ID: <221317Z03051994@anon.penet.fi>
Source record: 187615

Hi,

I've recently been *given* a Lynex sampler for the Atari ST, on
the grounds that `If I can get it working, I can have it...'.

It plugs into the Atari cartridge port, and requires some software for the
Atari in order for it to work. One snag: No software! I would really like
to know where I can obtain the software for this, so if anyone has any
experience of this thing, and/or the software necessary for it to work,
I'd be *most* interested.

Thanks in advance!

john..

Please E-mail me, as I don't have News access....

It sure is!

:-)

>loop which wastes loads of CPU time - apparently version 4.1 doesn't do this,
> but
>Atari haven't got round to officially releasing it yet :-(

I've heard that MTOS 4.1 doesn't work on plain 68000s, only 68030s and the
like. Anybody with a beta version like to confirm or deny this?

Thanks

Roland.

2212. Re: Gfa Basic 4.0

Newsgroup: comp.sys.atari.st
Date: 1994-05-03 23:01:43 UTC
From: ekl@sdf.lonestar.org
Message-ID: <Cp91Ax.DAy@sdf.lonestar.org>
Source record: 187766

==========
The reason why so many people want a new GFA Basic is because they are used to it and have a lot of code they probably don't wish to port. Basic 4.0 was meant to feature many things, amongst them Multitasking Support, Falcon Video etc. etc. the first Beta I played around with wasn't that bad IMO
==========

If GFA Basic was written correctly in the first place you wouldn't even need to recompile the old programs!! Don't say that programers can't be expected to look into the future, because properly written apps that use REAL OS calls instead of GFA act-alikes would work just fine. I'm not saying to use C - I'm saying that for compatibility reasons, I HATE GFA Basic. I haven't been able to use GFA compiled programs since I was using TOS 1.0

I suggest we find another BASIC .. or do GFA right this time! Personally, for the interpretted monster within me, I'm thinking of looking at Smalltalk, just for fun.

Does anyone know if GNU Smalltalk comes with MVC or any GUI? Or would it be possible to add it? I'd like to play with Smalltalk someday.

Hi, I have a problem, may some could give a hand with it.
I'd like to get new atari computer (falcon of course) and some
other perifericals (hard disk, good monitor). But here in Chile all of
this aren't here yet.
So, I'd like to know the prize to all those things and
the exactly models with some especial especification, because a friend
of mine could get one for me, but I must to give him the informaction
that I told above.
Is there some atari shop at Miami ?
Thank you very much for your help.

Hello,

My name is Jeff Healey and it has been about six months since the last time I used my atari. Just today I booted it up once again. About the time that I stopped using my computer a new telecommunications program had just come out named "Storm". At the time that I stopped the finished product had not yet been released and had a possible release date of sometime in January. I would like to know how to get ahold of the finished product, I remember liking the unfinished product very much.

Thanks in advance,

Jeff

Any programmer who doesn't understand the C code (or any other language) he wrote 2 weeks ago would get fired on the spot if working for professional software developers. This is a reflection on the disorganized state of the programmers thought patterns, not the language! C programming is NOT difficult if you learn it systematically and from a teacher/professor who knows what they are doing. Any programmer who can't understand 2 week old code is guilty of one or more of the following: Poor documentation and commenting, writing "spaghetti code", and poor logic.

2219. UPLOAD: TOSWIN 1.4 + Extensions, version 1.2

Newsgroup: comp.sys.atari.st
Date: 1994-05-04 02:21:20 UTC
From: warwick@cs.uq.oz.au
Message-ID: <2q70r0$qcg@uqcspe.cs.uq.oz.au>
Source record: 187626

Uploaded to atari.archive.umich.edu:

tw14w12b.zoo - binaries for TOSWIN 1.4 + WWA extensions version 1.2
tw14w12s.zoo - sources

Assuming you already know that TOSWIN is a program to allow TOS/TTP programs
to run in windows under MiNT/MultiTOS, my extensions are documented below.

Major changes since version 1.1 is the enhanced TOSRUN protocol.

This makes an excellent TOS/TTP runner for MultiTOS.

TOSWIN WWA Extension
----
by Warwick Allison (warwick@cs.uq.oz.au)
(TOSWIN v1.4, extensions v1.2)

Summary:

1. GEM RUN = Run 1 GEM program from within TOSWIN.
2. X SELECT = X Window System Xterm-style cut & paste.
3. AUTO RAISE = Windows are optionally TOPPED when point-to-type.
4. INITIAL REDRAW = Screen redraw done at start-up (not with MultiTOS).
5. BETTER TOSRUN = Open text windows from commandline with any
font, position, and size; use TOSWIN for
TOS and TTP programs run from the Desktop.

---

1. GEM RUN

The RUNTOS and TOSWIN programs are modified so that 1 GEM program
may be invoked from within TOSWIN when running as an application.

This is only useful to users running MiNT from the desktop with
TOSWIN as the INIT program.

To invoke a GEM program from within a TOSWIN window, use:

runtos -g someprog.prg arg1 arg2 arg3 ...

To invoke a TOS program in a window from within a TOSWIN window, use:

runtos someprog.tos arg1 arg2 arg3 ...

...as before.

This is often useful, for example if you are developing a GEM program
and want to run it, or if you use a GEM program for displaying or

manipulating the TOS files you are developing (eg. DVI_WIND for
viewing LaTeX DVI output, running a RSC editor).

2. X SELECT

The XTerm cut & paste technique is very quick to use:

- Click and drag to highlight a region (as normal TOSWIN).
- Double-click to select a whole "word" of text.
- Triple-click to select a whole line of text.
- Right-click to paste last selected text.

Currently, a "word" is hard-wired to mean:

Any sequence of alphanumeric characters or the
characters "/", ".", "_", or "@".

or Any sequence of whitespace.

or Any sequence of all the same character.

So for example, "warwick@cs.uq.oz.au" could be highlighted with
a double-click, as could " ", "========", "/mint/lib".

To change the hard-wired definition of "word", edit the
CharClass function in "util.c" of the source code.

3. AUTO RAISE

Windows are automatically raised to the top when the mouse
enters them (provided Point to Type is also enabled).

This is another feature that can often be configured on the
X Window System.

Personally, I find it a pain in the neck under X, however, it
is very useful in TOSWIN because under GEM, you cannot drag
or double-click on a window (ie. do all that cut&paste stuff)
unless it is the TOP window.

4. INITIAL REDRAW

When running TOSWIN from the desktop, the MiNT copyright message
and eXtended File System messages mess up the screen. This
extension merely does a screen redraw when TOSWIN initializes.

5. BETTER TOSRUN

In addition to the original feature of being able to open test
windows from the command line via:

runtos someprog.tos arg1 arg2 arg3 ...

You can now set the initial position and size:

runtos -w x y w h someprog.tos arg1 arg2 arg3 ...

and/or the initial font:

runtos -f fontname fontsize someprog.tos arg1 arg2 arg3 ...

-w and -f can be used at same time, but no use with the -g option
described under "GEM RUN" above.

Finally, if RUNTOS cannot find the pipe through which it talks
to TOSWIN, it attempts to execute TOSWIN_W.PRG or TOSWIN.PRG on
the $PATH variable.

To use this feature under MultiTOS, edit your GEM.CNF file so that
the directory containing TOSWIN_W.PRG is on the PATH, and so that
RUNTOS.PRG is used to run TOS and TTP programs, thus:

setenv PATH=.,F:\MULTITOS,F:\MULTITOS\TOSWIN
setenv TOSEXT=TOS,TTP
setenv TOSRUN=F:\MULTITOS\TOSWIN\RUNTOS.PRG

ALSO...

These extensions contain a number of bug fixes from the Net and
found during the extension implementation.

2221. TEDINFO & template

Newsgroup: comp.sys.atari.st
Date: 1994-05-04 03:50:25 UTC
From: jbeeghly@u.washington.edu
Message-ID: <2q7621$3br@news.u.washington.edu>
Source record: 187628

OK, if I have a text field within a dialog, and I wish to retreive the contents of the field, I'd do the following:

```
char temp[80];

sprintf(temp, "%s", ((TEDINFO *)tree[TXTFIELD].ob_spec)->te_ptext);
```

where, tree is the adress of the dialog, and TXTFIELD is the object number of the text field (duuu....).

I have a particular situation, where I wish to retrieve the TEMPLATE of the text string.

I've tried

```
sprintf(temp, "%s", ((TEDINFO *)tree[TXTFIELD].ob_spec)->te_pvalid);
```

but this doesn't work (all I get is the first character of the validation field).

Any suggestions?

BTW I'm using GCC.

2222. Re: Questions about Atari XFormer

Newsgroup: comp.sys.atari.st
Date: 1994-05-04 04:24:55 UTC
From: diehl@io.org
Message-ID: <2q782n$45g@ionews.io.org>
Source record: 187647

The latest version is v2.55, and it's okay if all you want to run is basic stuff and some executable binary utilities ... but games that load under DOS don't fare so well ... in fact, very, very little of what I tried to run would run very well under DOS 2.5. Basic games had very few problems. And don't even try running any demos ... they won't work at all.

In addition, it's not any faster. It still runs at what looks like 1800 baud and is still as slow as a dog. Derek hasn't updated Xformer since he left the Atari platform to work at Microsoft...

We enforce them by:

a) not buying software that does not conform.
b) complaining to developers that do not conform.
c) give the correct example by using the standards ourselves.
d) making them freely available (the guidelines)

Erlend.

Do you have a reason why you're not using something straightforward like
strcpy(temp, ((TEDINFO *).....) ?

>
>where, tree is the adress of the dialog, and TXTFIELD is the object

It is not documented, but it's possible to only put in the first character of
your validation string in a resource editor and all of the rest of the
following characters will use the same validation character. Maybe that is
your problem. Maybe you should also start using more normal ways of copying
strings.

Also, I have found that doing something like this is desirable:

```
char text[80];
...
text[0] = '\0';
((TEDINFO *)tree[TXTFIELD].ob_spec)->te_ptext = text;
```

Then do your form_do, etc, and the text variable automatically contains the string typed in. The text[0] ='\0' is just to clear the string initially.

They (Macintosh style manual including shortcuts et al) are documented
by Apple. Apple also do an 'Internationalizing Software' book (the
title's wrong, but it is one of the Inside Mac series). I consider
that everything we want to do and enforce is inside these two books.

Can anyone provide the correct titles and ISBNs?

Erlend also mailed me the Dutch version of the resource file not found
alert, which we could add to the list:
"Resource file niet gevonden. Einde"

One serious problem: If you miss a % at the end of an integer variable name
then a new (real) variable is created with value 0. A bitch to debug.

Very good on the whole however.

>CPU shifts: 126 %
(It's just the CPU-Speed! So perhaps on heavy calculations running in the
CPU and the cache will be that fast.)

>The upgrade makes your FALCON 030 about 1.2 times as fast as a TT 030 !.
^^^
Do you really believe this?

German ST-Magazin did a test on different upgrades which speed up the
Falcon. And the only upgrade which could reach the TT was the Mighty Sonic.
And only if it uses Fast-Ram! IMHO is the bus-speed still the break in your
computer and without speeding up the ram your maximum speed is limited!

>I found an excellent address database on the net, somewhere, called "address".
>The only problem is that it's in German only, so I was wondering if there is
>a version of it somewhere in English?

I don't know ADDRESS but I know DACAPO which is an excellent address database, too. Originally written in German recent releases contain an English resource file which can replace the German one in order to get an English version. This program is shareware (30.- DM); the unregistered version can handle only 40 addresses.

SAN JOSE, Calif., May 3 /PRNewswire/ -- Atari Corp. (AMEX: ATC) today announced that it has exclusively licensed Jaguar technology to Sigma Designs (NASDAQ: SIGM) to deliver PC cards incorporating the award-winning Jaguar 64-bit technology with Sigma's Reel-Magic(TM) full-motion video capabilities. This deal will expand Jaguar's market reach by allowing more than 10 million users to play Jaguar software titles on their IBM-compatible personal computers by year's end.

"Atari will once again jump ahead of the market by bringing the world's most advanced game technology to a new group of consumers in record time," said Sam Tramiel, president of Atari. "Knowing there would be great demand for Jaguar on personal computers -- we designed the system to talk easily to the leading computer architectures. This has allowed us to move quickly to partner with Sigma Designs to make this happen before Christmas."

"We are pleased to join Atari in its mission to expand the industry standards for video game play," said Julien Nguyen, vice president of engineering and chief technical officer of Sigma Designs. "Jaguar's 64-bit technology will be extremely attractive to the MPC customer base of more than 10 million users. By combining Sigma's Moving Picture Experts Group (MPEG) technology with Atari's 3D animation, we look forward to bringing the hottest video game technology and software titles to the desktops of users worldwide."

Sigma Designs, headquartered in Fremont, Calif., is a leading manufacturer of high-performance multimedia computer products and document imaging display solutions. With the the release of its ReelMagic MPEG controller in October 1993, Sigma Designs redefined affordable video playback for the PC. ReelMagic allows users to experience a new generation of realistic entertainment, education, training, and business presentation software titles with full-screen, full-motion video and CD-quality sound. All Sigma Designs products are sold worldwide through a network of dealers, distributors and system integrators.

Atari Jaguar is the world's first 64-bit interactive multimedia home entertainment system and is the only video game system manufactured in the United States. Jaguar, the most powerful multimedia system available, was recently named the industry's "Best New Game System" (Video Games Magazine), "Best New Hardware System" (Game Informer) and "1993 Technical Achievement of the Year" (DieHard GameFan). Jaguar also recently was given the European Computer Trade Show Award for "Best Hardware of the Year."

Atari Corp., based in Sunnyvale, Calif., manufactures and markets 64- bit interactive multimedia entertainment systems, video games and personal computers for the home, office and educational marketplaces.

Hi!
I have just put an mpeg player for Falcon030 on the ftp site:
ftp.tu-clausthal.de:/pub/atari/falcon/graphics/viewer/mpegplay.zip
It's runs on both VGA and RGB and it's rather slow -- 1 frame/second on
160x100 mpegs -- the DSP isn't used by the player.

bye,
Chris

To use your ST as a terminal, run <InsertYourFavouriteCommsPackage> or the
Atari-supplied VT52 emulator 8-0.

If (X) is as in X Windowing System then I doubt this would run on an ST.
It has a hard time running on a VAXstation, if it comes to that. ;(

>this drive to his falcon.

If I understand his problem correctly, he needs to buy a SCSI-2 to SCSI cable
(around 100DEM), unplug the ICD interface from the disk, plug the SCSI side
of his new cable to the same connector on the disk where the ICD was connected,
and boot up.

Try Australia, mate. Not a bad spot on the map as I recall. But I doubt there are any ST user groups there now. When I left Oz 3 years ago it was tough enough to find groups in Sydney, Melbourne, Adelaide and Perth.

BTW, Andreas... the 'au' in the original posters email address should have tipped you off as to where Wollongong was. :)

>
>Learning C IS difficult. C is the assembler of the 90s!

I agree that there IS a steeper learning curve associated with C than with BASIC but that's not what I was getting at. My point was only that learning C is not THAT much more difficult than learning Pascal. And my generic recommendation to anyone trying to decide which of the two (C or Pascal) to learn is to go with C for reasons enumerated before.

>I know C-programmers which don't understand their code they have written
>two weeks ago!

Ha! That little problem is not the exclusive territory of C programmers by a long shot. I have plenty of GFA code I've written in a hurry that I haven't the foggiest notion what I had in mind at the time. Quite simply, there is NO such thing as self-documenting code. That's a task which must be done by the programmer... or you pay the price later on. ;-)

Source record: 187560

I wasn't commenting on the quality of his product just his motivation, which he has been heard to state to many people. I believe the reason he quit posting to c.s.a.st was due to his constant sticking his foot in his mouth.

And if Atari went bye bye, I'm certain you could kiss GEMulator from Brasoft goodbye. He did the same thing with QuickST. He publicly stated he was only producing it to put TurboST out of business. He even went to the point of declaring TurboST dead, just days before an upgrade to it. Once he felt satisfied in his contest with TurboST he sold off QuickST to the Codeheads. It didn't interest him any more.

He is an interesting character. I love the hype about PCXformer, sorry darek it isn't the first Atari 8bit emulator for the DOS world. And what has happened to his Mac Emulation that no one else could do, hmmm maybe he looked around and saw that there were already several on the market.

I just wouldn't count on his supporting GEMulator long term no matter what the market for it might be. Maybe he'd sell it off like QuickST... but who would buy it.

The deal he made with atari developers was cool. But his marketing is misleading and walks the legal line in many states.

just my $1.12 worth ;)

>IMHO
>.

>-Hutch- @ Fair Dinkum Tech

Also a good hope of running your ST stuff. Personally I believe a much
better route than a GEMulator. Just need them to expand JET out and you could
be up and running in no time.

(JET stands for Just Enough Tos and is part of the MacMiNT kit)

I think I'll stay with my Falcon though, I really prefer it.

Yeah; just phone microprose. They usually ask for your disks to be sent
in so they can confirm you have an original (you can continue to play
off backups or a hard drive, of course) but if you beg sufficiently
they might just send them straight out.

I don't play it as much as I used to; even Emperor level is too easy
after enough practise. Apparently someone hacked the PC version to
provide two levels harder than Emperor... anyone fancy doing the same
to the ST?

You are correct, even if the Falcon was running at 66MHz, without
modification to allow FastRAM you will not get more than a 50% increase in
speed. I suugest running GEMBench on this mod and looking closely at the
RAM access result.

Do you have another mouse you can check on your machine? Sounds more
likely that you are having problems with either your keyboard chip or serial
chip.

Does the 'ALT + arrow' trick still work or is that flakey as well?

>What I would specifically like to know, is how to write a High Density
>Disk Drive cookie.
TOSes after 1.6 will write a _FDC cookie automatically (this is installed by
TOS and is an official Atari cookie) for tyhe type of disk drive installed.
All cookie values are longs and the high byte here indicates the highest
dewnsity floppy
0 = 360/720K DD
1 = 1.44Mb HD
2 = 2.88Mb ED

The low 3 bytes give an indication of where the drive came from. 'ATC' means
Atari line fitted.

So, on TOS 2.06 the cookie will already be there.

Regards
Mark

I don't think you would really worry about sound. My ST setup doesn't
even have a speaker, the only sound I would get would be the keyclick
and bell.

<a bit more stuff deleted>

I think the Gemulator is interesting - some say it's good, other's say it's
a load of rubbish. I would like to have a look at one myself to really
judge, but so far I think I like the idea - esp if it can be fitted
to a laptop PC.

Well ST Review are at streview@cix.compulink.co.uk, and ST User might also
be on CIX (Both are Europress).

The nearest you will get to ST Format is via their publishers, Future
(future@cix.compulink.co.uk). They also have their own BBS (+44) 225 465977.

Branch Always Software
14150 N.E. 20th Street, Suite 302
Bellevue, WA 98007 U.S.A.

Gemulator currently sells for between $129 and $229 here in the U.S.
depending on which dealer you purchase it from and which set of
TOS ROMs you ask for. The list price is $229 complete with TOS 2.06 ROMs
but again, you can go much lower if you supply your own ROMs.

All major Atari dealers in the U.S. carry it:

Toad Computers
Rising Star
Xanth Computers
Purple Mountain
Mid Cities Computers

and of course directly from Branch Always.

The U.K. distributor is ST Club. Not sure what price they charge
due to fluxuations in exchange rates and taxes, etc.

>
>
> Dan

Excuse me goober, I don't recall hiring you as my pr person. The name is Mihocka by the way.

First of all, if you haven't noticed lately, Atari HAS stopped supporting its entire computer line. The only hardware still left are the few machines that dealers still have and can't get rid of. Whereas two years ago I found it virtually impossible to get any Atari dealers to even seriously consider selling Gemulator, today there are several dozen Atari dealers in Canada, the U.S., France, Germany, Holland, the U.K., and Australia who carry Gemulator. Some of them still sell STs, which others now simply sell you a 486 machine with a Gemulator for less than what the ST would cost. So by your silly logic, I should at this point have already abandoned Gemulator (as many ST developers have abandonded their ST products) but instead I'm stil around selling the thing. Sorry to spoil your day. Just last weekend I was down in Portland at a user group swap meet and picked up 5 more customers who won't be wasting their time on Atari equipment any more. Overall, there are now over 1000 Gemulators users with about 150 more being added every month.

With the increased number of dealers, the fantastic reviews of Gemulator like the one last month in ST Applications and the ones last year in Current Notes, what you can expect to see is more Atari dealers phasing out Atari hardware and phasing in PCs with Gemulator, more price competition between dealers, and thus cheaper PCs and cheaper Gemulator boards. Street price now for a board (without ROMs) is about $129. Expect that to drop down to under $100 in the next few months. With the higher sales volumes, I've been able to reduce the manufacturing costs of the boards by quite a bit compared to two years ago, so that lower cost will be reflected in lower street prices. That in turn totally blows away these silly arguments about how you can buy a used ST for $100.

By the time you take your $100 used ST and upgrade it to TOS 1.4, to 16 Mhz, to 4 meg of RAM, to a 1.44 meg disk drive, add color and mono monitors, and add a hard disk, guess what? You've spent between $1000 and $1500 to make that used ST usable, which is about the same as you

would pay for a fully loaded 486 system. Plus the 486 system adds 800x600 color graphics support and obviously full 486 support.

Short of stealing an ST system, you aren't going to find a real ST as cheap as what you can get on a PC and Gemulator. Therefore I don't expect the demand for Gemulator to dry up any time soon and so I won't be dropping support for Gemulator any time soon. If you have noticed I'm releasing a brand new Atari emulator next month. And Atari 8-bit computers haven't been supported by Atari for years, so your argument is total BS.

>could get decent speed, especially if the BIOS and Windows drivers were
>written in native 030 code, where they'd be faster than on the PC anyway.
>

You make some good points. And you're right, part of the ST's screen
graphics routines I did rewrite in 386/486 code in Gemulator. That's what
the "QUICK" option in Gemulator activates, and it's very much like a
Quick ST for the 486.

Now I haven't had a TT in 3 years and never had a Falcon, so you're right,
it's a fat chance I'll ever write a PC emulator for the 68030, although
it could certinaly be done and made pretty kick ass ("kick ass" being
about as well as a 68030 Mac can emulate the PC using SoftPC or other
emulators.) But for as long as I've been hearing about the Falcon I've
been hearing about this mythical 486 emulator that someone was going
to make for the Falcon. What ever happened to that? Did Atari do it? Did
someone else do it? Or was it just yet another vaporware Atari product?

>Open your own! The GUS card is 65Khz (or maybe it was 68Kh) .. it's over
>60Khz and has lots of documentation - I hear its cheap too.

Erm, according to the specs it is 44.1 KHz, 8-bit. It is probably possible
to play 65 KHz with the card, but that means using the main processor to
process part of the sounds, which of course uses processor time.
It is advertised to have 16 channels, but each channel has to be seperately
mixed by the main processor, at least a little bit. This mixing thing was,
if I remember correctly, contained in a document with Ultra Tracker.
btw. this Ultra Tracker beats any normal tracker, so come on Falcon
programmers, we need better Falcon trackers that are even better than the PC
equivilents!

Well, considering you'd need a TEC (or similar) board to use TOS 2.06
on a standard ST, it might be cheaper for him to simply get the TOS 1.4's and
simply swap in the new for the old chips...

Commodore is dead anyway, unless somebody decides to buy it in the last
moment. It is more probable that the Amiga will be bought, but even
this is not terribly probable, there are quite a few interested in the
chips though. HP will hardly buy Commodore, it allready has the chips
licensed, so it doesn't gain anything from buying Commodore. If HP would
REALLY have wanted commodore, they would have bought it already.

>need a driver. You could use MetaDOS 2.3 (free), Extendos or CD Tools
>(commercial), or if you use MiNT you could try the CDROM.XFS driver.

As for software, I believe the ICD Link comes with a suitable .XFS driver (the ICD Pro utilities do). As for MetaDOS, the free one doesn't seem to be able to cope with an ICD host adaptor (though thats probably not the whole story). Also I haven't yet found a free .XFS driver that works with my MSTE + ICD + CD-ROm drive setup yet.

> Also a good hope of running your ST stuff. Personally I believe a much
>better route than a GEMulator. Just need them to expand JET out and you coul

just out of interest is the GEMulator likely to work in the IBM PowerPC?

From the Byte article its seems the IBM PPC will have ISA slots. Surely
a GEMulator would fit nicely in one of those. It then remains to been seen
if any of the DOS/windows emulators on the PPC can cope the the GEMulator
driver.

Sure it would be a bit slow with a PPC emulating a 486 (hopefully),
emulating a 68000, but if it worked it could be worthwhile.

The main gain would come if the excellent Apple 68040 PPC emulator engine
was made available on the IBM PPC. This would provide an excellent base
for an Atari emulator, and of course the TOS ROMs would be sitting on the
GEMulator card, which neatly gets arround any non GEMulator based Atari
emulator copyright problems.

2278. Problems installing MASTERBROWSE 4.1

Newsgroup: comp.sys.atari.st
Date: 1994-05-04 23:33:11 UTC
From: hallvart@ifi.uio.no
Message-ID: <2q9bbn$pin@yrsa.ifi.uio.no>
Source record: 187583

Hi,
I've downloaded "masterbrowse 4.1" document displayer, but I have had big problems installing it. I always get the message "can't find destination directory" or something. I'm using a RAM disk to decompress/install it, and I've redefined the directories. I don't have a hard disk- but is this the problem. Will it only install on a drive D system? I've also tried version 4.0 and with a disk, but I always get the same problem, and the message "fatal error.....restart install procedure.."
The funny thing is that when I exit from it, there's a "doc" folder and the "mbrowse" program and resource files. And it even works!!!!
But I sometimes get the characters on the screen totally blank !!?!?!?!!!
I can see the text if I highlight it, but not otherwise. I think this is after I've tried to configure it, inside the program and save the file or something.
Anybody got a clue to what's going on, and how to do this right?
Any help and/or tips appreciated.
Thanks!

Well, it doesn't speed up the processor only, but it also upgrades the
videochip clock and DSP clock... I wonder if a standard 16 MHz 68030 can
handle 40 MHz, or do you have to install a CPU cooler like the Intel CPU's....

.......(snip).........

I don't know if this would help, but there's a program that I use in my auto folder called "hd_fdc.prg" which changes the steprate of the drive (I use it because when I changed over to TOS 2.06, my drive started to be really noisy!), anyway it adds a "High density" option in the format menu on the desktop.
Hmmmm.... maybe I'm way off subject here....

Here at Uni we first had to learn Pascal. I'll agree, that C isn't that much more harder to learn, but I really appreciated the fact that Pascal teaches you very good stucture. So, do a short course in Pascal to learn good programming stucture, and then learn C as it's more powerful ...

Just my opinion ...

Hello all,

I've been away from the Atari world for quite a while and haven't kept up with the news since about 1989, so I'm hoping some of you could help me out. Things have changed so much that this is like starting all over again...

I have a 520st with tos 1.0 on rom, 2 single sided drives, and one double sided drive. Could I get your recommendations on mouse driven wysiwyg word processing software for this old machine? I have always used stwriter without complaint, but now i'm trying to teach my grandmother about wp, and it occasionally(!) gets complicated with all the control codes & such.

Also, I have taken apart all three disk drives and noticed that the card in one of the ss drives seems to match the card in the ds drive. Do any of you know if this is actually correct? Could I replace the ss mechanism with a ds pc-type drive and actually get it working?

Thanks for any help,
chris

There is something I'd like to know about the MAGE kit, and that is, does it provide any hard-line includable code besides it game design engines? (i.e. anything besides the sprite/map/etc. designer?) What I'm getting at is if there is anything in the package that could be used for something _other_ than (or related in some way to) games. I do like designing games, but I also design other things as well, and am just wondering if there are any provisions in this package where I could use some of the code for other purposes.

Okay. I've diligently followed every thread on this subject, hoping to see my question answered. I've tried three times to figure out the partially translated documentation, to no avail. Permit me, therefore, to be blunt:

I'm running Uniterm 2.0e on a MSTe via the MODEM1 port. Will this package do me any good? What magic do I have to perform to use the higher baud rates in Uniterm?

[Oh, and lest someone suggest I switch comm programs: if I ever get NVDI and a screen resolution higher than 640x200, I'll look into CoNnect. Until then, I'm sticking with what I've got.]

I find it hard to believe that it is a "Mac-C" emulator - commercial
code is never released in a "c" form (for the Mac anyway), and it would be
impractical to implement some sort of "search for c-compiled-code" since there
are several compilers that probably give different C-to-Assembly translations,
not to mention the things that optimisors will do to code.

>68K power user applications! And this info is first hand, NOT hearsay.

Thats true as far as it goes, so long as you realize that PPC _does_
have a FPU (a VERY fast one) and that Apple has simply chosen not to emulate
it (or interface it rather). I guess they figured since there was a public
domain version of SoftwareFPU, they didn't need to. Not to mention it would
encourage people to upgrade to the native-mode software as it comes out.

>After a long discussion on the topic with Apple representatives, the best
>advice they had was that they had heard of a software patch that was many years
>old, used specifically for fooling programs into running on Macs without an
>FPU. They recommended emulating that program first. Unfortunately, my chances
>of finding such a hacker tool are nil.

Actually, SoftwareFPU is available on all mac archives - its even on
the apple gopher server in their apple.support.area./etc/etc . Heck, I just
downloaded it into my account so we can distribute it at our computer service
deptartment, so if you want/need it, I can email you a copy (its binhexed).

>BUT this is not about MACS, other than to point out that the emulation is by
>no means complete.

Unfortunately, it is as complete as apple wants to make it. I wonder if they will release the '040 emulator? It sure would be nice to use if someone should be become brave enough to make an atari PPC board...until native apps came out. In fact, I was wondering - is the PPC compiler simply a 680x0 assembly to PPC machine code compiler, or did they require an intermediate 680x0->PPC assy->PPC machine code? In either case, from the sounds of it, the conversion to PPC code is supposed to be rather painless. Of course, knowing Apple's propensity for obfuscating jargon, they may simply have been referring to the fact that if the native-mode compiles _don't_ compile, then it will still run fine under emulation. <shrug> Anyone care to throw out an informed opinion?

> believe. It was pretty steady for awhile at 7, now
> down to 4 7/8?

Rumors and panicy people. 6 is a healthy price, always was. The jump to 12 was a fluke, and was because a buch of people bought in late. Those of us smart folks that bought a 1/2 and sold at 11 thank them greatly!

Like I said, 6 is healthy. The drop below is expected, because so many overvalued it. Then, there are some who haven't seen what they were told woul happen, even though nothing big has supposed to happen yet. People are sooo stupid.

I expect Atari stock to be above 9 by the forth quarter. It'll fluctuate here an there. If it nears 4, BUY! It won't slide under 3 1/2. I doubt it'll go anywher over 14, but then again, by the forth quater, people may think that Atari's the mother load again, and it could go as high as 17... but it'll settle around 9 again.

Mark my words!

Sigma Designs (NASDAQ: SIGM) has licensed the Jaguar technology
to make a Jaguar PC card for multimedia PCs and will release
their card before Xmas '94. It will run Jaguar CD-ROM titles,
but other possible uses aren't clear yet (except that the card
also has the MPEG playback hardware built-in). Atari and Sigma
just announced it on Tuesday.

>atari continue the same as ever? and how is the falcon doing at the moment?

Commodore has been in deep for quite a while. Atari, while not
thriving, is a company that's still worth a pretty penny. They
haven't posted profits for a few years now, but with the Jaguar
now expect to be posting quarterly profits as soon as 3rd Qtr.
'94. Also, most of the losses they've reported the past several
quarters have been 'paper' losses (writing off existing
inventories/etc.). Commodore doesn't really affect Atari in the
U.S., but in Europe it could certainly mean more Jaguar purchases
if the CD32 dies off, plus POSSIBLY very slightly higher Falcon030
purchases. Since around Xmas '93, Falcon030 purchases have
reportedly increased significantly, but it is still by no means
selling terrifically.

>What exactly is an "Atari Transputer Workstation"?

It's really F-ing cool, that's what! <grin> Several years
ago, Atari U.K. sold the ATW, which is a parallel-processing,
RISC-based workstation. A transputer is a complete RISC-based
computer on a single chip and the ATW could have up to 13 of
them running simultaneously (1 built-in + up to 3 'Farmcards'
with 4 transputers on each). A fully decked-out system w/
13 transputers cost around $35,000-$40,000. It used the
(modified) guts of a MEGA 4 ST as the system 'housekeeper'
had a UNIX-like OS that was written specifically for the
parallel-processing transputers called HeliOS (there's even
books on HeliOS!), plus has enhanced graphics (high-rez,
24-bit display with an enhanced blitter chip called the
'Blossom' chip). Fully decked out, it delivered about 1/5th
the power of a basic Cray supercomputer. Not all that
many were sold, but most of the ones that did ended up in
universities and research labs (and mostly in Europe). I'd
LOVE to see one in person!

"b> I get the feeling that its all down to a lack of communication.....all
"b> the complaints about orders seem to come from Europe... I had problems
"b> with my order,but nothing on the magnitude of you guys...

Yep!.. And thats a shame because if we can't get our orders in resonable
time we can't rekommend others to buy it.. There is soon a upgrade on QBBS
and there is also two new BBS program one called ProBBS from UK and Octopus
from Holland. So if he can't get the orders to work i think he would loose
some customers here in Europe.

Regards Bertil Jagard.

Hi

Anyone know how I can get in touch with Best Electronics, regarding a catalogue or something? Here in Briatain, they are regarded as one of the best people to buy Atari spares/sundries from.

e-mail address preferred, but not necessarry

Thanx

Danny.

```
The country code for Germany is ++49. Accented 'u' and the Eszet can be
replaced by 'ue' and 'ss'. To avoid delays of delivery, one should use the
new five-digit zip-codes. The address now reads

Obere Muensterstrasse 33-35
D-44575 Castrop-Rauxel

I don't believe that Atari ever placed ST BASIC in the public domain. Even
though they don't support it anymore it's still not free.

Besides, ST BASIC was so bug-ridden and archaic I can't imagine why anyone
would want it. GFA _did_ place GFA BASIC 2.0 in the public domain and it is
much more powerful than the old ST BASIC. You should be able to find the GFA
BASIC interpreter at most any ftp site or bulletin board.

You can't tell. The newest version I know of (v3) has fixed the bugs
which corrupt the screen upon completing the game by reaching Alpha
Centauri, and also the "faces" of your fallen enemies. Of course, they
didn't bother to fix the too much corruption bug, or the powergraph
bug (whereby you can overload the powergraph causing the game to
bomb out).

That's why you should define your variables up front with a DEFxxx statement.
DEFINT "a-z" defines all variables that begin with an alpha character as an
integer. When you need a string, boolean, byte, etc, variable just overide
the DEF statement by appending the appropriate suffix ($, !, |, etc).

Good advice! Unfortunately, it that was always the case, pretty much
everyone would be buying PCs or MACs instead of Atari machines. Software
for the ST is as hard to find as a needle in a haystack, and your choices
are extremely limited (assuming you can 'find' the software first).

[even more stuff deleted].......
>

: VERY bad and not exhaustive (a feature again ?:), but the gane
: has great potential . So please tell me ALL your advices and I'll
: try to keep you up to date of mine.

Ok after reading this I have a few bugs I have discovered so here they are..

1.. Pressing the tab key locks up hte game. (Very annoying)
2.. Using the Hyperspace Analyser on your own cloud bombs the game. (Also annoying but easier to avoid..)

Also in my opinion the best way to kill things is to pause the game when the ship is on your screen (by pressing escape. This is how I found out about the tab bug) and targetting the ship. Then just auto towards it shooting lots. It works for me against most ships. Sometimes it helps to run away a bit and then re-attack from a greater range. This is advisable against small fast ships that can trun faster than your autopilot.
Apart from the bugs the one gripe I have with the game is the fact that the only practical way of killing a ship is to use the autopilot. In my opinion this takes a lot of the fun out of the game...

Any comments or bugs other people have would be greatly appreciated..

Dave.

>LOVE to see one in person!

I saw one "in the flesh" at an Atari show in London a good few
years ago. I think it was the same show where they unveiled the
TT in the UK. Anyway, if I recall, when I saw the thing it
wasn't doing much of anything, just a couple of windows on a
19" VDU. The windows were just running a Helios shell which
looked pretty much like a Unix shell. I messed about with such
complex commands as 'ls' and 'pwd' before being shoo-ed away
to make room for someone else. :)

I remember being absolutely awstruck by the specs. mind you.
I didn't believe a word of them at the time, but with hindsight
they were probably mostly true!

Cheers, Steve

"To - MAAA - to" or "To - MAHH - to".... Different strokes for different folks..... Should be the same, no?

Anyway, I just tried it out and the same thing happened....

my validation set is aaa999 (three letters and three numbers), and the only thing that spits out is a single 'a' character.

I was told (by someone else) that it may be an undocumented feature that the returned value will only yield the first value. That's great if my template is the same character in every field, but what if it's mixed (like what I am doing?)

2325. WinX with MultiTOS ?

Newsgroup: comp.sys.atari.st

Is it possible to make Winx install when you are running Mulitos?

Winx seems to run on boot-up, but is not installed when the desktop
appears. I am using Winx 2.2 and mint 1.10.

I realise that Winx is designed for normal Tos, but I would like
some of the features it provides.

Thanks,

Paul

I thought that the purpose of WinX was to give TOS the features which are
already in MultiTOS (except Multitasking obviously), such as dragging
windows off the left-hand side of the screen.

But as I use neither, I am only going on hearsay.

The difference is that strcpy will be MUCH faster than using sprintf. I can't fathom why you'd want to use sprintf for copying a string.

With mixed frields, you have to specify all of them except for the last ones. That is to say that, "9999aaaa" and "9999a" work the same. Aside from that, I don't know what your problem is.

>throw out an informed opinion?

Well, not that this whole thread has any place in c.s.atari.st, but...

Apple's PPC 680x0 emulator doesn't compile at all; it's interpretive.
The interpreter takes each 680x0 call and makes the equivalent
PPC call(s). System calls are sent to the system, which may or may not
make any 680x0 calls depending on wether or not that part of the system
was ported to native PPC code.

Interestingly, Softlogic's SoftWindows 80286 emulator does dynamic
recompilation - it takes a chunk of 80286 code, converts it to PPC code,
and runs that code as if it were any native PPC app. Then it does another
chunk. That means that, especially for loops small enough to be recompiled
as one "chunk", (don't ask me how big a "chunk" is) the windows emulation
can (sometimes) be considerably faster than the old mac emulation.

Disclaimer: I'm not an expert in the subject area, I've just been

Well you only needed to edit the sector size with very old versions of
Minixfs. This usually didn't work due to bugs in the driver software.
Later versions (i.e later than 0.55) should automatically take steps
to access larger partitions properly. I would sugest you edit the
size back to the original and try minit (without the -b option).
A block is always 1K irrespective of the sector size of the disk.
Please mail me if you have any more problems.
Regards, Steve.

From: anisko@usdtsg.DaytonOH.NCR.COM
Message-ID: <1764@usdtsg.DaytonOH.NCR.COM>
Source record: 187368

To the person who was asking about ZOO not being on GEnie, apparently
it is. Here's the file listings (and file numbers):

20950 ZOOSHL06.ARC X S.YELVINGTO2 910915 14848 313 40
Desc: GEM shell for ZOO archiver (0.6)
25388 ZOO214.LZH X W.PIKE 920822 81408 540 40
Desc: Version 2.1.4 of ZOO File Compressor
20461 ZOO21BIN.ZOO X ALEX.F 910810 112128 349 40
Desc: Create & extract w/version 21 of Zoo

Don't even ask me why ZOO21BIN is compressed in ZOO format, since
it's, uh, kinda difficult to uncompress a ZOO file without it's binary :-)
However, the ZOO214 can be handled with LHArc...

Are you sure? Check its existence with the WINX.CPX. It's there... it
just doesn't do much to MultiTOS's AES. Perhaps a later version will,
but since Atari wasn't interested in applying the patches to their std
sources, I doubt the WINX author is quite so enthusiastic now.

A shame... WINX is almost worth using TOS for ;)

Anyone knows anything about what's expected out of Symantec anytime soon, if at all?

It came up on my model yesterday (was pretty strong the day before too). I told the people on my e-mail list, and then bought some. A few hours later, the stock jumped 3/4 before giving back 3/8. There was one announcement today, but it was technical (I believe), and I am pretty sure it was well before the jump.

I am pretty sure about this one. My model has been right on it 6 out of 6 times in the past 6 months or so (this triple 6 not intended; that's the truth :)). In the last 2 times, I actually bought and sold at a profit (people on my list will vouch for me).

-Ron

I've been using maxidisk, the ram disk that also compresses files. The archive file on a.a.u.e. is v1.5, which worked fine with TOS 1.4. Now that I've got a TOS 1.6 machine, it doesn't work well, corrupting files fairly often. Given that it's dated 1987, this is not surprising.

Anyways, I remember leafing through a PD disk catalog a while back and seeing that maxidisk 2.0 existed, and was compatible with new TOS versions. If anyone has this program, I'd appreciate it if you'd upload it to a.a.u.e.

>us that the company has posted a loss for the four most recent quarters.

>Is there any reason to think that atari might be heading in Commodore's
>direction? If not, why not?

correct. Atari had losses for their last few quarters. However, this
was not a surprise to financial analysts. Atari has practically dropped
their computer line (unoffically) and is now favoring the Jaguar system.
By doing this, they had to overhaul their operations. Since last year it
was well know that Atari won't be in the black until 4th quarter of 94 at
the earliest.
I do not think they will follow Commodore because there is more interest
and hype for Atari. Commodore's attempt at the interactive CD industry
failed. commodore really did not have the resource or any serious backing
to their product. At the very least ATari has Time Warner.
With ATari and Sigma Reel's latest annoucement, I think ATari's profit
potential can be fairly large.

What would it take for us to get you to write a 486/Windows software emulator
for the Falcon? Begging? Groveling? Secured deposits for purchases?
Considering the innovations you made with QuickST, and the progressive speed
improvements that you made from version to version of Xformer, I'm sure that
you could make a PC emulator for the Atari that was much better than SoftPC.
I'd buy one in a heart-beat, especially if it emulated a 486 and had parts of
the BIOS and the Windows graphics driver written in native 68030 code.

I recall in another message in this newsgroup mention that the 80286 emulator
for PPC compiles code in 'chunks' and runs it in PPC native mode, which can
speed up loops dramatically, etc. Is that really true? Do you do that with
GEMulator? Would it help with that and the 486 emulator for the Falcon?

We would honor you profusely if you were to do us the great service of writing
a good 486 PC/Windows emulator for the Falcon and TT.

I just went out today and played around with the Power Macs today and
was QUITE impressed! SoftWindows was running on the big one (8100/80???)
and ran at a VERY respectable speed (generally AT LEAST as fast as your
average 486 machine). And some of the native PPC applciations were just
INCREDIBLE! Too bad the Power Macs don't have the built-in digital
recording capabilities of the Falcon030, or I'd drop mine in a second!

2351. Falcon screen display

Newsgroup: comp.sys.atari.st
Date: 1994-05-06 07:37:36 UTC
From: csterpin@vub.ac.be
Message-ID: <2qcs40$2f8@rc1.vub.ac.be>
Source record: 187779

hello Falcon coders

Some people talk about the max transfer rate we can reach
with the Falcon in graphics display (about 70 kb/vbl).
What do you think about using dsp-DMA for display some
graphics, it can add 20 kb/vbl ...
But maybe the use of the dma will slow down the 70 kb/vbl
display reach by the 030...
If some people have comments, I will be happy to hear...

Dear All,

Does anyone have a MIDI SAMPLE DUMP package that will dump samples from
an ATARI ST to a TG500.

Thanks In Advance,
K.Symonds

2353. Installing MinixFS on a >16MB logical drive

Newsgroup: comp.sys.atari.st
Date: 1994-05-06 08:04:42 UTC
From: marbud@u14001.rsv.svskt.se
Message-ID: <1994May6.080442.14472@rsv.svskt.se>
Source record: 187785

I have problems when installing MinixFS on a large logical drive..

I can't get it to use the upper 500MB.. :-/

In the manual for MiniFS ther is some info about how to install it on a
large logical drive. You should change the sector size to 512, use a harddisk
driver that supports zeroed bootblocks etc..
I have changed my 8kb/sector to 512bytes. I have ICD as driver.
Then figured out the number of blocks on the drive. (is 8k/512*nb_clusters_on_drive the
right way to calculate this?)

Now i run

minit -V -z -b num_blocks -i65534 e

but it only replied:"Can't find sector 8".

There is no problem installing a small MinixFS on my e: drive, but
it't not as much fun with a 16MB filesystem on a 530MB logical drive.. :-/

Any ideas?

Thanks in advance Martin

2354. Re: WinX with MultiTOS ?

Newsgroup: comp.sys.atari.st

>but since Atari wasn't interested in applying the patches to their std
>sources, I doubt the WINX author is quite so enthusiastic now.

Currently he is working on version 2.3 which is expected to provide something like window shading.

Unfortunately I don't know what that is. Some of the most popular shareware programs in Germany already support the new features of winx 2.3

>...
>With the increased number of dealers, the fantastic reviews of Gemulator
>like the one last month in ST Applications...
Well, you wouldn't expect a bad review from the magazine produced by
one of your distributors. Stuff sold by the ST Club always gets good
reviews, funnily enough. Even things like ImageCopy, which has always
lagged well behind the cheaper and better GemView.

2356. CD-ROM now working!

Newsgroup: comp.sys.atari.st
Date: 1994-05-06 09:37:38 UTC
From: djs@jet.uk
Message-ID: <1994May6.093738.1230@jet.uk>
Source record: 187786

Last week I posted a tale of woes about getting my CD-ROM going; none
of the drivers I had would talk to it (MetaDOS, ICD Pro, Atari CDROM 0.6).

Yesterday I got ExtendDOS, and it worked straight away! The manual says
no PhotoCD support, though :-(I would have thought that PhotoCD would
be the main application for Atari + CDROM, given that we won't get much
Atari-specific stuff.

In case it helps anyone else, this is the setup: Falcon030 + NEC 2xi CDROM.
The SCSI-II bus also carries a hard-drive and streamer. The driver is
ExtenDOS 1.11. The NEC 2xi is an internal drive, double speed, and costs
160 quid + VAT (ie about the same as an Apple CD300).

The same. There has been a slight ermm, clash of personalities on CIX in
the STreview conference. The editor of STR raised some IMHO valid comments
about the quality of editorial on STF ie it's very inacurate which is often
true. Clive came back with a line to the effect 'I don't give a f**k about
STR'.

From: nproest@et.tudelft.nl
Message-ID: <1994May6.121449.3316@tudedv.et.tudelft.nl>
Source record: 187788

About a half year ago I saw a review of Ambermoon in PowerPlay.
They did mention the program would come out for PC and Amiga (so No ST).
Just a while ago I coincedently saw an add in which the offered Ambermoon
for ST! Not really, you could reserve a copy for yourself already.
Whom am I to believe? PowerPlay, or the add? Is Ambermoon ever to be
released for the ST, and if so when?

Thanks in advance,
Niels Roest

2359. PhotoCD production in UK: Where?

Newsgroup: comp.sys.atari.st
Date: 1994-05-06 10:21:33 UTC
From: djs@jet.uk
Message-ID: <1994May6.102133.1394@jet.uk>
Source record: 187787
Cross-posted to: uk.misc,rec.photo,comp.sys.atari.st

I want to get some film transferred to PhotoCD, and I've tried several places without real success. The small, local photo shops, and bigger shops like Boots all send off to get them done (Boots send to their own place, the others send to Kodak). Either way, it's a 2 week or more turnaround.

Anyone know of a UK place that does a quicker turnaround? Especially in the Thames Valley or London? Before I went in to ask, I assumed that Boots would have PhotoCD equipment in the shop, for immediate turnaround...

2361. Re: Quantum ELS ID Problems!

Newsgroup: comp.sys.atari.st
Date: 1994-05-06 11:32:31 UTC
From: sheppard_r@ix.wcc.govt.nz
Message-ID: <2qd9sf$6d0@golem.wcc.govt.nz>
Source record: 187743

ICD's FAQ on Quantum ELS Drives....

Quantum ELS with The Link: Problem and Solutions for drives made in 1992.

The following information is for owners of "The Link", a SCSI host adapter for Atari ST computers, and Quantum ELS series hard drives with firmware older than version 4.05. ELS drives with the newer firmware have not been shipped by Quantum as of this writing and probably won't be until sometime in 1993. Firmware version 4.05 or higher is required to disable parity on an ELS drive. Parity is not supported with The Link. Unfortunately a TT, a Falcon, or an ICD host adapter which does support parity is also required in order to disable it so be sure to have one of these available. The following ICD host adapters do support parity: Advantage ST, Advantage Plus ST, AdSCSI ST, AdSCSI Plus ST. The other models do not.

Included with this file are a special version of BOOTFIX.TOS from ICD and two other files from Quantum which will allow those with the knowledge and proper equipment to make their own 4.05 ROMs. ELS_S405.HEX is the 4.05 firmware code in Intel Hex format. ELS_S405.BIN is a binary image of the firmware ROM (binary format). These should have a checksum of $2E00 and be programmed in to 27C512 32 pin PLCC EPROMs or OTP EPROMs. Quantum has used Atmel AT27C512R-15JC OTP EPROMs so 150ns is probably more than sufficient.

An alternative is to call Quantum, explain that you need parity disabled on your ELS drive, and tell them that you need new firmware of version 4.05 or greater to support this. In the USA you can call 900-740-4433 to request new ROMs. Warning! You will be automatically charged for this call and I am not sure of the rate. If you are "blocked" from 900 numbers, try 408-944-0410.

Once you have the new ROM, carefully replace the old ROM, which is the only IC in a socket on the ELS drive PCB. Then connect the drive to a SCSI port which does support parity, boot the computer and run the new BOOTFIX.TOS. After that, the drive will permanently have parity disabled and work with The Link. Our hopes are that dealers or distributors will offer this service to their customers since they will have better access to the required equipment.

Thanks for supporting our products and good luck!

Taken from the ELS.LZH that is provided by ICD on GENIE...

I'm running the PD library for "Atari Users Of Norway".
Since I'm offering file-copying to all members (instead of just dupplicating the whole disk) - I'm looking for another, faster media to transfer the collection to. I'll propably need apx. 2-2.5 gigabyte diskspace to fit in the whole collection.
I've listed the alternatives I know below, feel free to add more alternatives.
Could someone please add a little more info for me. What is the most cost-effective media (incl. hardware) - and how about reliability?
I would not mind a discussion on this topic!

Syquest 44 mB 5,25" removable
Syquest 88 mB 5,25" removable
Syquest 105 mb 3.5" removable
Flopticals (21mb?)
650 mB optical drives
650 mB WORM disks
Harddrives - 2.5gB or more

BTW - I'll run it from a Falcon030.

Thanks!
Stein Arne Jensen

Extracting an selfextracting archive is an easy thing, if
you have the right computer.

I've got some MS-DOS exe which contain ATM-Fonts (GhostScript!:-).
The readme said:

Extract this files by typing filename.

Optimistic as i am i looked at the header, saw a SFX and
extracted the files with lharc-shell (Atari).

Why do i post this?

Well, maybe someone has the same problem and hadn't thought about
this. (I wouldn't believe it myself if i hadn't seen it)

Axel Kielhorn

I doubt it. Microprose announced some time ago they had no plans for any new
Atari versions of their products. Of course, that could change if sales of
Atari computers suddenly went through the roof... yeh, right. :)

From what I have been able to ascertain, they (Apple) use a direct 680x0 to PPC code compiler architecture.

> In either case, from the
>sounds of it, the conversion to PPC code is supposed to be rather painless.

Yeh, I think even Apple was surprised at how well the early PPC compiles worked. From what I have read and the info I've gleaned chatting with other devs, it seems that, by and large, most 680x0 code recompiles into PPC code with very little massaging... and some not at all. Of course, recompiling for PPC and designing and writing code to specifically take advantage of the PPC's power are two different things. :)

But I digress... an Atari PPC board would definitely be way cool. :)

Can anybody tell me what spec a monitor has to be to be able to cope with
running RGB modes.

I think the figures for my monitor are....

Vertical Rate : 40 - 90 Hz
Horizontal Rate: 30 - 48 kHz

I may be wrong though, I don't have the manual in fornt of me.

So, is my monitor capable?????

Neil.

> Ah? So where's the MIDI ports then?

Mea Culpa! Correction, it emulates all the hardware, less midi ports (and currently joysticks). The Gemulator does support sound through a Soundblaster card (which does support Joysticks and MIDI) so both of these could be remedied (sp?) in the future. Darek, are you out there listening? :)

Source record: 187707

Hi Darek!
First of all, Atari still makes both the Falcon and the TT.
Ataris on dealers shelves are new ones being manufactured.
I love my Falcon and I am sorry you have a problem with Atari.
Right now there is a 20Mhz 286 emulator for the Falcon from
Compo Software and they are the ones working on the 486
emulator. Compo has always been pretty good at support and I
think it will come out.
How compatible is GEMulator, anyway? I mean as far as copy
protected stuff? I thought about getting GEMulator but had
doubts about how fast it would be on a 486SX-25 (the only IBM
I could find for under $1000). I feel that a Falcon with
a 286 emulator would be better (I've heard that the emulator
run at about 486SX-25 speed anyway /source: David Troy/).
And the PC was at $1000 with no sound card. I love the Falc's
sound capabilities.
Anyway, I think your post was a little mean-spirited regarding
Ataris. Posting in an Atari group that Ataris are doomed as
a fact is flame bait. Have fun at your evil employer's :-).

>use C - I'm saying that for compatibility reasons, I HATE GFA Basic. I
>haven't been able to use GFA compiled programs since I was using TOS 1.0

Well, as a long-time GFA user, I'm well aware of it's foibles (such as very sloppy memory management), but I cannot imagine why GFA would give you such problems with any TOS over 1.0 (unless you've never upgraded to newer GFA versions, of course).

Heck, I still use GFA 3.5 (I find 3.6 a bit too quirky) on my TOS 4.x Falcon and it works admirably well. It does require a few workarounds with some of the TOS 4.x idiosyncracies and it does NOT work with MultiTOS, but all in all, it's still very usable and very pleasant to use on the Falcon.

>I suggest we find another BASIC .. or do GFA right this time!

No argument, there. HiSoft is a contender but I'd much prefer a new GFA. ;-)

Darek is the expert here, of course, but I really wonder if a 486 emulator in
software-only is feasible for the Falcon.

Keep in mind that Insignia's SoftPC with Windows is abysmally slow even on a
fast 040-based Mac and their SoftWindows product emulates a 486SX-25, at best,
on a _very_ fast PowerMac with PPC.

How fast could one expect such an emulator to run on the relatively dog-slow
16MHz 68030 in the Falcon?

Then again, I'd LOVE to be proven wrong on this one, too. :)

Well, please DON'T dump your Falcon030 just yet! :)
=====
But just FYI, if you request the 'AV' option when purchasing a PowerMac,
you get the digital recording capability as well as a bunch of other nifty
audio/video features. I think the AV option is only about $300 or so,
depending on the PowerMac model in question. The only odd thing is that
you must buy the AV option at time of purchase; it's not available otherwise.

That is incorrect. I think you are too cynical. GEMulator was reviewed by an independent freelance journalist. ImageCopy does not lag behind GEMView and is only 2 pounds more expensive (you get a printed manual). ImageCopy is much better than GEMview at printing and is first and foremost a snapshot utility. I know many people who use both for different tasks.

As far as I know it has always been put to use. The signal is mixed back onto
the output, so if you have some other mono source of audio you'd like to hear
though your ST monitor, just jack it into the machine while its running. Now
that my stereo has moved to another room, I'll probably be doing this with
the soundcards in my PC.

Yes, but... This lets yuo switch between version so that any incompatabilities
can be solved.

Also, the improvements in TOS2.06 make the extra (minimal)cost worth-while.

OK, so it could still be improved but it's a lot better than any previous
version.

One thing I would like to see is 8*8 characters used in menus when in hi-res.

Try sending an email inquiry to Christof Schardt at Christof_Schardt@f.maus.de since he is the primary author of the 'ergo!pro' package (along with Gregor Duchalski). I considered marketing ergo! in the US at one time but that eventually fell through. Here is some info about it that Christof sent me:

- completly new program,
- totally GEM-conforming,
- full text of GFA-manual (ACC) available in a window,
- Analyzes and manipulates GFA-tokencode, so you don't need the LST-file,
- increased speed of all processes (up to 15 times faster),
- all functions improved.

It looks like a very handy product for GFA users. Alas, no English version yet.

>no PhotoCD support, though :-(I would have thought that PhotoCD would
>be the main application for Atari + CDROM, given that we won't get much
>Atari-specific stuff.

Although the ExtenDOS manual says no photoCD, some drives will
automagically recognise the XA format, so you can access photoCD
without any special effort. Many of the NEC drives are like this,
including the NEC 38, 74-1 & 3Xp, so yours may work too. This
however is only single-session; if your drive supports multi-session,
the driver has to do some additional work, and this is device-
dependent.

The next major release of ExtenDOS will support multi-session
photoCD on as many drives as I can get info for.

Hi! Here's a few questions concerning atari falcons

-What are the street prices now for various configurations?
(with and w/o hard drives, etc)

-What sort of monitor is needed?

-What is the DSP used for?

-Where does one buy Falcons?

-Does Atari have plans to bring out any new computers?

Thanks for any info!

-Michael Hicks

K. Langlois) writes:

>GOOD! You'll need it! You need 8MB to emulate a 4MB ST! RAMDISKS?

Wrong. The latest version of Gemulator requires 1 meg of RAM above
the amount of ST RAM. Therefore it takes 5 megs to emulate a 4 meg ST
or 9 megs to emulate an 8 meg ST.

>Under a TT you can get 1280x960 and if you get a VME card, even higher.

Using a graphics card with a TT isn't a simple plug and chug
operation as it is on a PC. Read the March and April 1994 issues of
Current Notes for a review of using the NOVA, CyReL Sunrise, and Crazy
Dots cards. Also, the cost of a TT with 16 megs of TT RAM and a
graphics card is about $1500US more than a 486DX2-66 PC with 16 megs,
VESA local bus graphics and a monitor.

>Not MINIX!

Why would you want to run MINIX under an ST emulator when you can get
PC MINIX and have it run much faster?

>Only the Yamaha sound, which is FM modulated square wave with effects
>oscillators. Show me STe DMA sound .. or better yet, Falcon sound.

Add up how much software supports Yamaha sound and how much supports
DMA sound. It's not worth the effort to emulate DMA sound.

I have GEMulator and am happy with it (and the 486DX2-66 PC :) I've
got the best of both worlds, power stuff can be done in native mode,
the other in emulated ST. GEMulator saved me quite a bit in
buying equivalent software for OS/2 (My PC OS of choice). The
operative word is "buy", I'm not a pirate!

> would dial.

I had a Zoom connected to my ST for awhile, so rest assured that it is
possible.

First, get rid of Serial Fix, and get hsmoda02. It is faster and better.
Next, you should strip out any init strings in the modem programs you intend
to use. Then, use one of them to program your modem once, and write the
setup to non-volatile memory. There is no need to reprogram your modem
every time you run a program (another hint: never have your modem on when
you first run a new modem package, as they usually have some large silly
init string that will mess up your preprogrammed setup).

You should try the following setup:

at&f&c1&d2&w

This should get rid of your carrier detect problem (turn it back on in
Connect), and you should be ready to go. Hope that helps.

> I'm running Uniterm 2.0e on a MSTe via the MODEM1 port. Will this
> package do me any good? What magic do I have to perform to use the
> higher baud rates in Uniterm?

Yes. I have noticed slight improvements over Serial Fix 2.0 within Uniterm during Zmodem downloads (using GEM RZSZ 2.28). You cannot access anything higher than 19.2kb on MODEM1 without hardware mods. You should try MODEM2, though. On it, you will be able to access higher baud rates by using the configuration utility that comes with HSMODA02 (it maps higher baud rates to the standard selections, so 19.2 would really become 57.6 or whatever). You might have a buggy MODEM2 (like me) though, and prefer MODEM1. You can fix MODEM2 by following the instructions in fser09b.lzh on a.a.u.e. You will need a GAL programmer, though.

> [Oh, and lest someone suggest I switch comm programs: if I ever get
> NVDI and a screen resolution higher than 640x200, I'll look into
> CoNnect. Until then, I'm sticking with what I've got.]

True. Connect is great on a MegaSTE with NVDI and a mono monitor. Well worth the money (for Connect registration, NVDI, and monitor), IMHO.

> Syquest 44 mB 5,25" removable
> Syquest 88 mB 5,25" removable
> Syquest 105 mb 3.5" removable
> Flopticals (21mb?)

All of these are too expensive for the sizes you list above. The number
of cartridges would be a real pain. Flopticals are hideously slow, and not
worth consideration for most anything, IMHO. Syquests are great. There is a
270mb Syquest mech available that can read/write the 44mb and 88mb cartridges.

> 650 mB optical drives
> 650 mB WORM disks

These are promising, but a bit pricy. Pinnacle systems make some nice ones.

> Harddrives - 2.5gB or more

> BTW - I'll run it from a Falcon030.

You might want to consider a big IDE drive, as they are usually significantly
cheaper than SCSI. On the other hand, you can always use a SCSI device (I
have a bias against IDE, I guess). Anyway, a big hard drive is probably your
best bet. The bigger you get, the cheaper per mb. I have a bid for 9gb
external SCSI's with enclosure for about $3500. Amazing! Most big SCSIs
have a 1 year 24 hour replacement warantee, and a 5 year general warantee
(you can extend the 24 hour replacement warantee for about $20 a year, well
worth it). You might consider getting two 1gb disks, as opposed to one
2gb or above, so you have some redundancy.

Insignia's SoftPC is already available for the Atari ! I tested a version a
few months ago. On a 32 MHz TT it reaches..... about XT speed...
I was not impressed... You had to setup a pseudo harddisk for SoftPC which
constantly gobbled up the amount of space you had set aside for it.
Atari partitions access was very clumsy supported. I even had to put in a
NeXT (!) driver file to even get a look at the Atari dir's. Couldn't manage
to get any files from there. Only way to get files on this pseudo harddisk
was by copying them to disk and then SoftPC could read this disk back
in... HD format floppies were not supported. Display emulation was CGA and
the whole SoftPC ran inside a window (which was nice) but you needed at
least a vertical resolution of >200 lines (TT medium).
The PC emulation was quite stable though, it hardly ever crashed. Even when
running DBASE 4 and DOS 5.0!!

So, I don't expect anything of a Software PC emulator for the 16 MHz
Falcon. The emulators which were announced were meant to be hardware. This
could be done quite easily by putting in a 486 SX processor.

>
>So, is my monitor capable?????

Well, no it is not...

Your monitor is capable of all the VGA modes of the Falcon but not the RGB
(15 kHz horizontal) so you can't run the overscan modes etc.

I have tested my old trusty Eizo (=Nanao) Flexscan 8060S and that one works
OK for all resolutions (it can handle 15-40 kHz). I think the older NEC 3D
could also handle 15 kHz.

My biggest grumble at the moment is GFA's insistence on turning the mouse on after every AES call - including calls to turn the mouse off!!! This wreaks havoc, as BEG_UPDATE/mouse-control/etc calls become incorrectly nested, and you get mouse droppings all over the place with multitasking software in place (even desk accessories). Does anyone have a patched version of the compiler library which leaves mouse control for the programmer to sort out?

That means they're bad C programmers. Comments, logical variable and
function names, make it quite easy to understand old code; you can even
(*gasp!*) read other people's code if it's written well!

> The GFA-Compiler produces nice code which is fast enough.

I think GFA-BASIC is hell. It creates code that is likely to break on
any new computer/CPU/OS-version.

Why are you "waiting for a comfortable C++-port" if you dislike C so
much? The same bad techniques can be used in C++...

I have an STE which i ordered from the UK a few years ago. As I live in Norway
I'd want to use the three additional Norwegian/Danish characters to the English alphabet.
I've changed the TOS to v2.06, but i didn't want the Danish or Swedish one, so I opted
for the UK version instead. I have found key-edit programs that are to reside in the auto
folder. That's okay if I want to use the Norwegian character, but what if I want to use
those characters that I lose, because the Norwegian letters are in place of those.
It's the characters: "]", "[", "}", "{", "|", "\".
Is there a similar program (to reside in the auto folder) that I can use, and change
between two different keyboard layouts with some kind of key-sequence?
Like, the "normal", original keyboard layout (the one that corresponds correctly to the
keyboard) and the Norwegian keyboard.
Thanks.

Hallvard, Oslo, Norway

>worth consideration for most anything, IMHO. Syquests are great. There is a
>270mb Syquest mech available that can read/write the 44mb and 88mb cartridges.

The 270 is 3.5inch and cannot read 44/88 carts. There is a 200MB version
which can read 44/88. Floptical is a waste of time IMO. I just got myself
a Syquest 105, the mechanism was less than 300 UKP from System Solutions.
It is very fast 1200 k/s on read. Almost as fast as my Maxtor 210MB
(1400k/s). I _think_ the 270MB one is even faster and can read 105s.

The carts sell for about 60 UKP for the 105, 90UKP for the 270.

>Are they still being made/sold - if so, how much etc.. etc..

After the initial batch(s) of STBooks went to retailers (only in
Europe -- maybe ONLY in the U.K.), Atari pulled it in order to
'fix' it. By 'fix' I mean that they were getting A LOT of
response from people that they wouldn't buy one if it didn't have
a backlit display, among other things. Since Atari was busy
working on the Falcon030 and Jaguar, they didn't have the
resources to revamp the STBook. However, Atari has not officially
killed it -- it's in limbo! It cost something like $2500 too, so
it was far from being a cost-competitive product. There are
several hundred out there, though, and most owners seem to be happy
with them.

> (with and w/o hard drives, etc)

1/0 - $ 799
4/0 - $ 999
4/80 - $1299
14/80 - $1899

Those are the list prices (and all dealers can advertise
them at), but there's generally a 20-25% markup (e.g. a
4/80 costs the dealer about $975), so you could always
haggle.

>
> -What sort of monitor is needed?

You can use either an ST RGB/mono monitor or a VGA monitor
(or a multiscan monitor capable of handling both signals),
but you need to buy the appropriate monitor connector for
the Falcon030's video port.

>
> -What is the DSP used for?

So far, only direct-to-disk digital audio recording/playback,
but 9600-14.4kbps modem emulation is still promised.

>
> -Where does one buy Falcons?

From almost any dealer that carries it. Atari recently
allowed dealers to mail order Falcon030s, so they should
be readily available from places such as Computer STudio,
Toad Computers, and others.

>
> -Does Atari have plans to bring out any new computers?

If they do, they haven't told anyone. However, Sam
Tramiel has said that any computer Atari does (in the near
future) will incorporate Jaguar technology. I'd say
they have some plans, but can't really focus on them

until the Jaguar's rolling on its own.

[> something. I'm using a RAM disk to decompress/install it, and I've redefined the
[> directories. I don't have a hard disk- but is this the problem. Will it only
[> install on a drive D system?

Hi, I am the author of MasterBrowse; the installation program will not
create folders, so make sure that you create the folder you are
attempting to write MasterBrowse to. Also, do not try to install
MasterBrowse in the root directory (this may be the problem). As
long as you meet these two conditions, you should not have any
problems. If you do, you can manually install MasterBrowse using
the following method.

Rename DATA6.INS -> MBROWSE.PRG
Rename DATA7.INS -> MBROWSE.RSC

That will give you the "raw" program. If you want the client-program,
then you really should use the installation program. To answer your
question, though, MasterBrowse can be installed on any drive. I've
never tried it with a ramdisk, but this should not be a problem.

I have a friend who uses Cubase for mastering som Roland equipment, such as Roland S10, Roland R70.

His version of Cubase is from 1989 and the problem is that when you are tring to send system exclusive messages to these machines they demand a checksum that is not supported in Cubase (asfar as I know anyway).

The only synthezizers that is mentioned in the help file is Roland d10-d50

Does anyone have a solution to how to send System exclusive messages to the machines mentioned above,

We've tried this hexline but it doesn't work

Roland S10 F041...xxF7 and then there is supposed to be a checksum ????

Using newnames active, this is caught by an alert when you move off the row with this kind of typo. Not a serious problem. More serious are some syntax details which are "corrected" automatically when running interpreter, but which can cause bombs when compiled since compiler does not do checks.

>dog-slow 16MHz 68030 in the Falcon?

Softpc with windows is emulating a bus hindered, interrupt crazy computer architecture on a computer architecture insistent that all I/O go through the cpu. I think (yes, this is conjecture not fact) that the Falcon would have one leg up right there not having the I/O bottleneck. Would that help be sufficient to make up for the 16MHz clock - I have no idea but I would be a bit surprised if it could add a relative 9MHz to the clock.

I've had my first real experiences with Windows 3.1 on pcs and on suns, SoftPC and WABI on a color SUN LXI-10 (if I remember the number right). I couldn't wait to get home to my Falcon after this week, I'll tell you. I am not sure if its the DOS hw architecture, the Windows sw architecture, the emulations - but I was generally unimpressed except with the pcs text updates of the screen. On the SUNs, the constant churning of the disks on each keystroke was unnerving at best.

I am more and more preferring our Atari software to the pc products. Lots of glitz but intuition seems to have gone out the window somewhere along the way. The last is all very personal opinion. :^)

no no no! The DSP has _nothing_ to do with direct to disk recording! You could open your Falcon remove the DSP chip and still record 16-bit 50kHz sound to your hard disk (assuming you hadn't killed something in the process...).

The DSP can be used for adding sound effects to digital audio, mixing several tracks togethor, decompressing JPEG files etc...

N>
N> Has anybody any details about two-peice cases for the Falcon??
N>
N> I know about the System Solutions Tower case....
N>
N> Any others??

I've just bought "The DeskTopper" from Lighthouse, Germany.
It's a cheap metal top to fit on the original Falcon030/520/1040 bottom plate.

All you have to do is to take off the top, replace it with the new one, build the keyboard into a a separate house and start up your system - It's done in less then half an hour!

It's not the prettiest box I've ever seen, but it's solid, have plenty of room for 2 extra drives, an extra power supply etc...

Price: Desktopper - 169.-DM
Free keys, Keyboard house - 89.-DM

... and it might be a good idea to buy the Power Up (with enables yo to move the powerswitch and reset button to the front of the box + contains parts for switching the monitor on/off from the Desktopper, and finally some parts to simplify extra harddrive installation. Price: 49.-DM
There is also an AT-kit available - to make it possible to connect an AT disk to a Falcon (price 79.-DM) and a Floppy Kit (price 49.-DM) which makes it possible to move the original floppy drive (or a second one) to the front of the box.

For even more info you should contact:
Lighthouse, A+G Sexton GMBH
Riedstrasse 2, 74076 Heilbronn, Germany
Tel: (+49) 7131 95720
Fax: (+49) 7131 957234

BTW - the guy running the company speaks exellent english!

Actually, you can improve on that a little by using obtaining the "screen"
program for Linux, and installing it on the Linux system; then your Atari
VT100 terminal emulator becomes up to 10 "virtual" screens, each running
it's own shell, with it's own I/O, etc. You can't run X11 clients, but
you do have multiple independent windows into a multitasking system.

>I recall in another message in this newsgroup mention that the 80286 emulator
>for PPC compiles code in 'chunks' and runs it in PPC native mode, which can
>speed up loops dramatically, etc. Is that really true? Do you do that with
>GEMulator? Would it help with that and the 486 emulator for the Falcon?

I think its worth noting here a few points:

The PPC runs at anything between 60 and 80Mhz ATM. This produces 286
emulation at the speed of a 486SX25 apparently. It can also emulate a 68040
at approximately TT speed.

A Falcon OTOH is only a 16Mhz 68030. IMHO it will never be able to emulate
a 486 at anything like a decent speed.

Therefore it would seem more useful to develope a *hardware* 486 board for
the Falcon (maybe based on some clocked enchanced non INTEL clone) instead
of trying to do it all in software.

Disclaimer: All speeds etc are based on what I have read on the PPC. I have
not had to a chance to verify real performance myself.

Roland.

In comp.sys.atari.st you write:

>==
>iYes, but you need the TEC board and that takes time to install. I will
>go for 2.06 if it ends up being the same price however.
>==

>You could getthe TAB board. It's only about $25 and does the same thing.
>I forget how the installation is, but it remaps a whole MB so you can
>install up to 1MB of ROM. It is sold by Newell Industries, but I don't
>know if he is still in business.

Never heard of the TAB board. Can you tell us more about it? Also what
is the address and phone number for Newell?

Whew! It took me a while to find it. The last address I have for
Newell is:

Newell Industries
P.O. Box 253
Wylie, TX 75098
USA

US phone: 214-442-2584

Hw makes mostly 8 bit stuff but I think he has memory expansion boards
for the ST as well as TAB.

> but 9600-14.4kbps modem emulation is still promised.

The DSP IS NOT used for hard disk recording! If it was then you would not
be able to add any effects to your recordings. Why would you need the DSP
to do d2d recording? The DSP is a signal processor.

I have the following system:

Mega 4 St w/ TOS 1.2
SH205
SC1224
ICD's "The Link"
Quantum 120 SCSI Hard Drive
Apple Cd300 CD-ROM Drive

The problem I am having is this:

I can not get the damned thing to recognize the Quantum OR the Cd-ROM let alone try and format them. I have tried connecting just each of them. Connecting The Link WITHOUT the SH205 connected. With it connected. EWith the Atari HD Boot installed, with the ICD Boot.SYS installed. Al no go
PLEASE HELP!
mbates@holonet.net

Also, is there any other driver for CD-ROMS which will work with what I have that I can download or something?

-Marlin

This copy of Freddie 1.2 is being evaluated.

Yes, I know. I just meant that those packages are the main
commercial packages using the DSP now.

Jeez! I leave a little tidbit of info out and everyone lynches
me! <grin> As I said, I just meant that the digital audio
packages are the only real applications using the DSP at this
time (commercially). Also, the DSP _IS_ used for the actual
recording/playback when doing some multi-track stuff (e.g.
Cubase Audio Falcon 16!).

From: shall@oregon.uoregon.edu
Message-ID: <2qicue$tb@pith.uoregon.edu>
Source record: 187685

Just got a BJC600 for use with my ST. I mostly use Pagestream 2.21. The printer comes with lots of windows software, including TrueType fonts, but no driver
for Pagestream. Pagestream has LQ2550 drivers, which Canon lists as a possible alternative, but I'd like to use something made for the printer I bought. Where can I find the right driver? The LQ driver actually does pretty well, but it seems to feed multiple pages a little too far, ending up starting the 2nd page an inch further down than it should. I know the HP Deskjet has lots of support, but what about the BJC?
Any info would be greatly appreciated.

Hi!

The interesting ftp-site ftp.tu-clausthal.de (139.174.2.10) is routed via
a 64kbit link, too :-(
To get files from such sites it may be better to use FSP (instead of FTP)
or to send your requests via Email. You may connect to our site via
FTP, FSP (port 21) or Email ("mail-server@ftp.tu-clausthal.de").
I've never heard about lost email (but there is still one problem with
the mail-server: if you are using a mail-gateway which adds extra information
to the *body* (but in front of the real message) this may confuse the
parser. In this case you will get an error-message via email indicating
the problem).

BTW: FSP-clients are available from ftp.tu-clausthal.de
/pub/unix/network/apps/ftp/* There you will find the FSP-commands
(fsp.271.tar.Z), a command-line-interpreter (like FTP) (fspcli.tar.Z)
and a Xview-Client (fsptool-1.6.1.tar.Z).

Bye,
Wolfgang.

That's funny Joe, it really is. Dingy newsgroup? Lat time I checked
the Atari Computers Corperation was still in business, and their stock was
a bit higher then 87 cents a share.
You are welcome to bash all you like, but you are deluding yourself,
as are all the people in the Ami group who swear that the end of Amiga is no-
where in sight. COMMADORE IS BANKRUPT AND IN LIQUIDATION! Know what that
means? They're gone. Maybe the Ami chipset will be bought by a strong co.
like HP, but it has to be a co. with a LOT of money.
Get real. Ami is dead.

2452. Re: Atari & Commodore

Source record: 187688

[Worthless babble clipped]

Joe, what's the matter with you? Where do you get yer info? Atari
is kicking because of Time/Wrner? Wha?? Time/waner made a killing in
the market because they purchased nearly 25% of all available stock, but
didn't sell it off when it hit 12. Why? They see the value in the company.
But being a stockholder isn't the reason Atari is doing well.
Tramiel saved Atari when Warner dumped it in late '84. 10 years
later, warner is kicking themselves. Sure, Jack Tramiel is kinda a bone-
head, and Atari could have done much better, but if they did as well as, say,
Commadore, they'd be in LIQUIDATION! Know what that means? NO MORE COMMIE
ANYTHING! NADA! IXNAY! ZIPPO! KAPUT! Commie is dead. Atari is not.
In three years, people will be saying "What's an Amiga?"
I liked the Ami. I didn't like Commadore. The Ami was (notice past
tense) a good machine. I thought the ST line was better. I know that the ST
computers are not the reason for the long awaited pulse of Atari (The Jag
is), but at least Atari has a pulse! Come to terms with it, my man. You're
in denial. Hug your Ami one last time, and go but a Falcon.

Do you own an Atari ST/TT/Falcon030? Are you also an Ohio State
Student who wants to join the Homenet switchover, but don't know how? Do
you want to learn about client/server software for the Motorola based
Atari machines?

Then visit the Atari Computer Enthusiasts of Columbus this Wednesday,
May 11, at 7:30pm at

Chemical Abstracts
2540 Olentangy River Rd.
1/4 mile North of Lane Avenue
Across from the Woody Hayes practice facility
Next to the Fawcett Center for Tomorrow

We will have a speaker discussing his company's service and Internet.
The meeting will also include an overview of client/server software
available for the Atari 680x0 line of computers.

If Atari is your primary platform and you don't wish to be left in
the dust by the movement to client/server networks, be sure to be there
Wednesday!

> which can read 44/88.

I just fondled one (it may have been a 280mb) at InterOp two days ago. I
was assured that it could read and write 44mb and 88mb cartridges (it is a
5.25" device). I believe it replaces the one you are talking about, and
can format the previously 200mb carts to ~280mb.

I also saw a prototype ~500mb 5.25" cartridge device. It is supposed to
support all older cartridges (read and write).

With that said, I should mention that I was talking to a sales droid
reseller, not a techie. However, the markings on the cartridge boxes seemed
to back him up. Essentially, Syquest is getting ready to release a bunch of
new models.

> I just got myself
> a Syquest 105, the mechanism was less than 300 UKP from System Solutions.
> It is very fast 1200 k/s on read. Almost as fast as my Maxtor 210MB
> (1400k/s). I _think_ the 270MB one is even faster and can read 105s.

These are cool. One thing I like about the 3.5" devices is their shorter
spinup time. It seems that all the 5.25's take about twice as long to get
up to speed.

In article <2q5ut5$499@urmel.informatik.rwth-aachen.de> stephan@abmx.rz.rwth-aachen.de writes:

>Is it possible using my fantastic ATARI 1040 ST as an (X) Terminal connected
>to a Linux machine?
>

If You have some budget to spent, You could try the following:

1. Find the german company X/Soft (the owners name is Michael Gehret)
and get information on their X/server for ATARI ST/TT.

2. Find an ethernet interface for Your ST that works with the ACSI port.
X/Soft can help You, maybe.

3. Find a tcp/ip package that works properly. Once upon a time, ATARI
sold something that was nearly working. I use it sometimes, and it
seems to be stable. But there is no more support for it.

At the Technical University at Vienna (A) they have a ftp server that
holds a tcp/ip package that is useable, but far from stable and also
not supported. But: You can get the sources in C and maybe... (:-)

There are some slip packages also, but I dont know any of them.

4. Back to the budget: You will need about DM 1800-2000 to be ready
for "X on ST/TT with ethernet". Not counting the time You
will need to get it running.

IMHO, it isnt worth to spent the money and the time on the subject
"X on ST/TT" before ATARI or any other party comes up with a stable
and long time supported tcp/ip package that runs also with MTOS (or MiNT),
uses effordable ethernet hardware and is well documented.

*** Did You hear me out there? Its a challenge! ***

So long, have fun with VT52, VT100, iscreen, tcsh and all the usefull
(though not GUI-like) old time surfaces. They are fast, cheap and
well documented.

Greetings, Stefan Brunthaler

Never heard of a program like that ,but shouldn't be very difficult
to program. Anyway if someone earsed the program from the AUTO folder
then all folders would be 'open' again! Dead easy to crack!!

Why not use a program to 'hide' imortant files?

Joe Lau (joelau@panix.com) wrote:

: >I see the little 'dd' under the PE column by the stock price, informing
: >us that the company has posted a loss for the four most recent quarters.

: >Is there any reason to think that atari might be heading in Commodore's
: >direction? If not, why not?

: correct. Atari had losses for their last few quarters. However, this
: was not a surprise to financial analysts. Atari has practically dropped
: their computer line (unoffically) and is now favoring the Jaguar system.
: By doing this, they had to overhaul their operations. Since last year it
: was well know that Atari won't be in the black until 4th quarter of 94 at
: the earliest.
: I do not think they will follow Commodore because there is more interest
: and hype for Atari. Commodore's attempt at the interactive CD industry
: failed. commodore really did not have the resource or any serious backing
: to their product. At the very least ATari has Time Warner.
: With ATari and Sigma Reel's latest annoucement, I think ATari's profit
: potential can be fairly large.

I wouldn't count "Commodore's attempt at the interactive CD industry" as a failure just yet. I know its only rumors but checking out the comp.sys.amiga.* groups you will see that many people have been in contact with various Commodore people and it appears that the voluntary liquidation of various Commodore assets is primarily being done for the purposes of reducing the company debt and allow a new "Asian Investor" to buy it out (See article below). Its expected that an announcement will be made on this issue in the next week or so. The rumor mill appears to be pointing to Samsung as the buyer. According to my local Commodore shop, everything is still running as usual including the sale of CD32 units. He said that parts are a little hard to get but he said that was nothing unusual. With Commodore's always poor marketing in the US, marketing might improve after all this reorganization is finished (it couldn't be any worse). It also appears that CD32 sales in England is better than they ever (contrary to the Commodore Liquidation press release).

Given Commodore's past track record (which was bad), this reorganization might eventually help improve CD32 sales.

Just my two cents,
Paul Palumbo

Commodore news

05.05.94 14H00 CET

I talked with Karola Bode, head of Marketing and Public Relations at Commodore Germany.

Sorry, no name for the buyer at the moment. Alwin Stumpf and some top managers at Commodore know it but they won't tell even to the employees. There are a few hints for us though :

The investor is getting the rights on C= trademarks, technology, know-how and products. As said before, it is a big, big asian (japanese or korean) company, one of the biggest (take the top ten list worldwide and it'll be part of it). It is a global trust that does not yet have a strong representation/reputation in the consumer market and therefore is interested in Commodore and the Amiga.
All the liquidations happened because the investor didn't want to take over non profitable subsidiaries.

A few names come to mind :

Acer, Mitsubishi, Matsushita, Daewoo, Hyundai etc...

Unlikely :

NEC, Sony.

The Phillipines plant is currently halted. It might be used again if the investor decides to buy it up with the lot. Otherwise, they have enough power to use their own manufacturing structure to produce Amigas and to sell them worldwide. This means that countries that didn't have a Commodore subsidiary before could now be taken care of.

At last, Commodore will have enough ressources to make agressive marketing, fast development and efficient worldwide distribution. In two weeks, things will go full speed ahead, like never before, she said. "We won't just sit there now for the next six months and wait to see what will happen, it will be a big succes".

Again : The full range of Amiga products will be maintained. Get also ready for a massive re-launch of the CD32/FMV.

I have the following Atari ST software for sale:

Inventory Master by Royal Software $15 obo
Complete inventory program. Will do purchase orders as well as generating
all sorts of daily, weekly, and any other period reports. Disk and manual.

Thunder! by Batteries Included $10 obo
Spell checking program. Disk and manual.

EZ Track + by Hybrid Arts $20 obo
Complete 20 track MIDI sequencing program. Excellent for small MIDI
setups, has a great deal of versatility. I used this for 5 years before
upgrading.
Disk and complete manual.

Buyer pays shipping. Email me with any inquiries, offers, etc.

I really hate posting mac information here -- but have to correct an
error. The AV card only adds the "V" options (digitizing video, and
adds VRAM to the 6100). *ALL* PowerMacs have 16bit Audio In/Out.

You don't have to buy the AV option to get it. (And the AV option
does not have a DSP in it like the AV 040 macs do.)

It sounds like either one of two things:

1) You've got a virus.
2) The mouse port may be flaky

It might also be the wiring in the mouse might be a little screwy. It doesn't sound like the mouse itself, though, unless one of the rollers is getting stuck somehow. But that wouldn't explain why it works when you first use it, and then flakes out ten minutes later.

I'd first scan for any viruses. Then I'd give your mouse cable a good testing... try bending it about while the computer is on to try and force this little quirk to happen. Failing that, it may just be the mouse port itself.

Usually you get a bad reputation if you fail to deliver a package in the alotted time, or fail to carry out a contract, or fail to deliver someone in the alotted time.

The easiest way out of getting a bad reputation is that if you DO screw up and can't restore from a saved backup, simply never go back to the place you got the job from. (Unless it's a case of delivering a person ... then there's no getting around that)

>That's bogus! Something weird is going on!

Yea, I think it's crap as well.

If I had a ten character validation string, let's say XXXXXXXXXX, and I
did a strcpy, sprintf, or whatever, only 'X' would be returned for the
string. If I had XXXXXXXXXN, then 'XXXXXXXXXN' would be returned. If
there was XXXXXXXNNN, then 'XXXXXXXN' would show up.

Neat 'feature' ?!?

Hi,

Since it doesn't use the DSP, will/might it run on a TT? I have a
NOVA16M graphics card so if you require 16bit color, I can do that, but it has
to use the VDI. BTW, does your program use a math co-pro. if present? As I
have never coded an MPEG player (who has :) - would a math co-pro help at all
with the calculations needed for an MPEG player?

If it doesn't run on anything but a Falcon, any chance you can make
one for us TT-owners? I bet the guys who bought Medusas(Pandoras) would love
one too.

Hi Ralf,

I do the CoNnect registrations here in North-America. If you look in
the help/registrations/USA section, you can get my address and just about
anything else you need. If you have any specific questions, go ahead and ask,
and I'll do my best to answer them (before someone else jumps in and answers
them for me :) .

This is nonsense. If you don't want Xwindows, you can run Linux with 4 MB.
Also, Linux is running quite smoothly on fast 386 machines.

On the other hand, Linux will not be available for the ST because the
processor has no MMU. There will be a version for the TT, and maybe
one for the Falcon (just speculating here).

: (*gasp!*) read other people's code if it's written well!

Yes, this is right, but the intention of the first post here was:
Ouh... GFA-Basic always produces Spaghetti-code... it's slow... it's not
structured... etc.
You can believe me: I don't know any GFA-programmer which is using GOTOs
in his programs (but heh... are you using break and continue in C? ;-).
You can do very structured programs with GFA-Basic and the compiled code
is fast enough. Yoy can only get problems if you are programming in a team -
GFA does not support modularity very well...

: I think GFA-BASIC is hell. It creates code that is likely to break on
: any new computer/CPU/OS-version.

Sorry, I have written 3 games now in GFA (the first one 6 years ago) and
they all run on my Falcon as well (without any changes).

: Why are you "waiting for a comfortable C++-port" if you dislike C so
: much? The same bad techniques can be used in C++...

I don't dislike C, I just told you, that C also has some disadvantages
like any other programming language (I have bought a C-compiler for about
$200 so I HAVE to like it ;-).

Yeah, I agree with Ofir. C= may have given us alot of ameoba owners, but the more choice people have, the less chance they will go PC. It's does however push the Jaguar boat out a bit more which can only be good :)

BTW, the more newsgroups you have the harder it becomes to know where to post/find things IMHO. Three is fine, although c.s.a.programmers would have been good IMHO too! :)

The mouse of my 1040STfm died about a year ago. Turned out that the solderings where the port is connected to the PCB had went to h-l. Seems that Atari has tried to save a few bucks by not making proper solderings.

I suggest that you should open your ST and check the solderings for cracks, if the virus check turns out to be negative. If there are cracks, just grab a soldering iron and resolder all pins from the two joy/mouse ports, and the mouse should live for a few more years.

PS. Have you checked if there's dirt in the mouse? DS.

David.

The SCREEN program is a nice little setup (the sources should
compile nicely on any unix setup, with a few tweaks of course :-)
For those not familiar with it, SCREEN kinda lets you do what
"Unix Windows, aka UW) did, but without the multiple windows onscreen
(you have to toggle between the windows). But like abovementioned,
it'll work with any VT100 emulator quite nicely...

Now what'd I do with those sources? :-)

I've ported the Berkeley MPEG source to the Falcon as well, but mine is not as
fast:-(.

I think I'm correct in saying that floating-point isn't actually used in
the majority of the code, if at all - I'm not exactly an expert on MPEG
decoding, I just hacked the X-windows code :-) . I write directly to screen
memory in 16-bit mode, and it looks like the other port does as well (no
GEM in sight anyway).

Cheers,

<GRIN mode ON>

But Chris, "C" is supposed to be cryptic and indecipherable - that's
the appeal to many folks. I have yet to see another language capable
to produce an ASCII maze with *1* line of code (that line stretching
about 20-40 lines on screen). Obfuscation (sp?) is the key...

<GRIN mode OFF>

Seriously, "C" gives you the power to do a lot of great things,
and the constructs, et al to keep it organized and commented well.
But it also gives you the ability to ignore all that and just
"hack away." All depends on the programmer (like you said)...

>Does there exist a patch for TOS which makes it act upon VT100 instead of
>VT52 escape sequences?

There was just some sort of patch (uploaded to GEnie, and I think atari.archive.umich.edu) that would allow TOS to handle ANSI codes, and ANSI's escape sequences for the most part are compatible with VT100's (at least the important items such as Clearscreen, cursor control, etc). Graphics characters are not the same between ANSI and VT100 however...

You might scan atari.archive for a file beginning with "ansi" (not Ansiterm).

Hope this helps...

Who is "they" ... ?
The rumour is - of course - wrong, but not completely. Linux is being portet for ATARI Computers with 68030 (and up) processors. This is essential because you have to have a MMU that is capable of paging and memory protection. So Linux will be available for the Falcon and for the TT in the (not so far) future.

cheers!
Michael

The Maus-Net version is now being integrated into the official
Linux/Atari development. If you can set up a cross-compiler, you can
get the current patches from Robert de Vries <robert@and.nl> for a
working kernel for the TT.

Things to bear in mind : there is bugger-all room inside a falcon.
: 2M SIMMs are mac-specifi atrocities which don't
bear thinking about.

>(I repeat: Why not use 8 1Mb SIMM:s and have logic deside which "bank" to use
>depending on the address)

As above : space. Also cost - the 'extra logic' needs hardware to live in,
time to be developed in, and board space to rest on. All of that costs
money.

Also, equally obviously, you don't know much about DRAM circuit design 8)

If the Falcon is designed for 4Mbit devices, there's not much chance of
cramming more 1Mbit devices in - read my lips : "refresh"

(apologies for the brusqueness, I'm busy compiling on another vconsole
- gad but MiNT is a nice toy 8)

Linux Atari currently only runs on a TT, it will never run on an ST at all as it requires a PMMU - only in 68030 onwards CPU's. It may run on a Falcon one day.

I could waffle on, but why? There was an Atari Linux FAQ posted last week.

-> Have you any more info about this ??
-> Pressrelease ??

Here's the press release that I got:

From the Orlando Sentinel, Saturday, April 30, page C1:

Commodore International Ltd., a pioneer in the personal computer
industry, said late Friday it is going out of business. The
company, based in West Chester, Pa., plans to transfer its assets to
unidentified trustees "for the benefit of its creditors" and has
placed its major subsidary, Commondore Electronics Ltd., into
voluntary liquidation. The company last month reported an $8.2 million
loss for the quarter ending Dec. 31 on sales of $70.1 million. A year
earlier, Commodore lost $77.2 million on sales of $237.7 million in
the same period. In the latest report, Commodore said financial
limits had thwarted its ability to supply products, leading to
weakened sales.

From what I have read in the latest GEnie Lamp, Atari is out of computers
as well....

: Hmmmm, I am thinking of buying a Falcon this weekend, but since I don't
: have any money for a model with HD and monitor, will Mjuzakk work in
: monochrome?
Sorry, it won't work on monochrome. It runs on RGB/TV with a little helpful
auto folder program called mltiblow.prg -- available on ftp.tu-clausthal.de
/pub/atari/falcon/systools/
It sets the Falcon to 640x480 (interlaced) mode on RGB/TV. But I really
recommend a VGA monitor for longer work with Mjuzakk.

bye,
Chris

12" WORM optical disks can hold 5.6G of data, and the drives are SCSI.
Access time isn't too bad either. I think drivers are only available
for UNIX though.

There are probably 5.25" optical jukeboxes that will let you have ~5
disks "online" at the same time; 5 x .65G = 3.25G, so that would hold
your collection, too.

2506. UPDATES of my uploaded games.

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 12:20:12 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <768486012.8396@minster.york.ac.uk>
Source record: 187313

I have uploaded updated versions of my following games:

pacmen.zip (PACMEN)
3d_ski.zip (3D_SKI)
alienation.zip (ALIENATION)
linecras.zip (LINE CRASH)
mazewar.zip (MAZEWAR ST)
video_g1.zip (VIDEO GAMES I v.0.5)

If you have a version of any of these games dated from before 04-04-1994,
then get rid of the old version and download the latest version as this works
on more versions of TOS.
These games should work on all TOSses. If they don't, I will eat my foot!!!

I have uploaded my games to the following FTP sites: (BEWARE OF VERSIONS DATED
BEFORE 04.04.1994)

atari.archive.umich.edu
ftp.germany.eu.net
nic.funet.fi
ftp.tu-clausthal.de
cnam.cnam.fr
ftp.cs.ruu.nl
ftp.uni-kl.de

Note: Some sites may take a while to recieve these games.
/pub/Atari/Games

PACMEN (pacmen.zip)
This is a version of Pacman that can be played by up to eight players
using the Paralell Joystick interface and the STE's Joystick ports to
add the extra joysticks. You can play it with less than 8 players,
and the remaining players are either computer controled, or turned off.
The other addition to pacman is that each player has a missile, and
infinate lives. The game ends when all the dots are eaten.

3D SKI (3d_ski.zip)
Guide an egotistic robot down a ski-slope and avoid falling off
and coliding with rocks. Includes sourcecode in STOS basic.

ALIENATION (alienate.zip)
Platforms and ladders game similar to Mr. Robot on the 8 bit computers.
Navigate your robot around the obstacles and grab all the pills within
a time limit. You can also design your own levels with the built in
construction kit. Includes sourcecode in STOS basic.

LINE CRASH (linecras.zip)
This is a game that uses the extra joystick ports on the STE and the
printer port joystick adaptor to allow up to 8 joysticks to be added
(although less than eight people can play). On ST computers without
the two extra joystickports on the side, up to four people can play.
The idea is to trap your opponents in the style of TRON lightcycles (ie, you
leave a line behind your vehicle), and avoid being trapped yourself.
Included in the LZH archive are docs for building your own joystickadaptors.
Written using STOS basic.

MAZEWAR ST (mazewar.zip)
This is another game for 0 to 8 players. The idea of this game is simple.
Shoot your opponents while avoiding being shot yourself. Eight tanks (some can
be computer controlled) negotiate a maze. Some walls are indestructable, and
some can be shot.
Included in the LZH archive are docs for building your own joystickadaptors.
Written using STOS basic.

VIDEO GAMES I v 0.5 (video_g1.zip)
Play three games at once on the same ST with the same joystick.
Yes, it is possible. You can simultaneously play Pacman, space invaders, and
pong, using combinations of movements of one joystick. Each game is overlayed
transparently on top of the other games.
Written using STOS basic.

I have written all of these programs myself, and they are
Freeware/shareware/public domain.

Please mail me any comments, etc.

> it? ... ALT-F4 or something???

IBM's CUA (Common User Access) documentation says Alt-F4 means "close
window" and Alt-F3 means "exit application". Under both OS/2 and
Windows, these are true (though most Windows apps don't do Alt-F3).

> At any rate, I agree with the original thread that Atari software could surely
> benefit from making use of a publicized (and enforced) hot-key standard.

Definitely. I think it's too late to have much of an impact though...
there's too much non-conforming software out there that is never going
to be updated. For new software, the guidelines should be followed.

Linux (or any form of UNIX) would never work on the ST, the CPU lacks
the hardware required for memory protection.

Some people are working on a version of Linux for the TT though; the
68030 has the memory protection hardware.

This is what I love about USENET; people post without knowing.

The PowerPC-based Macs are many times faster than a 680x0 Mac, even when emulating a 68k for some program they are faster than a 680x0 Mac. In emulation, not by much, but that's the price you pay for emulation... LOADS of Mac software is being rebuilt as PowerPC binaries (or combo PPC/68k binaries which have both the PPC and 68k code in them), even shareware stuff appeared as PPC binaries the day the PowerPC Macs were released.

> And the IBM product will currently only run AIX, requiring that you fork() out

Later this year IBM Power Personal Systems will be releasing PPC-601 based machines set to compete against the '486 market. You can bet these things will be cheap.

> The only faintly consumer-oriented product in the P601 family right now is the
> Power-Mac. And running Soft-Windows on it to emulate a Mac emulating a Windoze
> environment just doesn't strike me as being very sensible or efficient. No
> more than one level of emulation at a time for me.

SoftPC/SoftWindows on the PowerMac is native PPC-601 software.

I really, really wonder why everyone is getting so hung up on this? I mean, really, WHY would you want to use (for example) the Windows version of MS Word in emulation when you could use a native PPC version for the Mac? Why worry about emulation anyway? It's for running things you _need_ to run until native versions are available. If you don't need to run it in emulation, don't.

This sounds like a much better way of moving to a _completely_ new
hardware architecture than to just say, "Well, tough, you can't run any
software 'til it's all native. Sorry." Complete compatibility with the
past is what's crippling PCs.

2510. miscellaneous stuff for sale

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 12:33:04 UTC
From: klassa@aur.alcatel.com
Message-ID: <2qlai0$7og@aurns1.aur.alcatel.com>
Source record: 187314

I was cleaning out my computer desk & ran across these items:

*** I have an SF-314 drive (DSDD -- 720K) that no longer works... It comes complete with power supply & cable. I don't know why it doesn't work -- I woke up one morning to the sound of the drive motor spinning (nonstop). It could be the PS, it could be something else. For sale as-is...

*** I have a set of TOS chips that came out of my 1040 when I upgraded to TOS 1.4. I don't know what TOS version they are -- I bought my 1040 somewhere around 1987, so draw your own conclusions. It's a six chip set. They worked when I yanked 'em, but I haven't used 'em in years.

*** I have an ADC (DAK) 1200 baud ("Smart Duck") modem for sale. It comes without a cable (I'm using the cable on the 2400 baud modem that replaced it years ago). It worked when I last used it, but I haven't used it in years.

i.e. everything is for sale as-is -- if it doesn't work when it arrives, it ain't my fault. Items (b) and (c) (TOS & modem) did work when I last used 'em.

Make me an offer... Make it good enough to cover shipping with enough left over to (a) make me feel like it was worth the drive to the post office, and (b) buy a six-pack :-). I mostly want to see this stuff go, because I'm tired of having it around. Terms are: I receive check & it clears, I send stuff. I've got no reason to rip you off -- the whole point is to get rid of this stuff! :-)

Contact me via email at klassa@aur.alcatel.com...

Thanks-
John

>My problem is that when I buy the ship, there are not enough people who want to be
>a crewmember. I've tried nearly all places in the Sol system, Barnard Star and Ross 154.

>Does anybody have the solution ?? Please let me know.

1) As others have said, use the time acceleration feature.

2) The number of people who want to work with you depends on your rank
(possibly also reputation). Meaning that if you start from scratch and
use the ship selling "feature" to get money, you still have a low rank
and would have to wait forever for enough crewmembers to show up.

2513. Re: Keyedit program needed

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 13:27:33 UTC
From: alpldbia@w351zrz.zrz.tu-berlin.de
Message-ID: <2qldo6$kb9@brachio.zrz.TU-Berlin.DE>
Source record: 187322

>Is there a similar program (to reside in the auto folder) that I can use, and
>change between two different keyboard layouts with some kind of key-sequence?

Yes, there is a _very_ good one. It provides full access to all ASCII characters from the keyboard.

Its current name is CKBD Deluxe 1.3, written by Pascal Fellerich, Luxembourg. Former versions were named COMPOSE. I haven't got his email address but the 'normal' one:

Pascal Fellerich
45, rue des Genets
L-3482 Dudelange
Luxembourg, Europe.

I do not know whether it's on ftp somewhere - you may look for compose.zip, compose.tos, ckbd_13.tos or similar (ckbd*.*).

CKBD is a TSR (terminate and stay resident) program for the auto folder. It runs on any TOS computer. It provides several ways to get any character directly from your keyboard:
- Compose Characters (like on VAX stations)
example: press the ALT-Key shortly and after that the characters to be composed.
" and a will make German a umlaut.
- Dead Key (known from DOS and Macintosh)
example: press ' and then e and you get e with accent aigu.
- ...and others

Except the above, CKBD can remap your keyboard. You can use a French AZERTY keyboard as if it were an English QWERTY one. All compose tables and keyboard maps are definable freely. Unfortunately, you have to know how to program in assembly in order to create your own tables and maps but the included standard files fit almost all requirements.

Finally, even an excellent mouse acceleraror is included. Fully configurable, it takes notice of your screen size and changes mouse speed respectively.

German, French and English docs included.

2514. Re: GEMulator

Newsgroup: comp.sys.atari.st

>That is incorrect. I think you are too cynical. GEMulator was reviewed by
>an independent freelance journalist. ImageCopy does not lag behind GEMView
>and is only 2 pounds more expensive (you get a printed manual). ImageCopy
>is much better than GEMview at printing and is first and foremost a
>snapshot utility. I know many people who use both for different tasks.
I accept your point about ImageCopy's usefulness as a snapshot utility.

I would query your statement that ImageCopy is only £2 more expensive,
as GemView screenshots from articles in ST Review et al tend to show an
unregistered version :-)

I am also not convinced of the independence of ST Applications. Yes, the
contributors are independent, but the editor still (of course) selects which
contributions he prints, and is more likely to select a favourable than
damning one, surely? I do still buy ST Applications, though, because it is
the only mag that gives any real attention to programmers.

Incidentally, ST Review's review of the GEMulator was particularly poor. It
went something like 'my PC blew up, so it must be GEMulator's fault, so
it must be crap'. Not really up to the standard I normally expect from the
good-and-getting-better (and independent) ST Review.

>have to have a MMU that is capable of paging and memory protection. So Linux will
>be available for the Falcon and for the TT in the (not so far) future.

...and some more info:

I have seen Linux running on a 4 MB F030 at the fez-a-bit atari fair here in Berlin yesterday. One of the nice people who do the porting (Bjoern Brauel) explained some facts. Here's what I remember (I'm not a programmer - please, forgive me if anything is wrong).

Linux for Atari is based on the Commodore Amiga version. The source code is the same for both versions except the 'bootstrap' program. That means both linux versions are binary compatible so that _all_ programs can be exchanged between the Atari and Amiga version without recompiling them (even a possible Macintosh version will be binary compatible).

Both, the Atari and Amiga developers cooperate since a lot of tricky problems have not been solved yet. As far as I understood there are 8 people working on the project (on the Atari side).

The version I have seen didn't have a disk or hd driver yet, only a ramdisk with the minix filesystem was installed. Some of the basic utilities could be run such as ls, cd, mkdir, rmdir (Bjoern couldn't bring his own F030 to the fair so he had to run the whole system from a 1.44 MB disk).

A lot of work has to be done yet so that they still look for people to help them. Drivers for graphic cards, serial ports, parallel ports and stuff like that still wait for someone to do the job...

Bye, Andre

I doubt if Atari cares either, but just because it came with every ST does not automatically make it public domain, of course.

>I thought version 2 [GFA BASIC] was only avaliable from those PD libraries
>who had permisson from GFA to distriute them ,and that it was not in the
>Public Domian!

That's possibly true. All I know is what John Barger @ GFA-US told me a long time ago... "the GFA 2.0 interpreter is public domain but the 2.0 compiler remains a commercial product." Of course, ever since the interpreter came out on a magazine cover disk it's a fairly moot point, anyway. :)

>Insignia's SoftPC is already available for the Atari ! I tested a version a
>few months ago. On a 32 MHz TT it reaches..... about XT speed...

Yeh, but we were talking about Insignia's 'SoftPC with Windows' or their newer product, 'SoftWindows.' The older 'SoftPC' is a DOS emulator only. And I was under the impression that SoftPC for the Atari had never been commercially released and only a few beta copies had been distributed (perhaps illegally?).

>So, I don't expect anything of a Software PC emulator for the 16 MHz
>Falcon. The emulators which were announced were meant to be hardware. This
>could be done quite easily by putting in a 486 SX processor.

I agree. Hardware-based emulation is the only feasible solution for the Falcon. And that still doesn't address the RAM issue... while Windows will run in 4Mb it is much more comfortable (and faster) in 8Mb or more.

So what is the status of all these DOS/Windows emulators that were so hyped up when the Falcon was first released. Is Compo's available yet? How much?

Hi all,
Can someone out there who has the game "Legends of Valour" tell me if
it is hard disk installable - and if not whether it is OK to run from floppy.
Also any other comments about it (I've got a playable demo).

Guess the Doom bug has bitten me as well...

Right you are, Ted. I had forgotten this. Thank's for the correction.

>You don't have to buy the AV option to get it. (And the AV option
>does not have a DSP in it like the AV 040 macs do.)

Yeh, Apple considered the PPC was so fast in native mode that a DSP
was not needed. One would think that a PPC _with_ DSP would be a killer
combination but...

Now a PPC-based Falcon would be something altogether different! :)

Nothing really major. It just seems like I was crashing a LOT more frequently when using 3.6 than I was with 3.5 so hey, why fight it? :) I have friends that use 3.6 all the time and claim no problems so go figure.

GFA 3.6 was actually supposed to be the "TT-compliant" version with support for TT resolutions and such. It has no support for Falcon-specific features.

Since most of my previous work was for ST resolutions only, GFA 3.5 was fine. But for anyone programming for TT resolutions, MultiTOS, or heavy Falcon use, I'd recommend a different language altogether.

There are two possible things.

1) It does not have 5 volts going to the termination resistor pin.

To verify that you have power connect up your Link to your
Quantum 120 and your CD-Rom to your Quantum 120. Make sure
each has a unique SCSI ID. Then run the program IDCHECK. If
it finds the Apple CD-Rom then the Link is getting power.

1) Your Quantum drive has the EP (Enable Parity) jumper installed.
This is most likely your problem. Find this jumper and remove it.

> snapshot utility. I know many people who use both for different tasks.

I agree with you Ofir about the Imagecopy point - they are quite
different tools which happen to cover some of the same ground.

The original point about bias reviews in STA is quite valid though.
They quite happily sing the praises of Redacteur, while not mentioning that
its graphics printing module is virtually unusable, and the program makes
a windows application look positively stable. They then try to tell us that
Warp 9 is on a par with NVDI, despite the timing evidence they printed in
their boxouts.

Subjectivity in reviews is to be expected but they push it far to far
for my liking. I will never again buy anything from the ST Club purely on
the basis of an STA review.

2527. ICD Pro Utils & Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 16:06:35 UTC
From: ap51@unix.brighton.ac.uk
Message-ID: <1994May9.160635.26536@unix.brighton.ac.uk>
Source record: 187344

Hi there,

I've recently bought ICD Pro Utilities for my Falcon but cannot get it to install ICDBOOT driver software on drive C of my IDE internal disk.

I've tried running INSTALL.PRG but it just dialogs 'You need an ICD Host adaptor' or something to that effect and quits. I then tried to run HDUTIL.PRG and that said that I need either a host adaptor or ICDBOOT.PRG! I tried booting from a floppy with ICDBOOT in the AUTO folder but that didn't help and I even fully repartitioned my IDE with the ICDFMT.PRG (which seemed to work fully from what the manual says). All in all I'm conpletely stuck, I suspect that some of the software may not be from the PRO version (though most of it's on the same disk which clearly states it's ICD SCSI Pro Utilities Version 6.5.1).

Has anyone had similiar problems or any advice that might help?

If it helps any here is the file sizes and dates:
ICDFMT.PRG 110818 bytes Date:05/01/94 Time:15:38:44
INSTALL.PRG 49492 bytes Date:05/01/94 Time:16:01:20
HDUTIL.PRG 66148 bytes Date:05/01/94 Time:15:34:04
ICDBOOT.PRG 43506 bytes Date:25/02/94 Time:11:21:32

Thanks in advance,

From: dunham@src.honeywell.com
Message-ID: <2qlsk5$idc@moon.src.honeywell.com>
Source record: 187350

I have a purchased software disk that is copy-protected, and I'd like to make a safety backup, especially since the company, DigiDesign, no longer supports the Atari. This is a "key" disk and is required for running. I have thrown every software copier at this disk to no avail - the copy is never recognized by the program as being the "master" disk. I seem to recall seeing ads for a hardware duplicator called "Synchro Express" that said it was 100% effective in backing up disks. If anyone owns one of those digital duplicators, can you help me make a backup copy? I can verify that I own the program.

Thanks,
Scott dunham_scott@htc.honeywell.com

>code is guilty of one or more of the following: Poor documentation and
>commenting, writing "spaghetti code", and poor logic.

What dream world are you living in? Have you seen anything beyond a textbook
in a programming class? Sure, we'd all love to have all the great documentation
that all the lovely textbooks out there tell us to put in. They make sense
but I have seen how stuff works in the real world and when it comes down
to whether you want code you can read and the cash you can get for getting
it to the client faster, getting it to the client faster wins out.

I'm not saying this is the way things should be (hey, what good is code
you can't read). I'm just saying that's the way things are. Sure, given
time you can fully document code but in professional settings with
professional deadlines, profits/functionality comes first and docs
come later. It's a money thing, not a computer science thing.

CH>drive it.

CH>cherborth@semprini.waterloo-rdp.on.ca

I purchased the Forget-Me-Clock II from E. Arthur Brown about 2 years
ago. I can send you the dirvers if you will send a 3 1/2 disk also have
your friend state if he wants this in the 360k or 720k mode.

There is a program to set the closk and a program to put in the AUTO
folder of the boot disk to have the clock re-set each time the computer
boots. This is a good product but the clock seems to gain time and need
be corrected about once per theee months.

Send to : Gary Ratliff; P. O. Box 892 ; Sanatorium, MS 39112-0892

Are you connected with Waterloo and are you familair with the suite of
languages they produced for the SuperPET? Next do you know if the
Spencer APL 6800 package for the Atari 520/140 is still available?

> If anybody has any ideas or suggestions, please let me know.

Have you moved anything around on your desk? Perhaps a speaker is now near
the monitor? Try picking it up and moving it around while turned on to see
if the distortion persists. If it does, you might want to look for a good
deal on a used mono monitor. You can get another one for about $50 or so on
the net, which is probably less than you would pay to get your current one
fixed. Be extremely cautious about opening it up. Montiors can hold a
lethal charge for quite some time, even when unplugged.

Oh, a scientific whack on the top might do the trick :-). I seem to have
developed a Fonz-like touch for equipment bashing. It works better
on equipment that I don't actually own, for some strange reason . . .

>normal conditions -- the default is that a reply will go to the same
>newsgroups as the thing being replied to;

It seems to me that you confuse Reply-To: and Followup-To: lines
here. Reply-To: lines redirect email replies to the article in
question to an email address that is different from the one from
which the posting originated. This makes perfect sense in cases
where a net.person's main account does not have Usenet access, so
s/he has to use some other account, where s/he doesn't receive
mail normally, for reading news.
Followup-To: lines redirect followups to an article to group(s)
other than the one(s) it was posted to. The only use of this
feature that is widely considered to be sensible is to narrow
down the set of newsgroups that will receive the followups.
Additionally, there are some groups that have associated
discussion groups. In these cases, some people consider it to be
good style to set a Followup-To: to the corresponding discussion
group when posting to the main group, so discussion of the
original contribution are automagically redirected to the
appropriate newsgroup.

The picture on my SM124 is jiggling now, it is worst in upper left hand corner and fine in the bottom right hand corner.
==========

I have found that 2 things cause jiggling:
a) Heat
b) Interference

Do you have a desk lamp or something near your monitor? I have one that makes my monitor act like it's on top of the San Andreas fault. Alternatively (but rather unlikely) it may be that the thing is overheating. Try to keep the vents clear; a monitor gets hotter than one might think. But mainly, look out for other electrical stuff going on around your machine.

Alternatively, or additionally, you should always enable the "new
variable names" feature if your interpreter supports it. It is
found in the menu that can be accessed after clicking on the
Atari logo at the upper lefthand corner of the editor screen.
When this is enabled, an alert box pops up each time you enter a
line that contains a new variable name, asking you to confirm
that you really mean to bring a new variable into existence. Very
neat for catching all kinds of typos, not only postfix
ommissions. I even patched my interpreter to have this checking
switched on by default.

>I think GFA-BASIC is hell. It creates code that is likely to break on
>any new computer/CPU/OS-version.

This is a problem of the implementation of the language, not a problem with the language itself. And since the GFA 4.0 system is rebuilt from scratch, i.e. done without reusing any code from previous versions (that's what I hear), there's hope that GFA 4.0 doesn't have these problems anymore.
The GFA basic language is not bad, or even "hell" at all. In the Windoze world, the popularity of Visual Basic demonstrates that Basic languages are needed and can be useful, and I am convinced that GFA could be developed into a comparable tool for the Atari series.

If you have two floppies, you can do this yourself by making a simple
cable. The instructions and software I am thinking of are for Blitzcopy,
but there are several available (including Synchro Express, which was a
commercial product).

Do you mean that there are few Atari computers owned by schools
for teaching purposes? In this case, you'd have to tackle the
problem by kicking those incompetent, and possibly corrupt,
people that decide about educational issues out of their
positions. I don't know about other countries, but I've heard
that at least one federal state in Germany ruled that schools are
allowed to buy MS-Doze boxes only. One school wanted Ataris
desperately enough to buy them with hardware DOS emulators...
Ever since I've heard about this regulation, I have wondered how
much Bill Gates paid the politicians to pass this utterly stupid
rule...

Source record: 187405
Cross-posted to: ont.micro,kw.micro,uw.sys.atari,comp.sys.atari.st,comp.sys.atari.8bit

In May, the Kitchener-Waterloo Eight Sixteen Thirty-two (KWEST)
Atari user group will have a general meeting which will also
be the last one until September.

Our 16-bit library currently has over 400 disks of public domain
and shareware software.
In addition, there will be our updated catalog disk and our
disk-of-the-month.

The group welcomes new members and visitors with
8-bits, 16-bits, or those just curious.

Meetings held at the University of Waterloo in the
Math & Computer Building.

Room opens at 7:00 pm. Meeting starts at 7:30 pm.

Wednesday, May 11, 1994
DCS Course Room, Room 2009 (2nd floor)

Call 725-2068 for more information.

Hope to see you there,
Dani Roloson

2547. UPLOADS: Artificial insanity programs.

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 21:23:11 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <768518591.42780@minster.york.ac.uk>
Source record: 187516

I have uploaded the following programs to several FTP sites.
They should hopefully work on all versions of TOS. There is a patch available
to make it work on your version of TOS calles STSFX27a.lzh (available by FTP)
I released earlier versions of these programs in the public domain, but if you
have one, replace it with the FTP version.

I have uploaded my programs to the following FTP sites:

atari.archive.umich.edu
ftp.germany.eu.net
nic.funet.fi
ftp.tu-clausthal.de
cnam.cnam.fr
ftp.cs.ruu.nl
ftp.uni-kl.de

STOS GAMESCOMPOSER 1.80m+ (stosgame.zip)
You just got STOS and you ran out of ideas, then press RETURN for an idea.
This is a silly program that comes up with ideas for games that are weird.

STOS SLIDESHOW 1.04 (stosshow.zip)
A Degas and Neochrome slideshow with some effects.

STOS RE-WRITER 1.02f+ (srw.zip)
This program, when given the structure of a text, fills it up with the
appropriate words, creating surreal prose and poetry. Contains many example
structures.

At the time I write this, ftp.cs.ruu.nl has them available in
pub/ATARI-ST/misc/stosgame.zoo
pub/ATARI-ST/graphics/stosshow.zoo
pub/ATARI-ST/text/srw.zoo

I have written all of these programs myself, and they are
Freeware/shareware/public domain.

Please mail me any comments, etc.

Andrei Ellman (ae-a@minster.york.ac.uk).

>Guess the Doom bug has bitten me as well...

There will be a review of Legends of Valour in this weeks AEO.
It should be available tonite (May 9) but to answer
your questions you can play it off floppies (REALLY REALLY not
recommended) or on a harddrive... it will run on a MegaSTe but not
a TT030. I highly recommend a 16/20MHz accel.

2549. SM124 Gets REALLY HOT

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 21:47:46 UTC
From: hsp4@columbia.edu
Message-ID: <2qmb22$t8@apakabar.cc.columbia.edu>
Source record: 187511

My SM124, purchased in December of 1988 gets REALLY HOT on the top panel.
I can touch it and all, but it's pretty bad. Is this normal? I know
that TVs and monitors warm up, but this is almost worrisome. It has about
2 inches (5 cm) of clearance from the wall, and nothing on top of it.

Then again, I'm UPSing it to the West Coast for the summer, so maybe they'll
break it and replace it... :-)

2550. CFV: comp.sys.atari.announce moderated

Newsgroup: comp.sys.atari.st
Date: 1994-05-09 23:10:06 UTC
From: rdippold@qualcomm.com
Message-ID: <comp.sys.atari.announce-CFV1@uunet.uu.net>
Source record: 187514
Cross-posted to: news.announce.newgroups,news.groups,comp.sys.atari.st,comp.sys.atari.8bit,maus.sys.atari.hardware,maus.sys.atari.software,maus.sys.atari.talk,ctdl.sys.atari.st,fido.ger.atari,fr.comp.sys.atari

```
FIRST CALL FOR VOTES (of 2)
moderated group comp.sys.atari.announce

Newsgroups line:
comp.sys.atari.announce Atari related hard/software announcements. (Moderated)

Votes must be received by 23:59:59 UTC, 30 May 1994.

After this CFV appears on news.announce.newgroups it will be sent to
the mailing list <lexicor-list@lexicor.com>.

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Yat Sui <ysiu@lexicor.com>

CHARTER (Yat Siu)

The proposed group will provide a forum for the announcement and
release of new atari related products:

* atari computer hardware and software
* commercial as well as shareware or related
* announcement from individual authors, companies or distributors
* press releases

Justification:

There are currently comp.sys.atari.st, comp.sys.atari.st.tech,
comp.sys.atari.8bit and comp.sys.atari.advocacy, the first three
groups are discussion forums for their (specific) related hard and
software. Product announcements in these discussion forums of new
releases by either commercial, shareware groups can often be
considered a service but not encouraged. The atari computer market is
not very widely distributed and it is getting increasingly harder to
know more about new products.

To begin with a product announcement group would encourage the
people to announce their new products for the benefit of all atari
computer users. It will also allow the reader to focus for a new
newsgroup only for product announcements or press releases and will
also make the reader more aware of his/her options.

HOW TO VOTE

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.
```

Your mail message should contain one of the following statements:
I vote YES on comp.sys.atari.announce
I vote NO on comp.sys.atari.announce

You may also ABSTAIN in place of YES/NO - this will not affect the outcome. Anything else may be rejected by the automatic vote counting program. The votetaker will respond to your received ballots with a personal acknowledgement by mail - if you do not receive one within several days, try again. It's your responsibility to make sure your vote is registered correctly.

One vote counted per person, no more than one per account. Addresses and votes of all voters will be published in the final voting results list.

Unbelievable or not.. It exists. In FEZ-A-BIT Atari-Messe in Berlin 7.-8.5 Linux was somehow introduced for Atari. If it works on smaller STs, or needs at least a Falcon or a TT - that I don't know.. I didn't see it myself. But it seems to be reality.

Btw - speaking of POWER... In FEZ-A-BIT there were at least 3 MEDUSA 040 computers fully working. And Good Heaven, what a speed..!!! 64 MHz 68040 with real 32-bit buses and fast architecture, 128 MB/s bus speed, etc.. Now, there we have something worth dreaming! DA's Vector e.g. absolutely flied.

2558. Fax software

Newsgroup: comp.sys.atari.st
Date: 1994-05-10 01:40:27 UTC
From: c-hjr@math.utah.edu
Message-ID: <C-HJR.94May9194028@solitude.math.utah.edu>
Source record: 187520

Hello!

I am looking for some fax software and I am coming up short. I
have checked wuarchive and have found some software in the umich
archives. However, I can only find software in german with german
docs, except for one 'demo' that has an error that won't allow
itself to be un-lzh-ed on my atari. I un-lzh-ed it on my internet
account and then zipped it, but the same error will not allow it
to be unzipped. I managed to unzip certain portions and then
just download the rest from my internet account, but it still had
problems. When I tried to drag it to the trash can I got an error
"path not found" while in tera-desk. It turned out to be a directory
that was causing the trouble. I tried to store something in that directory
but it gave the same error. I quit tera and tried to drag the directory
to the garbage, but it bombed (what a pain).

...I seem to have digressed....

The bottom line is that I am hoping that someone can suggest some
fax software, commercial or (preferably) otherwise.

Thanks,

Jeff Healey

I've seen other things being done with the falcon's DSP. On a.a.u.e, you can download software which allows you to ad DSP based effects to sound you record or reprocess. There is a program that uses the DSP to display JPEG format images. There is also a demo of the commercial program voxmail, which uses your falcon as a phone answering machine (it may not require the DSP, though). There are likely others; check the index at a.a.u.e and other Falcon archives for the full list.

Synchro Express copy cartridge. This cartridge plugs into the printer port and floppy drive port (requires a second floppy) and synchronizes the two drives to make perfect copies of any (except the ancient laser protection that was found on only the earliest ST software) protected disks. It works great for backing up software that has ornery protection. I recomend it to those that have games and applications that can't normally be copied and not for pirating software. It does much more than the Blitz cable.

Asking...$50 shipped.

Yes.

There is an Atari port in process. It will only be able to run on machines
which use the MC68030 processor as the old MC68000 just doesn't have the
hardware needed to support virtual memory, memory protection and instruction
restarting.

As far as I know, they are at the point of getting a first generation
booting kernel using a PC as a cross development platform.

Steve

The minimum config for a PC running Linux is a 386 PC with about 80MB disk
space and 4MB RAM. (Though I have heard people running with only 2MB!)

>Unbelievable or not.. It exists. In FEZ-A-BIT Atari-Messe in Berlin 7.-8.5
>Linux was somehow introduced for Atari. If it works on smaller STs, or needs at
>least a Falcon or a TT - that I don't know.. I didn't see it myself. But it
>seems to be reality.

It's only in its early stages, they've only just got a first generation
kernel booting. It will only run on 68030 based machines as it needs a PMMU
and the ability to restart instructions (which only the 68010 and above
have).

Actually, there are two groups doing separate ports of Linux to the Atari
platform, one on the Internet which is integrated with the mainstream non-PC
Linux porting programme and one on Mausnet(sp?), though these two are now
talking to one another.

>Btw - speaking of POWER... In FEZ-A-BIT there were at least 3 MEDUSA 040

>we have something worth dreaming! DA's Vector e.g. absolutely flied.

Hmm.. that's only about three times the speed of the TT030.. quite slow
these days.

Integer performance would be about 1 1/3rd times the speed of a Sun
SPARCstation 2 or a 486DX2-66 based PC. Integer performance would be about
that of a Sun SPARCstation 1 and probably about 2 to 3 times the speed of
the same 486DX2-66 based PC (Intel's maths co-pro is so slow!).

To put this into perspective, the Sun SPARCstation Classic, the bottom of
the range Sun is about 1.5 486DX2-66 based PC's for integer and 5 for
floating point stuff. Cost?... About £4000 plus VAT.

I wonder how much the Medusa costs?

Steve

Have you seen the price? It's 8000,- DM (about 6000 US-$); for this amount
one can get much better computers :-(

If it would cost only 50% of its current price, I would _maybe_ buy one...

Ok, I have found it:
You can get the Internet-Port from ftp.e-technik.tu-muenchen.de, folder
/pub/os/linux/680x0. This port is in an early stage, developers only. You
need MiNT with a Minix-partition, a 68030 CPU (Falcon or TT), 4 MB RAM und
less than 10 MB on HD. In addition you need a Bootdisk from the Amiga-port
but Bjoern says that he will fix that as soon as possible.

Ciao, Heiko.

I have the Following ST Item's for Sale:

ATARI MEGA ST2 upgraded to 4 Megs, complete: $300.

Plug and Play Hard Drive for your Atari, 65 Megs, with ICD Host Adapter, PC Power Supply, DSDD 3.5" Floppy Drive In a PC Style Tower Case. Room to expand and add more SCSI Devices. Complete and ready to run: $300.

ATARI SLM804 Laser Printer, complete: $300.

ATARI 1040STF Computer, with Mouse & Built in Floppy Drive: $150.

ATARI 520STM Computer upgraded to 1 MegaByte of RAM, with RF Port for Output to TV(B&W or Color), Mouse & a Repairable Power Supply: $75.

ATARI SF314 DSDD Floppy Drive with Cable and a Repairable Power Supply(I think?): $75.

ATARI SC1224 Color Monitor: $125.

ATARI SM124 MonoChrome Monitor: $75.

Or you can Buy an ATARI 520STM Computer Upgraded to 1 MegaByte of RAM, with RF Port for Output to TV(B&W or Color), Mouse & Power Supply, Atari Floppy Drive and a MonoChrome Monitor: $150.

REPLY in E-Mail or Call Ben at (503)256-9974. Everything Shipped UPS + Shipping and COD Costs.

^^^^^^^^^^^
There are some bugs on 80[23]86, maybe even on 486, but they
are know and could be dealt with. Linux does!
: <T-G>

Wrong!

Linux runs on a 386SX with 2 MB RAM and less than 30 MB harddisk.
(Even on HGC if you want)

Using X-window-system needs at least 4 MB (and maybe a little
more CPU-power)

Using Linux as a C-Developping system needs much more...

The first configuration will be sufficient for TeX DVIPS and
GhostScript.

2575. v21INF1: Introduction to comp.binaries.atari.st

Newsgroup: comp.sys.atari.st
Date: 1994-05-10 11:31:24 UTC
From: avg@cwi.nl
Message-ID: <CpL40C.9vG@cwi.nl>
Source record: 187537
Cross-posted to: comp.binaries.atari.st,comp.sys.atari.st

```
Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 21, Info 1

This article is posted regularly. It gives a short introduction to
comp.binaries.atari.st and describes how to submit binaries to the
group.

I am always looking for suggestions on how to improve the usefulness of
the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

------------------------------------------------------------------------

ABOUT comp.binaries.atari.st

The moderated usenet group comp.binaries.atari.st contains publications
or announcements of binary packages for Atari TOS computers. The
publications on comp.binaries.atari.st may be freely distributed as long
as no modifications are made to the packages. The packages may contain
public domain software, shareware or demos of commercial programs.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the
instructions below for submitting material intended for publication on
comp.binaries.atari.st.

------------------------------------------------------------------------

SUBMITTING BINARIES FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent
to avg@cwi.nl. If you are on a UUCP-only site, you can send them to
uunet!cwi.nl!avg. Note that comp.binaries.atari.st is not the correct
place to ask general questions or to ask, "Does anyone have software
that does X?" Post such requests to comp.sys.atari.st or
comp.sys.atari.st.tech.

If you want verification of arrival, say so at the beginning of your
submission, or in a cover note. I try to verify that a program works,
and if I can't get it to work, I may hold up posting it for a couple of
days. Please note that, except in rare cases, software without
documentation will not be published. The backlog from receipt to posting
varies from one to four weeks depending mostly on the set of submissions
currently in my queue.
```

If you are submitting both sources and binaries, PLEASE send the two separately. If I have to separate your sources from your binaries by hand, your submission will most likely sit on the back burner for a while, or be rejected outright.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

If possible, submit your binaries in a Zoo 2.1 archive. I will generally check that everything in the archive is OK and that the files in the archive make sense on an ordinary Atari ST system (i.e. they are MS-DOS style files), unless the archive is specifically intended for use with an alternative file system such as Minixfs. If necessary, I will re-pack the binaries using Zoo 2.1.

If you are submitting a demo of a commercial program, or a shareware program, please keep the amount of advertising to an absolute minimum. If you want to solicit orders, do it in a README file or an About... dialog box, not in a message that comes up every time the user does something. But feel free to post demo versions. Submissions which I feel are of an excessively commercial nature will not be posted.

THE STRUCTURE OF COMP.BINARIES.ATARI.ST ARTICLES

There are three types of articles in comp.binaries.atari.st: "information postings", "binaries" and "announcements". The binary postings are also called "Issues". The type of a posting can be distinguished by the subject line:

Subject: v06INF1: Introduction to comp.binaries.atari.st

This first word in the title identifies this as the first info posting of volume six. Similarly, the subject line shown below:

Subject: v20i081 (binary): deadwrtr -- Ouija-word processor part01/01

identifies this as the 81st issue in Volume 20, and it's a binary posting. Large programs are broken up into smaller pieces, and have subject lines that look like this:

Subject: v20i041 (binary): pet -- CBM PET emulator part04/39

The "References:" line, if present, points to the previous part of a multi- part program, so that newsreaders (trn, tin, nn, etc.) which can follow threads will recognize a large program as a single thread.

Reports of submissions of binaries to ftp sites such as atari.archive.umich.edu are also considered for publication. Subject lines for such articles are like the following:

Subject: v20a015: Edith Professional -- Desktop Text Editress, demo

The first few lines of an article's body are auxiliary headers that look like this:

Submitted-by: jackt@atari.com (Jack Tramiel)
Environment: high resolution, tt
Posting-number: Volume 19, Issue 80
Archive-name: rsn
Supersedes: atw: Volume 10, Issue 10-15

"Submitted by" is the author of the program. If you have comments about the binaries published in comp.binaries.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site. This will usually be the same as the "From:" line in the article's main header.

Certain information about the system configuration required to use the program is given on the Environment: line.

Environment: 1meg, medium res, high res

This means that the program requires at least one meg of RAM and runs in medium or high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self-explanatory. Examples:

high - runs in high resolution (monochrome)
medium - runs in medium resolution
low - runs in low resolution
1meg - needs 1 meg of RAM
ste - requires an STe
tt - requires a TT

The "Posting-number:" line repeats the volume/issue information for the aid of notes sites and automatic archiving programs.

The "Archive-name:" is the "official" name of this program in the archive. Large postings will have names that look like this:

Archive-name: desktop/part01

The "Supersedes:" header line, if present, indicates that the program replaces an earlier version.

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Updates to programs are usually announced in comp.sys.atari.st. When large changes are made to a program, the entire thing will be reposted to comp.binaries.atari.st.

To report bugs, contact the person listed in the Submitted-by header.
Often there is a contact address in a README file, too. I do not
maintain the programs I moderate, so don't send your bug reports to me.

If the program documentation mentions some file that isn't included in
the posting (for instance, a font editor's documentation might refer to
some sample fonts), contact the submitter, not me. I post articles in
their entirety, so if it isn't posted, I probably don't have it.

2576. v08INF1: Introduction to comp.sources.atari.st

Newsgroup: comp.sys.atari.st
Date: 1994-05-10 11:34:00 UTC
From: avg@cwi.nl
Message-ID: <CpL44o.A2M@cwi.nl>
Source record: 187538
Cross-posted to: comp.sources.atari.st,comp.sys.atari.st

Submitted-by: avg@cwi.nl (Annius Groenink)
Posting-number: Volume 8, Info 1

This article is posted regularly. It gives a short introduction to comp.sources.atari.st and describes how to submit sources or digressions to the group.

I am always looking for suggestions on how to improve the usefulness of the newsgroup, and can be contacted at the following internet address:

avg@cwi.nl

Annius Groenink, Moderator.

ABOUT comp.sources.atari.st

The moderated usenet group comp.sources.atari.st contains publications or announcements of sources and texts about programming for Atari TOS computers. The publications on comp.sources.atari.st may be freely distributed as long as modifications are documented and the original authors are mentioned.

THIS IS A MODERATED GROUP. YOU CANNOT POST TO IT BY YOURSELF. Read the instructions below for submitting material intended for publication on comp.sources.atari.st.

SUBMITTING SOURCES OR DIGRESSIONS FOR PUBLICATION

Items intended for posting or queries and problem notes should be sent to avg@cwi.nl. If you are on a UUCP-only site, you can send them to uunet!cwi.nl!avg.

If you want verification of arrival, say so at the beginning of your submission, or in a cover note. I try to verify that a program works, and if I can't get it to work, I may hold up posting it for a couple of days. Please note that, except in rare cases, software without documentation will not be published. The backlog from receipt to posting varies from one to four weeks depending mostly on the set of submissions currently in my queue.

If you are submitting both sources and binaries, PLEASE send the two separately. If I have to separate your sources from your binaries by hand, your submission will most likely sit on the back burner for a

while, or be rejected outright.

Sources can be submitted in ASCII form, but for large pacages, a ZOO 2.1 archive encoded using Dumas uuencode is preferred.

Please include a description of your program at the top of your article. Look at old issues of comp.binaries.atari.st for examples of the sorts of descriptions I'm looking for. In general you should indicate what the program does, on what types of Atari TOS computers, whether your program requires a certain amount of on-board memory, a hard disk or a certain screen resolution. If necessary, I may rewrite or add to this information in order to make the postings to the group more uniform. I can't check your submission in all possible configurations, and see what works and what doesn't. Without a description, your submission is likely to be rejected.

THE STRUCTURE OF COMP.SOURCES.ATARI.ST ARTICLES

There are three types of articles in comp.binaries.atari.st: "information postings", "sources" and "announcements". The source postings are also called "Issues". The type of a posting can be distinguished by the subject line:

Subject: v02INF1: Introduction to comp.sources.atari.st

This first word in the title identifies this as the first info posting of volume two. Similarly, the subject line shown below:

Subject: v06i081: godsrc -- Universe simulator

identifies this as the 81st source article in Volume 6. Large sources are broken up into smaller pieces, and have subject lines that look like this:

Subject: v06i088: decbustr -- VMS clone in ST-LOGO, Part03/08

Announcements of large source packages uploaded to ftp archives are also considered for publication. The subject header for such files looks like

Subject: v07a007: GCC 7.9.4 -- Same as 7.9.3, but considerably slower

Certain information about the system configuration required to use the program is given on the keywords line.

Keywords: MWC, Megamax, 1meg, high

This means that the program compiles with Mark Williams or Megamax C, requires at least one meg of RAM and only runs in high resolution. Following is a list of keywords; new ones may be added as needed. They are mostly self- explanatory.

Alcyon - Alcyon C (included with Atari developer's kit)
MWC - Mark Williams C

Megamax - Megamax C
Laser - Laser C
Lattice - Lattice C
C - Any C compiler
OSS - OSS Personal Pascal
BASIC - ST BASIC (this is not a joke!)
uuencode - program is uuencoded (uudecode required to unpack)
arc - program is archived (arc required to unpack)
zoo-high - program is archived (Zoo 2.1 required to unpack)
lharc - program is archived (lharc required to unpack)
high - high resolution
medium - medium resolution
low - low resolution
1meg - needs 1 meg of RAM

The References: line, if present, points to the previous part of a multi-part program, so that newsreaders (trn, nn, etc.) which can follow threads will recognize a large program as a single thread.

The first few lines of an article are auxiliary headers that look like this:

Submitted-by: david@bdt.UUCP (David Beckmeyer)
Posting-number: Volume 6, Issue 80
Archive-name: micro-rtx

The "Submitted by" is the author of the program. If you have comments about the sources published in comp.sources.atari.st this is the person to contact. When possible, this address is in domain form, otherwise it is a UUCP bang path relative to some major (backbone) site.

The second line repeats the volume/issue information for the aide of notes sites and automatic archiving programs.

The Archive-name is the "official" name of this source in the archive. Large postings will have names that look like this:

Archive-name: desktop/part01

REPORTING AND TRACKING BUGS AND PATCHES TO POSTINGS

Most of the time, bugs and updates will be posted to comp.sys.atari.st. Sometimes, "official" updates from the author will be posted submitted to comp.sources.atari.st so that they are archived with the sources.

Since there is no easy way to apply source code patches on the ST, changes to a program often result in a whole new version being posted.

To report bugs, contact the person listed in the Submitted-to header. Often there is a contact address in a README file, too. I do not maintain the sources I moderate, so don't send your bug reports to me.

I has only positve things to say about GFA-Basic.

All my programs written with GFA-Basic 3.5E E works with
all Ataris, even the Falcon.

I do not understand how some people write their code.
When they is not able to make it work...

2580. NVDI ET4000---Got It. But colours are not right

Newsgroup: comp.sys.atari.st
Date: 1994-05-10 13:19:24 UTC
From: avg@cwi.nl
Message-ID: <CpL90D.C0J@cwi.nl>
Source record: 187545
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I got NVDI ET4000 for my Spektrum 1 card. It's great.
Speed gain is not enormous, but the software allows for 16
colour modes, which give an acceptable speed on a 32MHz
68030.

There's one problem though, and I hope someone on the
net knows how to solve it: the colour tables seem to be
wrong-endian, which is to say when I move the red slider
up, I get dark--light eight times as opposed to once.
An indication that the bits, nybbles or bytes are reversed,
if you ask me.

Does anyone know the ET4000 internal registers? Or have
a patch for the NVDI binary?

Is one of the Behne brothers listening to this group?

Anh how long have you been working in the real world, and on what sort of
projects? I think you're a bit out of synch. Remember, you don't have to
fully document your code, just make it readable and understandable. Well
chosen variable and function names, and a few comments where appropriate is
all it takes

I don't think that will happen. As far as I can see there isn't one thing
an Amiga can do and a PC can do. The former can only play games and do some
(nowadays minor) video stuff, and the latter is only 'good' for WordPerfect.

2586. FORSALE: Atari Mege ST

Newsgroup: comp.sys.atari.st
Date: 1994-05-10 16:08:26 UTC
From: ctorres@alumni.caltech.edu
Message-ID: <2qobhq$f6b@gap.cco.caltech.edu>
Source record: 187550
Cross-posted to: comp.sys.atari.st,la.forsale,misc.forsale.computers.other

I have an Atari Mega ST forsale with the following items:

20 Meg external HD
Keyboard
Mouse
Internal floppy drive
SC1224 Monitor

The best offer gets it. You pay shipping, or if you live in the
Pasadena.South Pasadena area something can probably be worked out.

Whenever questions like this arose with Atari stuff, the distiction made was usually the technical legal one: "the code is _not_ public domain (i.e. Atari reserved copyright), but if you pass it on (unmodified) as freeware noone will kick up a fuss".

Right. Actually, the most problem I had with 3.5 or 3.6 was when I tried the
German "patch libraries" tips to kill Line-A (among other things).

> GFA 3.6 was actually supposed to be the "TT-compliant" version with
> support for TT resolutions and such. It has no support for Falcon-
> specific features.

No, I didn't mean F030 specific, rather 68030-compliant compiler library.
> Since most of my previous work was for ST resolutions only, GFA 3.5 was
> fine. But for anyone programming for TT resolutions, MultiTOS, or heavy
> Falcon use, I'd recommend a different language altogether.

Yeah, though when I started looking at my HiSoft 2.1 manual again, I got a
headache. Don't get me wrong, a fine product, but my internal fuzzy logic seems
to be GFA compliant after these years of coding, rather than GeeWiz based ;)
(... HS default is pass by variable, GFA is pass by value, HS defaults to short
integer, GFA to long, and of course another editor...)

> run HDUTIL.PRG and that said that I need either a host adaptor or
> [...]

Scheesh... sounds like you _don't_ have the PRO level. Those dialogs shouldn't be there except when running the AdSCSI or Link versions which do test for the hardware. If you run ICDBOOT.PRG (yes, even from desktop is ok), it should report itself as the Pro version 6.x.x even if it can't find any valid drives.

> All in all I'm conpletely stuck, I suspect that some of the software may
> not be from the PRO version (though most of it's on the same disk which
> clearly states it's ICD SCSI Pro Utilities Version 6.5.1).

Strange, though I have in fact encountered the problem of commercial disks having been incorrectly made with wrong contents. No often, but still...

Source record: 187419

The requirements of 8MB RAM and 170MB HD are relatively reasonable for a UNIX-like operating system running X-Windows. One could not get away with less by "moving up" to a 68000.

In other words, it's not resource intensive because it's Intel-based, it's resource intensive because X-Windows is a pretty big graphics interface building system. Moving over to a Motorola chip wouldn't allow you to cut the amount of memory or other resources to any great extent.

(Shock of the month: I dropped by a Mac store and inquired about what they'd sell running their version of Unix. They couldn't imagine the idea of running with less than 48MB of RAM and a gig of disk space. I don't think they believed me when I said that Sun had been selling machines running BSD Unix in 8MB for years... 'Twould have been foolish to mention the fact that Unix was developed on DEC machines which had a mere 256K of RAM. Or was it 128K...)

In the USA it's roughly 2,500 but you need to add harddrive/+ram and
diskdrive so a complete 8 Meg setup and 300 Meg Harddrive with 1.44
and ET-4000 Graphics Board in full tower should be abou 3,200-3,300

That's U.S.A., I believe the price in Germany is around 8,000DM or less

Cheers

I think you're on drugs. Linux works fine on a '386sx/20 with 2M of RAM
and a 20M hard drive. You can run Linux off of two floppies if you want
to.

If you want to run X windows, you will need more RAM and disk space. A
faster CPU will help, too.

UNIX is generally large, but Linux is small and fast. Then again, UNIX
also does a whole lot more than DOS or Atari GEM.

I've looked on the FTP sites that I can access at a reasonable speed...
I've asked archie...

Where is HOWFAST, the disk speed tester?

It's a pity there isn't more of an effort made to mirror German Atari
archives onto the official Atari archive at umich.edu; when I uploaded
UnZip 5.1, I put it on atari.archive, and about a half dozen German
sites....

That may be so, but it doesn't mean Samsung will continue to produce Amigas. Afterall, Canon obtained NeXT hardware but hasn't produced a NeXT computer to my knowledge. In fact, I believe they converted the factory to produce laser printers.

***** TEMPUS 2.2 *****

Hi Does any one know about Tempus 2.2..

From the Demo version that is on tu-berlin,
It looks like it works with Overscan and ADspeed..

Can any one confirm this....

What are the canges from version 2.07....

If you are not using Tempus, then you are not using your Atari, this would be
the Best Text Editor for the Atari computers...

From memory this was the very first German program to be converted to English..

There is a Full working version on ST-Users Feb 1994...version 2.07 that is..

The Keyboard can be set up for any keys that you like, has built in Keyboard
tables and the same with the printer, the printer can replace words with what
ever you like.....so like the Keyboard it has Printer tables....

Hisoft in the UK sells the latest 2.2 UK, version....

|> Thanks.
|>
|> Hallvard, Oslo, Norway

```
Hi,
I have written a program that places the norwegian characters on the usual place, and
let you access the keys that originally were there with the ALT key.
Unfortunately, this only work with newer TOSes (TOS >= 4.0), because it relies on
functionality in TOS only added thereafter.
(the _AKP cookie is an indication of the presence of this functionality)
However, if you use multiTOS, this feature is added to the new AES, so the keyboard
tables my program generates can be used with multitos. Just copy the generated
keyboard table to the multitos folder, and you won't even need the auto-folder
program (which is intended for Falcons without multitos).
The program can be found on Lars Erik Oesteruds BBS (ABK-BBS) in Norway.
I also think he has a program that he uses on his MegaSTE (TOS 2.06) to access
the norwegian characters.
Give him a call !

|> "X on ST/TT" before ATARI or any other party comes up with a stable
|> and long time supported tcp/ip package that runs also with MTOS (or MiNT),
|> uses effordable ethernet hardware and is well documented.
|>
|> *** Did You hear me out there? Its a challenge! ***

The challenge has allready been taken.
Check out mintnet on atari.archive.

Also, work is started on porting X using this package. It seems to be
going very well so far.
No server running yet, but... atleast the clients are done, including twm.
It should be possible to run xclients on a TT, with display on a Linux
X-server via SLIP, but noone has actually tested this yet.
Anyone want to test one of my client programs ? Send me email.
(They are compiled with -m68030)

On the tcp/ip side of things, you can now run nfs on ataris connected
either via serial interface or the parallell printer port.
There is also someone having a go on a scsi-ethernet device.

So there.

Hello all,

I have the following items I NEED to sell - I'm going back home to
Australia in about three weeks.

SM124 monochrome monitor $75
520ST w/ Tech Specialties board $60
SF354 SS floppy drive $20
SX212 1200 baud modem $20
Parrot 1200 baud modem $20
Computer power supplies ..... $20 each
Panasonic KXP-4410 laser printer
upgraded to 2.5Mb $500

all prices are NEGOTIABLE and don't include shipping. E-mail me if any of
you are interested (or want to negotiate).

Rick

P.S. I also have WordUp 3.0 (word processor) for $30.
P.P.S. I'll consider trading (especially for a Tech Specialties Combo Tower
case)

Nah, not ST.
But for TT or Falcon, yes there is a bootable Linux kernel.
It requires at least 4 Mb of ST-ram.

Topics:
Announce of Linux/68k pl2 for Atari

From: <linux@mailhost.uni-koblenz.de>
Subject: Announce of Linux/68k pl2 for Atari
Date: Mon, 9 May 1994 10:58:42 +0300

Hamish moved the file ata_lx02.lzh to the src/ directory on tsx-11. Bjoern has announced the next patchlevel to come very soon. Here the read.me file from the archive:

****

ATARI Linux 68K Version 0.01 PL 1

Release Date : 20/4/93

Based on: : Amiga Linux Kernel 0.07 and 0.08

Chief developer : Bj&#65533;rn Brauel (In MAUS-Net : Bjoern Brauel @ WI2)

[Note: Bjoern_Brauel@wi2.maus.de from the Internet]

Additional developers : Nobody yet

****
see GNU Public License for release notes

This is the first release of Linux 68k for ATARI 030-computers.

This document is only a (very) short introduction ! Future versions will contain more detailed informations about ATARI Linux 68K.

Hardware you need to compile Linux 68K:

Atari F030 or TT030 with a minimum of 4 megs ST-Ram.
2 (!) Harddrives (one for ST-stuff other for Minix FS)
You CAN use only one Harddrive but keep in mind that
Linux or MinixFs/MTOS could cause data-loss.

Software you need to compile Linux 68K:

MTOS (with MiNT 1.04 - 1.10)
MinixFS (I use 0.6 PL9)
Gemini 2 (1.99)
GCC (2.5.8 and linker in linux/tools)

General information :

- Use the linker in "linux/tools"
- to start compilation,first set the environements of GNU to the
Linux directories !
- some compilations of GNU do not allow to use filenames > 8+3 !
Check whether your GNU does or not . The .mup files are
set to use a GNU that cannot handle fnames > 8+3 ! Change them
if you need .
- All .o-files which are needed to build "vmlinux" are being transferred
into linux/makedir. When you build the bootstrap , you can also
find "bootstrap.ttp" in "linux/makedir" . -> Start Linux only
in "linux/makedir"
- actually the bootstrap does NOT allow to configure vmlinux via the
command line ... So e.g you want to change the ROOT_DEVICE from
"fd" (floppy) to "rd" (ramdisk) you'll have to set the commandline
in "init/main.c" (strcpy(boot_info.command_line,"root=/dev/xx"); | where
xx is the device -- actually only "fd" or "rd" !)
- The floppy-driver is everything else but a good implementation !
I will change this later but for now it should be enaugh . It is doing
what it's supposed to do .
- THIS version doesn't work directly on a TT . You'll have to make
some changes is "tools/atari/bootstrap.c" ; The second MFP
has to be turned off as long as the exception handler doesn't
support the second MFP.
- If you make ANY relevant changes ... contact ME !

Bye
Bj&#65533;rn

End of 680X0 Digest
****

2612. DBman 5.3(or...Relation databasing!)

Newsgroup: comp.sys.atari.st
Date: 1994-05-11 04:03:23 UTC
From: mbmccabe@bronze.coil.com
Message-ID: <2qpleb$kbf@bronze.coil.com>
Source record: 187418

I seem to remember hearing that the new DBman (v5.3?) is suppossed
to be either the clone of or at least compatible with DBase IV. True?

Does this mean that we Atariians actually have a relational
database to play with? Not just another flat-file something or other
information organizer?

Any and all discussion and comments are welcome, as I find myself
in the market for some such product! :-)

This may be an obvious question, but do you have a termination plug on your last scuzzy peripheral? From working with macs I learned the hard way that you must terminate the end of the line, ie after the printer that is chained to the hard-drive which is linked to the Lynx connector.

At the Midi And Electronic Music Show (MEMS 94) HiSoft were present. I managed to get one of their new catalogues, which had Diamond Back 3 in it, but there were no copies at the show. When I get home I will look through the book and check the details for you.

It's surely more. The price in Deutsche Mark is 8000.-
And one Dollar (i'm not sure in that point) is about 1.80 DM - 1.90 DM or so.
Correct me if i'm wrong.

```
But i AM sure with the price of the MEDUSA. It's really that expensive. Included
is 8MB RAM, i think and a harddisk of a size i've forgotten.

(Seems that i know quite few things... :-) )

greetings,
Michael

Untrue. There are some damn fine games on the PC at the moment. I use my
Falcon for programming and music, but like to relax now and again by
playing games. Las tyear I bought an A600 for just this, but now I'm
selling it because all the good stuff is either for PC only, or would work
better on a hard disk system. I'll probably buy a PC at some stage - if
nothing else, the size of the market for any software I might write is very
tempting.

Oops, I must have missed the bit in the definition of shareware that stated that once a program is no longer being actively developed it becomes free. Continuing to use shareware without paying for it is no less piracy than ripping off conventionally distributed software folks. It might be easier to make excuses to yourself, but its still theft.

[about Tempus 2.2]

: What are the canges from version 2.07....

Since the original programmer doesn't work on Tempus any more (at least
according to CCD, the company who developes and sells Tempus in Germany),
other programmers at CCD have made only minor modifications, mainly
aiming at greater compatibility with "exotic" hardware. That is,
Tempus now works with more different video hardware than before etc.
(Sorry, don't have my CCD info sheet with me.)

Personally, I like Tempus a lot, but tastes are different :-) In fact,
this is one of the few Atari programs which (IMHO) are still better
than on other platforms.

>have had probems setting it at 40/20
I can confirm that, since I actualy have one installed right now. It speeds
your falcon considerably, especialy when you boost the bus up to 20MHz.
(Why not higher? See my article on Ulm faire in the next AEO).

I actualy have problems when using the 20 MHz bus settings, but the problems
go away if I turn off the blitter. (You need NVDI to do this for resolutions
other than 256).

Even without the blitter, the machine feels so much faster that I don't
want to go back. In fact, since a friend of mine, who has a revision C board
(mine's a B) in his falcon has no problems at 20/40, I am considering selling
my current machine and immediately buying a late revision falcon, so I can
use the board at it's max. For the price (400 DEM without instalation) it is
very good indeed.

Other things in that line worth thinking about are eagle sonic (more expensive)
and BlowBoost (still under development) and, of course, afterburner 040
(still under development, expected price arround $1000).

2646. HD/DD floppy Problem!

Newsgroup: comp.sys.atari.st
Date: 1994-05-11 15:55:27 UTC
From: rrice@netnews.upenn.edu
Message-ID: <2qqv5f$qei@netnews.upenn.edu>
Source record: 187469

[Article crossposted from comp.sys.atari.st.tech]
[Author was Rob S. Rice]
[Posted on 11 May 1994 15:52:40 GMT]

He-e-l-l-l-p!!

I am the proud owner of a Mega STE 4 with TOS 2.06 and an Atari HD floppy conversion kit, which has previously given me no trouble.

I was attempting to do my first hard drive back-up in some time when, on the first disk, I got a "Bad Disk" warning after Diamond Back 2.42 made its usual repeated tries to reformat and recover the data. Every time I put in a new disk, the same thing happened, although Diamond Edge and other disk scanners found nothing wrong with any of the disks I tried.

When I got out of Diamond Back, I found that my HD drive ALWAYS stops formatting on track 45/6 of a DD/DS format and gives me an "DOS Error -16 Message." It can format any HD disk or format without trouble, and scan and read to a DD/DS floppy. It just can't format one--or do whatever it is that Diamond Back does as part of of the back-up procedure. I was able to format and scan all the DD/DS disks involved on my old SF 314 external DD/DS drive.

HELP! Do I have to replace the drive I got with my conversion kit? I tried cleaning the drive with a cleaning disk, and the problem has persisted through that and multiple re-boots.

Any help would be very much appreciated.

I don't understand your post, you complain about Gemulator's
ability to handle copy protected software, then go on to
mention that you're going to buy a PC emulator. How
compatible is your PC emulator? With today's software, a 286
is not considered a useful machine. There is a tremendous amount
of software that requires a 386+ machine, so your compatibility
is severely limited. On the other hand, the majority of ST
software works just fine on the Gemulator.

Yes, it is available now please contact Oregon Research in the States or
HiSoft in Europe for upgrade information.

>
>>What SCSI tape drives will it support? Will it support a Digital TK50
>>tape drive with a Link 2 SCSI interface?

The DB3 Tape driver is designed to support all SCSI tape drives and has
been tested on over 100 different models from ancient 40 meg's to
10 gig DAT drives. If you can talk SCSI to it, it will work.

Best regards,

Bob Luneski

2650. QUESTION: which wordprocessor to use?

Newsgroup: comp.sys.atari.st
Date: 1994-05-11 16:29:20 UTC
From: hallvart@ifi.uio.no
Message-ID: <2qr150$597@sognsvann.ifi.uio.no>
Source record: 187459

I'm looking for a decent wordprocessor package that will let me intregrate
text (with different font styles) and graphics (.IMG).

I'm using "write on" now, which was supplied for free with an issue of ST Format
some time ago, but the problem is that images take up a whole line. I can't put
text beside the image, or another image beside that one, and fonts are a bit tricky
too. There's a screen font and a printer font, and as I don't have a hard disk
I can't have an unlimited amount of fonts, because it needs to have the default font
on the disk when printing, so how can I do that with a 720K disk when it's already
mostly filled up?

I would like a wordprocessor that gives you a what-you-see-is-what-you-get display,
that lets you change to many different text styles at an impulse, without having to
plan every detail first, like assigning a GDOS system etc. (ugh!!), and lets you put
images anywhere you like.

I guess a wordprocessor like that would be commercial, but I don't care if it just does
what I want it to do. But it would be great to find something like that as PD/shareware
though!
Thanks.

Compo's FalconSpeed 286 emulator is nifty and relatively fast, but it lacks the 386 protected mode that is so important for many applications. If they'd used a 386xs, or given the option of doing do, then I'd be much happier about it.

I was wondering with what configurations I could possibly have LAN Support with Mint. PowerNET doesn't work with Mint (or Geneva for that matter..does it work with Mag'x?).

I can give up for now a complete network ;-), but I've been wondering how can I get a comms program to support Lan properly? I tried with HSModem but on a falcon it _did_ seem rather flakey, and connect does not support LAN on a Falcon as it seems.

I would appreciate any helpful tips and/or solutions for a good connection between Falcon and TT via Lan.

I have the following stuff still lying round even though I sold my ST over
a year ago:

Books:

Compute's ST programmers Guide

Abacus
2 ST INTERNALS
3 GEM Programmers Reference
4 Machine Language
5 Tricks & Tips
6 Graphics & Sound
10 Introduction to MIDI Programming
11 BASIC to C
12 3D Graphics

Software:
Flight Simulator 2.0 (color version works on new TOS)
dBMAN V dBASE II+ power on Atari ST Ver:5.1
MIG-29 Fulcrum - wartime flight simulator
Michtron Super Conductor (simple sequencer)
gSTc Atari ST C compiler

I prefer to sell a complete as possible, though I will take offers on
seperates and consider selling as such if most of the stuff is spoken for.
I would like $5+$1 shipping for the books or $35 (including my paying shipping)
for all of the books.

The Software I will sell for $40 for all or make offers.

Why exactly do you want this ???

If you want a multi-user machine you could try using MiNT/MinixFS/Init which will
give you a very UNIX-like system with passwords and restricted access to files,
folders etc.

[sorry if this is a bit over the top compared to what you actually want]

Bye for now,

Andrew

2661. 1040 STe / Spectre GCR system FOR SALE

Newsgroup: comp.sys.atari.st
Date: 1994-05-11 21:02:21 UTC
From: a-aulick@ux4.cso.uiuc.edu
Message-ID: <2qrh4t$8us@vixen.cso.uiuc.edu>
Source record: 187474

Atari 1040STe / Spectre 3.0 system for sale:

---***<<< BUY!! BUY!! BUY!! >>>***---

o Atari 1040 STe with 2 meg RAM, internal DS/DD floppy, TOS 1.62!

o Atari SM124 High resolution monochrome monitor with 3rd party
anti-glare screen attachment and sidearm paper clip!

o Gadgets by Small Spectre GCR 3.0 Macintosh emulator, with ROMs,
appropriate Mac system software and some Mac shareware!

o Panosonic kx-p1124i 24 pin multi-mode printer with nice printer stand!

Everything comes with original boxes/packing/manuals/etc!

. The 1040STe and Spectre GCR are in mint condition!

. The STe comes with some 256k SIMMs if you want to upgrade to 2.5 MB!

. Spectre GCR 3.0 is fully registered and upgradeable to 3.1, with
system 7 compatibility as soon as Dave gets it out the door, which
should be Real Soon Now!

. The monitor goes off if you turn the cord just the wrong way, but is
otherwise perfect. It's perfectly useable now, and it'd be a quick
fix for an electronic fixit type!

ASKING ONLY!: Spectre GCR: $218 OBO!
1040 STe: $325 OBO!
SM 124 Monitor: $65 OBO!
kx-p1124i printer: $117 OBO!
The whole schmeel: $629 OBO!

I need to finance a college education. Obviously, I'd like to get as
much as possible for this excellent equipment, but I need to sell it
sometime this century. Any and all offers will be *eagerly* considered.

The system is in Takoma Park, MD (near Washington). We'll talk if it
needs to be shipped.

Thank you very much,
~Adam Aulick

>but there are several available (including Synchro Express, which was a
>commercial product).

I don't think the Synchro Express is be sold at the moment, also there can be
big problems with it, the main thing is Disk 'A' must run faster than Disk
'B' or you will end up waiting all day....

The Blitzcopy is a bit dumb, but the Synchro Express uses a Chip for syncing
the drives and data, that is why your 'A' drive needs to be a tad faster than
'B' drive, if 'B' drive is faster, then the 'B' track would have gone by while
the 'A' drive is still reading it....

>* Mickey Boyd *

There are disks that can't be copied, like the Readysoft stuff....

> to a convenient charity.

What would constitute a "convenient charity"? I've donated to charities on occasion, but havn't really given it much thought; does it help one's reputation any? Can it fixed a tarnished one? Does one get any medals for such donations?

Also ... is there *any* way to do assassination missions with a huge ship? (I've got the biggest, bulkiest Clipper ship I could find, and I don't want to give it up; I like my turrets!) I've tried, but my ship is too slow to follow my quarrey into hyperspace; he gets there long before I do. I've tried saving my game a week before he's to take off from where he launches from, then hyperspacing to his intended destination ahead of time and waiting for him; but he never showed up. (Or perhaps he did, but in a very different location of space) I've tried blasting him right from orbit as he takes off, and thiough it does achieve my goal, I get a huge squadron of police on my tail and my reputation shot to hell -- even though I pay the appropriate fines.

Source record: 187490

Cc:

Ok, some requests here:

I have a Spectre. 3.0 (the latest, I think). Also a Canon Bubble Jet BJ200 (the latest). The problem is that fromthe Mac mode, nothing prints.
The usual test mode prints a little line saying that the printer is connected. I use the chooser to pick epson lq-2550 mode,which is what the BJ's dip switches are set for. All seems well until i try to print. Then I get a 'file is corrupted... cannot print...' sort of message.
I have tried: MacWrite II, Word Perfect for the Mac (v2) and Microsoft Word 4. Same thing. So it is a system fault of some kind, not a program fault. System: 6.07, True type fonts (with the right True type Init installed as per instructions). Anyone got any suggestions? Files written in any of these programs can be saved to a Mac disk and printed on Mac systems. But not fromthe Atari itself. (ST Mega, 4 MB). Can someone with Spectre experience help?

b) I have one of the older 44mb Syquests. Unfortunately, I did not get ICD software with it when I bought it second hand. My regular software is Supra,which I have on two other HD ataris.
Will this work withthe Syquests? How does one (a) partition a syquest so that Mac and ST partitions can exist on the same cartyridge,or is it more sensible to have separate cartridges formatted differently?
My ordinary HD has two Spectre partitions, recognized as SI and SII and mounted by pressing the Function keys -- ok,no problem there. How can I partition the Syqquest and let the computer know that these are new drives?? The manual (Toad computers) does not help at all.

RI> Please, don't let my mouse die! I can't afford the

The rememdy if you can't afford a replacment mouse is to use the keyboard equivalent commands to move the mouse. I trioed this for a while and it soon grows tiresome. Finally I broke down and purchased a Beetle Mouse from: E. Arthur Brown Company; 3404 PAwnee Drive; Alexanderia, MN 56308. They were charging $29.95 whle the genuine Atari Mouse had an asking price of $49.95

The keyboard replacement was to do all the movement with the mouse which could be done and then key in the sequence to get positioned etc. This is not easy and thats why you will soon opt for replacement.

some easy ones ...

1. Has anyone installed Minix on a Falcon 030!?
2. Does it work ;^)
3. Is Minix PD/Shareware/Whatwear!?
4. What is the latest version!?
5. Approx size of Minix!?
6. Is it Unix compliant, or just very close (i.e. re-compile of sources!?)

Regards,

Karl.

sheppard_r@ix.wcc.govt.nz writes:
>Hisoft in the UK sells the latest 2.2 UK, version....

No they don't -- the version that was given away by ST user was the
latest (and the last, probably) translated version.

IIRC, it doesn't work on 68030 machines, nor most graphics cards. Nor
MultiTOS, I suspect. Apart from that, it was a fine program :-)

Message-ID: <CpoM2E.B6q@ucdavis.edu>
Source record: 187202

I have a few 1040ST systems for sale, I will test again, but all are in great working condition:

2 1040STf with mouse...
2 SC1224 Color monitors
1 SM124 Mono Monitor

Like I said, all work great. We had three, I'm keeping one, the rest are for sale.
As you might imagine, I'd like to keep the units together as much as possible and sell as complete systems, but I will hear offers for individual pieces as well since I want to move this stuff...

I've been seeing lots of different prices for this type of stuff, so I don't know what to ask for it, I only ask for offers that seem reasonable.

Reply via e-mail to ez007793@chip.ucdavis.edu

Thanks a lot,
Brian

Hi there,

Is it possible to use a PC SVGA monitor with a basic 520STFM ?

If so, are adaptors readily available, cheap...etc?

Also, if it is possible, is there any complex circuitry in the adaptor or
is it possible to make one by connecting the relevant pins together ?

If I can do this, could I then use the ST in high res screen mode ?

Thanks,

Bruce.

|>
|> >greetings,
|> > Michael
|>

No wonder that the Medusa is so expensive - it isn't a mass product;
every machine is assembled by hand and the amount of units sold is
very small. It's a pity somehow ... a machine that runs applications
like Calamus SL 7 times faster than a TT (statement from a professional
DTP user on the ProTOS computer show), but that one can hardly afford.

For 8000 DM (4700 US$), I get a very well equipped PowerMAC which
already is a big leap ahead the 680X0 technology ...

>> to a convenient charity.

>What would constitute a "convenient charity"? I've donated to charities on
>occasion, but havn't really given it much thought; does it help one's
>reputation any? Can it fixed a tarnished one? Does one get any medals for
>such donations?

A convenient charity is one which advertises on the bulletin board
at the station you're docked to. :)
I usually use the Ban Military Drives charity, but that's only cos
I have a grudge against military drives after being fined for smuggling
the radioactives it produced...

Donations boost your rep - give you the appearance of a nice friendly
generous person. You can fix a tarnished rep quite easily by donating
a lot. You won't get any medals for it though, just thanks from the
charity.

>Also ... is there *any* way to do assassination missions with a huge ship?
>(I've got the biggest, bulkiest Clipper ship I could find, and I don't want to
>give it up; I like my turrets!) I've tried, but my ship is too slow to follow
>my quarrey into hyperspace; he gets there long before I do. I've tried saving

Well my Panther Clipper (ZQ-733) has a small plasma accelerator mounted
on the front which I use in preference to the turrets. In Engines Off
mode you can spin the entire ship just as easily as you can spin a turret.

It's a mistake to let the guy go into hyperspace - very rarely do they
go somewhere in your range, even more rarely can you find them when they
get there.
So you have to do one of two things:
a) Blast them before they go into hyperspace. (Easy with a plasma accel.)
b) Prevent them from hyperspacing. You can normally do this by hitting them
a couple of times with your lasers - then they'll attack instead of
running away. Or you can send them a 'surrender or die' warning and then
they might come for you. Once I prevented a cobra from getting away by
sending an SOS - believe or not the guy turned around and came back.

BTW - Don't attack with missiles - kills with missiles aren't counted as
done by you...

>of space) I've tried blasting him right from orbit as he takes off, and
>thiough it does achieve my goal, I get a huge squadron of police on my tail
>and my reputation shot to hell -- even though I pay the appropriate fines.

If you pay the fine instantly then it won't affect your rep. Doesn't seem to affect mine anyway. A cloud of vipers is a good way to boost your kills and elite rating - just take em out one by one, their 1Mw beam lasers can't penetrate a Panther with 100 shields. And there's always the energy bomb...

2688. Do real people work at ICD?

Newsgroup: comp.sys.atari.st
Date: 1994-05-12 13:58:51 UTC
From: trevor@ccc.govt.nz
Message-ID: <1994May12.135851.1@ccc.govt.nz>
Source record: 187487

Is something I should know about work scheduling practices at ICD?

I ordered a Link from them in November and I'm still waiting for it. I gather from previous discussions here that some shipping was delayed to accommodate an upgrade release, but I'm getting rather concerned that my package may have been lost at sea somewhere.

Everytime I phone them, their 'Electronic Assistant' never puts me through to interactive liveware (real people :), and there hasn't been a reply to the messages I leave.

Is there a good time to phone to be able to speak to a real person to find out whether or not (and possibly when) the thing was actually posted?

From: rimfax@bu.edu
Message-ID: <2qtffv$soj@news.bu.edu>
Source record: 187211

Thanks to Everyone who has posted a response to my Mouse
Illness! I have downloaded several virus detection programs and
killers, but there have been no infectious diseases running rampant
through my system. (or at least none that were detected :-O)
I booted my system just by itself (no floppy, no HDD) and
discovered that the problem is either with the mouse or the
Keyboard. I have a MEGA ST2. I replaced the Keyboard cable (I had
an extra), opened up the mouse (cleaned it as best as possible),
opened up my Keyboard (Yich!! Hair, dust, and Gwee!!!) in which I
could find no damage, no loose connections, etc...

Oh, well... Any other ideas???

I am currently using a combination of the mouse, and the <alt> <arrow>
keys, needless to say that it is annoying.

Is there any shell, such as gulam, which can be used instead of the
desktop???

Thanks again!
Wayne

2690. Teletext Adaptor

Newsgroup: comp.sys.atari.st

Hutch,
There haven't been any reviews in the American magazines. It is
for sale and Compo told me that they'd send me some information
about it. I'll post it when I get it. For now, all I know is that
Compo claims that it is 100% compatible with a 286 and all of the
ports are supported (except ports not used by IBMs like the cartridge
port). The MIDI ports also aren't supported. Again David Troy
from Toad said that the speed is roughly equivalent to a 486SX
running at 25MHz. For me, that's pretty decent. I am wondering
how Compo's 486 emulator will be?

```
The new HENSA machine is now on-line as an experimental service. Please
log in via telnet, ftp, UK JANET, gopher, World Wide Web on

mic2.hensa.ac.uk

I will be uploading some more software tonight (hopefully another five
packages), so keep an eye out.

I hope you like the revived atari section....I have a lot planned.

If you would like to be put onto our mailing-list, then send a message
to archive-server@micros.hensa.ac.uk, no subject, and body containing
help

You will then get back some help file, telling you how to subscribe.

New software for the Atari TOS section
--------------------------------------

All files are now in binary format.

New packages are as follows; type "cd ~/micros/atari/tos/<x>/<code>" to get to
where they are held. <code> is as below and <x> is the first letter of <code>.
EG. For package "m100" you'd "cd ~/micros/atari/tos/m/m100".

Pfx Date Key Details
--- ---- --- -------
n106 29/04/94 ---- DESKMORF 1.0 3D look to your ST desktop. DEMO, lasts 10 mins
n107 03/05/94 S--- GEMAR 2.20 A SCSI Tape Back Up Program
n085 03/05/94 ---- GZIP 1.2.4 GNU file compression utility

From: pagan@meiko.co.uk
Message-ID: <2qtpno$lud@bart.meiko.com>
Source record: 187218
Cross-posted to: comp.sys.atari.st,comp.sys.mac.misc

Hi,

I am having some hassles trying to un-.hqx files that I have ftped
from umich/info-mac. I am using compactor-pro (1.3 I think) and
it is telling me that things must be corrupted or of a higher
version of binhex than it can handle.

It's all a bit chicken and egg really as all the things that I
need to unhex seem to be hexed (I have a copy of binhex4.bin but am
stuck at work with not a ResEdit to be seen so I can't change it to
an app, yet...I will try at home but thought I would try this
post to see if there was anyone with a mind to help).

My 'mac' is a Spectre box on a 4Mb ST, BTW, so any help from another
Spectre owner would be greatly appreaciated.

Thanx.

y> support LAN on a Falcon as it seems.

Get the SerialFix CPX module, when you remap the Lan-port, it's possible to use
it under Connect.

I use it on my Falcon because i use the lan-port like a 3-wire serial port
between my ST and PC and i don't have to swap cables :-)

Greetings,
Koos

> 486 66 MHz processor, correct me if I'm wrong, but I think it was 26 MIPS,
> the DX 66 is less. It is way over 3 times the speed of the TT030.

The Medusa T-040 can be equipped with 68060 - and then we'll speak about a power of about 100 MIPS... That should be enough for most of us ;-) ? Medusa T-060 is, b.t.w, already near completion.

One can't compare T-040 directly with Atari TT-030; T-040:s buses and the overall architecture is much faster. As an example: the standard hard-disk installed in the cheapest (?) model is capable of moving 4 MB/s - if the brochures didn't lie...

Most important, I think, was this: in real, hard work, T-040 seemed to be from another planet compared with TT-030..! The difference was hard to believe - but it was VERY convincing... ;-) ! The machine is very expensive, I admit, but the overall "feel" of speed was well comparable to a Pentium PC.

It's good to know that such machines exist. It'll be interesting to see, what the next Atari-clone "GE-Soft EAGLE" will be like.. It's cheaper - still much faster than TT-030, they say.. Let's see.

> > I don't understand what uucp is.
>
> I *think* it stands for: UNIX to UNIX Communications Protocol, whatever that means.

It is a venerable (read: old) and still quite widely used method for transferring data between UNIX (suprise!) machines. It is usually used over dial-up lines. Suppose remote machine 'lonely' has no network connection, but has a modem and dial-up access. Also there's a machine called 'cables' that has network connections coming out of it's ears. 'Lonely' could use 'cables' to send and receive email by using uucp.

For example, if you wanted to copy the file "mint.zoo" (what else:-) from lonely to cables. On lonely you'd type:

```
prompt% uucp mint.zoo cables\!~/mint.zoo
```

Periodically, a program runs on cables called 'uucico'. What this does is see what files have to be copied, then dials up the remote machine, logs in as "uucp" and sends them. You'd end up with a file called mint.zoo in the directory /usr/spool/uucppublic on cables.

Uucp's main advantage is that you don't pay for a permanent connection, files are only transferred when uucico is called.

Uucp used to be used for virtually all mail transfers, using what are called "bang paths" - some old-timers (:-) still have them in their sigs. To send email, you'd have to specify an exact route from your machine to the destination machine, separated by bangs (!'s). To get an idea of what a bang path sort-of looked like, look at the Path: header of any news article.

Cheers,
Rob

2707. Re: ST as (X)Terminal?

Newsgroup: comp.sys.atari.st
Date: 1994-05-12 22:58:03 UTC
From: warwick@cs.uq.oz.au
Message-ID: <2quc9r$6ri@uqcspe.cs.uq.oz.au>
Source record: 187199

The old Sun 3/50's here have been converted to run as X-terminals. They
are adequate ... but that is a 68020 running at 32MHz. ie. expect that
a TT or maybe Falcon could be an X-terminal, but not an 8MHz 68000!

X is a large and powerful system with considerable demands on the terminal.
Atari ST's can handle GEM ok, as it is simple, but X11 is very complex.

>

Press Release April 12, 1994

Oregon Research is proud to announce a major upgrade to it's premier
hard disk backup and restore program. Diamond Back 3 began shipping today.
Among the enhancements to Diamond Back are:

* A completely redesigned icon and drop down list driven full windowed
user interface.

* New Visual Directory tree interface for backup and restore path
selection. Easy point and click selection of paths and files.

* Multiple volume removable media(e.g. Syquest, floptical) support

* Support for ANY SCSI tape drive attached to ACSI, TT SCSI, or Falcon
SCSI-2 ports.

* Custom Backup configurations saved with "Human Readable" descriptions
that you can remember rather than cryptic 8 character file names

* Backup Logfiles remember EVERYTHING for you. All your backup options
and where the files came from. To restore just load a log file and go!

* Multi-Tasking background backups with any version of TOS. Use any
event driven ACC while you backup!

* Many more enhancements

Diamond Back 3 retails for $69.95 and is available now. Upgrades from
previous versions of Diamond Back are $29 + $4 S&H from now until
July 31, 1994 and $34 + $4 S&H thereafter. If you have not sent in your
registration card then you will need to send you original disk(or a xerox
copy of your original disk) with your upgrade order.

For more information contact us below or download the Diamond Back 3 demo.

>Thanks for the info, Scott. I had heard of Falcon Speed but I wasn't aware that
>it was available for sale yet. Have there been any reviews about this product?
>A 286 clocked at 16MHz still seems pretty slow but the price is right.

I have thought about the same thing, but due to Uni constraints, I must buy a
486 sx at least. Now has Compo done that yet!? I was told it is finished,
just not released.

As for the 286, it runs reasonably fast (sorry no benchmarks with me), but I
have seen it running windows at 800*600*256 at a reasonable pace (for windows
;^)) not bad considering windoze is really only for 386 and above ...

Regards,

Karl.

The latest version is 3.0. 3.1, a software upgrade, is supposed to come
out real soon now. I don't know what it does about flow control, but
it will drive the serial port however fast a Mac + drives the serial
port (19,200 baud, I think). I would imagine there exists mac software
to up the serial rate.

>Brian

From the DB3 manual:
Extra Special Features:
* Support for most SCSI Tape Drives including DAT drives

so it looks like it should be able to handle it. Post orres@teleport.com
for confirmation on your particular drive. Wayne

PS- DB3 has an amazing list of features to meet almost everyone's needs
in backup capabilities from the 260ST to the Falcon (including TT) - and
a good manual comes with it.

Do you have access to a Sun workstation? I use mcvert on the Sun to convert
everything to Macbinaries as I grab stuff. This saves a lot of download
time. Hope that helps.

> whether or not (and possibly when) the thing was actually posted?

I have not called in awhile, but I do remember that there are certain days of
the week and times of the day when the Atari folks are in. They should be
told to you by the phone robot. I don't know what they are offhand, though.
Perhaps someone else can post these for you.

> Trevor "why aren't there any uses for a dead Miniscribe?" Ingham.

They made an artificial reef with dead hard drives in south Florida somewhere.
Also, rumor has it that dead drives "go really good" when spun up with a car
battery and hit by a 12 gauge shotgun slug from about 50 yards away....

> How can I partition the Syqquest and let the computer know that these
> are new drives?? The manual (Toad computers) does not help at all.

I infer from the above that you do not have an ICD host adaptor? If so,
I suggest you either get one (which will come with ICD software), or buy
the Pro level ICD stuff (which will work with just about any host adaptor).
The Supra software is very old, and the ICD stuff is excellent. I have no
idea if the Supra stuff will recognize a media change on the Syquest. Also,
if you can get a copy of the non-Pro level ICD software, it should work on
your system, but will not allow caching. You can use a separate cache program
(though I think you will probably be convinced to by the ICD stuff so you can
use theirs, as it is very good). This is the version that is distributed
from their BBS, Genie, Compuserve, etc.

With my setup, I format a cartridge with the partition sizes I want using
the ICD format program, then use Spectre to properly prepare the Mac
partitions. I seem to remember that you have to have any ST partitions
ahead of the Mac ones after you are done. I usually have an ~4mb ST partition
and a ~40mb Mac partition per Spectre cartridge (for silly reasons, which I
intend to fix soon!).

Hope that helps.

2721. HELP! Upgrade my 1040 so I can use Notator

Newsgroup: comp.sys.atari.st
Date: 1994-05-13 04:40:35 UTC
From: mcwilliams@wmich.edu
Message-ID: <1994May13.004035.18047@wmichgw>
Source record: 187239

I just recieved Emagic's Notator Logic and found that I need to upgrade my 1040stf. It has TOS 1.0 and 1 meg of RAM.

1) Where do I get an upgrade for TOS? How much will it cost? How long will I wait to get it? Can I install it myself?

2) What type of SIMMS do I use to upgrade the memory to 2 megs at least? Can I install this myself?

3) Would it be cheaper to buy a used ST? What will work with Notator Logic?

Thanks in advance for any advice.

Brian Mc

From: ath@cscns.com
Message-ID: <CpqAKF.4qs@cscns.com>
Source record: 187247

Hi there,

I had a crazy idea; I have an old atari 520ST without a harddrive. I also hav
a 486 w/250 mg harddrive. Is there any way to network the atari to the ibm
for purpose of file storage? I have a fast modem on ibm, and would like to
use that for all internet downloading(Atari files as well).

If anyone has any comments about hardware and software requirements/costs,
please let me know.

I am setting up the Atari for my kids, and would like them to be able to
access files easily(without having to mess with the floppies).

Thanks,

Matthew.

This is a known problem, which has been fixed in Masterbrowse v4.4

You may grab this new file from mic2.hensa.ac.uk under the path:

micros/atari/tos/n/n114/mb44_bin.lzh

and it's description file, under the same directory n114.msg

Please remember that I 'try' and support all the software on-line at
hensa, as I test the software as much as possible.

Or you may grab it from a.a.u.e....can be found under Newitems.
Filename: mb44_bin.lzh

It's a pity that the Maus people didn't coordinate their efforts with
the official coordinator as they started working on linux. This way
the development is only slowed down. The internet version already
runs quite stable on the TT, i have already compiled and running GNU
emacs, for example. It is at least as stable as the Amiga Linux.

I think that files on umich are UNIX compressed (extension gZ), so you have
to do an uncompress on a UNIX box first.

The only way to succeed at contracts is either to destroy them with
lasers or by crashing into them. Anything else, including missiles,
them crashing into the ground/space stations/other ships, does not
count.

Hi!

I tried the demo from STF's Cover Disk on my MSTE with TOS 2.05, but when a
level is completed or all men are dead it could happen that the music plays
on and the game hangs up. Then I have to push the reset button to start it new.
I'd like to buy the game, but I think it's too unIstable at the moment.
Is there a newer version which will run without hanging up?
What are your experiences on a MSTE with TOS 2.05?

Please send me a PM.

Andreas

2736. Problems with Fujitsu SCSI harddisk

Newsgroup: comp.sys.atari.st
Date: 1994-05-13 11:31:33 UTC
From: rs@tweety.informatik.uni-dortmund.de
Message-ID: <2qvoel$aib@fbi-news.informatik.uni-dortmund.de>

Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hello everybody!
Yesterday I killed the rootsector of my 2614ESA Fujitsu SCSI harddisk,
which is connected by an ICD
AdSCSI to my st. When I try to restore it with Cleanup, I get the message:
SCSI Error $31. Is there
any chance to get back the format of the disk? There is _REALLY_
IMPORTANT data on it.... :-(((((

Roland.

HiSoft distributed previous versions, I suspect they are doing this
one too.

Will DB3 backup and restore Minixfs partitions properly?

HiSoft are distributing this in the UK - it's in their catalogue.

Their phone number is (0525) 718181 I think - you'd better check it in an ST Mag first....

2739. Spice

Newsgroup: comp.sys.atari.st
Date: 1994-05-13 13:34:18 UTC
From: sean_c@sn3001.oldham.gpsemi.com
Message-ID: <Cpqtp7.IDu@lincoln.gpsemi.com>
Source record: 187152

Does anybody know the most recent version of the Spice circuit simulator
available for the ST ? I have a copy of ver 2G6 but this is getting a
little long in the tooth now. I am running a 1040 STFM with 170 MB HD.
I think that ver3 sources are in the public domain now (?) but I can't
find either these or the binaries in any of the usual places.
Any help would be greatly appreciated.

Cheers.

Sean.

2740. English prompts in WinRec?

Newsgroup: comp.sys.atari.st
Date: 1994-05-13 13:36:11 UTC
From: nj1@ukc.ac.uk
Message-ID: <7865@merlin.ukc.ac.uk>
Source record: 187160

Has anybody worked out how to get the English prompts in WinRec 1.37???

I know I need to use the AKP files, but all I can glean from the documents
is that I need to install a cookie to set it to read the correct AKP file.
How on earth do I install a cookie?!?!?

Any help would be appreciated,

Neil.

mcwilliams@wmich.edu writes:

>I just recieved Emagic's Notator Logic and found that I need to upgrade my
>1040stf. It has TOS 1.0 and 1 meg of RAM.

>1) Where do I get an upgrade for TOS? How much will it cost? How long will
>I wait to get it? Can I install it myself?

Worthwhile TOS upgrades are TOS 1.4 or TOS 2.06. Cost will vary depending on
the country - I am in England and 2.06 costs 60 UKP.

Installation is a tricky process and best done by the dealer.

>2) What type of SIMMS do I use to upgrade the memory to 2 megs at least? Can
>I install this myself?

Your ST is an STF and they don't use SIMMS. Most upgrades solder directly onto
the mother board. You can get some upgrades that, once in place, take SIMMS.
Your best be is to contact an Atari dealer.

>3) Would it be cheaper to buy a used ST? What will work with Notator Logic?

Possibly - a 2meg STE can be had relatively cheaper these days. Yes, Logic will
work fine. I have it running on a 4meg STE.

>Thanks in advance for any advice.

No worries! And come and join the Logic mailing list if you haven't done so
already. We're a nice bunch!

Sen mail to majordomo@mcc.ac.uk with the body text of
subscribe logic-users.

Then to send mail to the list, send it to logic-users@mcc.ac.uk

See you there!

Try Stuffit Expander (freeware), which allows you to drag and drop, and
then de-hqxs and unsits/uncpts the file.

Hope this helps,

When you download an .hqx file, be sure that you download it as TEXT, not as a binary. I don't know about the Atari, but for the Mac this certainly makes a difference.

If you use a missile on your Hit target he will escape in
the ejection pod (or whatever it is called). The only way to be
sure with missiles is to use an energy bomb after you nail him. This
also has the added advantage of getting the hoards of police off
your tail. I have taken a couple of contracts where the target
never showed! Always keep a save game of before you take the contract!
One way to get around the distance needed to get to some
hits is use a viper with class3 mil. drive to get there and then
buy something suitable for the job at hand!

2760. Atari 520ST FOR SALE

Newsgroup: comp.sys.atari.st
Date: 1994-05-14 01:29:54 UTC
From: noah@cats.ucsc.edu
Message-ID: <2r19ii$bjd@darkstar.UCSC.EDU>
Source record: 187174
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

I'm selling this system for someone who does not have net access.
I can't answer too many question about it except that it
looked pretty clean and it does work... I see this guy about
once a week so if it's an important question then give me a
few days to get back to you.

So,

F O R S A L E

Atari 520ST

system contains:

520ST
SF-314 3.5 inch drive
"Air" 3.5 inch drive
floppy drive (I'm guessing 5.25 inch)
mouse
SC1224 Color Monitor

Software:
LDW Spreadsheet: Lotus123 clone
publishing parter:professional
dozens of games
word processing program
Paint programs
Language and Utilities Programs

Books:
Atari Internals
GEM programmer reference
ST Machine Language
ST Tricks and Tips
Graphics and Sound
ST LOGO user's guide
ST Peeks and Pokes
ST BASIC training guide
ST BASIC to C
2 Joy sticks

plus an extra special swivel stand for the monitor.
no mention of what makes it special, but it won't
cost you extra.

Email me if you are interested. Highest offer takes it all away. You pay shipping, so take that into account. I bet the monitor and books weigh a lot. I'm willing to break up the package if you just want the 520ST and no monitor or books.

Noah Spurrier

It seems to support all tape streamers with no problems....it won't work on a falcon though....gives 3 bombs.

running on a 4 meh 16Mhz STE with a video 8 tape streamer...I get 5 megs a minute...but using Gemar 2.20 I get 8.5 megs a minute...not sure which one I prefare yet.

2765. Re: GEMulator

Newsgroup: comp.sys.atari.st
Date: 1994-05-14 05:18:52 UTC
From: Graham.Irvine@mettav.royle.org
Message-ID: <768891626.2@mettav.royle>
Source record: 187182

It was none other than David Stevenson that wrote on 9 May 94 that ,
DS> Incidentally, ST Review's review of the GEMulator was particularly
DS> poor. It went something like 'my PC blew up, so it must be
DS> GEMulator's fault, so it must be crap'. Not really up to the
DS> standard I normally expect from the good-and-getting-better (and
DS> independent) ST Review.

Getting better I agree ,but I wish to add that last month's " let's have a go at STF " was also a bit childish and disappointing . I buy all 3 UK Mag's (and STA),because I think there is room for all and whilst I may (or indeed may not) agree with what the editorial line was I don't think it was either neccessary or relevant to take up space with what is to all intent's was a bit of publishers tit for tat.

I know where STF's fault's lie and IMO verdicts about its merits should be left to the reader's and to what type of magazine they wish to read.

The Coment's in STR came across as just plain sour grapes at Format's higher sales I'm afraid ,higher sales because they appeal to a certain audience but then we Atari dedicated must surely be the last to fall
sucker to the ' more popular is best' line of thought !

ICD purports that their software will run on any host adaptor (the PRO
Utils...) but my experience isn't quite so reassuring. I've tried no
less than 4 different Supra hard drives and found that SO LONG AS YOU
DON'T TURN ON WRITE VERIFY things seem to work OK. Invariably, the
HDUTIL program will lockup the computer when trying to save the boot
config info if write verify is turned on. Apparently the software is
waiting for some response from the Supra host adapter that just isn't
forthcoming. This happened with version 6.2.4, 6.4.3 and 6.5.0

From: cs93dlh@dcs.exeter.ac.uk
Message-ID: <1994May14.104451.6574@cen.ex.ac.uk>
Source record: 187101

I have been offered a 340Mb Maxtor scsi HD at a very reasonable
price.

In order to attach this beasty to my Falcon I require the following items:

HD case
Power Supply
SCSI II cable

If anyone can point me to the cheapest place in the UK to get these items,
or has them for sale 2nd hand I would be very grateful.

Also, would I need a cooling fan in the case in the above set up?
Thanx,

Ok, here goes. A friend of mine (who does not know how to post news)
has the following for sale. If you are interested, then please reply
to

Gordon :
sinigord@cix.compulink.co.uk

1 Atari Falcon Computer (14Mb)
1 Phillips CM8833 monitor
1 528Mb SCSI II Hard Disk (complete with lots of crap on it !)
Joystick, Cables, Box, Instructions, etc....

He also has a 4Mb 65Mb Falcon too. He will deliver to most places
in Scotland and the North of England.

If you are interested, please contact him at the above address,
quoting this article (so he knows what its about !)

Dave.

Yes, that's no problem. Run NET s/w on both machines and do a TPUT *.* from
the root or whatever directory structure you want to backup.

I would recommend PE1CHL's NET (I can supply this for both PC and the ST)
but there are others (which I can also supply) for both).

Assuming you're using DIS.EXE on the PC, you can add a SLIP connection to
it on another port, which NET on the Atari will happily talk to at 19k2
(with a 16550 in the PC).

I run 3 machines here (plus others remotely) all networked with this s/w
(mostly over radio links) and it's bombproof....

Mail me if you want more details or s/w.

Cheers, Martin.

Could be Commodore investors who didn't want to sink some cash into the
black hole of Intel-based clones or the shiny juggernaut of Apple; ie,
they wanted to keep their investment money on something different (but
still fairly cheap).

Less than that I think! I seem to recall hearing 64k of RAM, and some
tiny amount of disk storage (like 9" floppies); supported four
concurrent users on that tiny machine.

64k isn't enough to boot MiNT, let alone do any work!

>card's for the contemptibles .

>Graham Irvine

I don't think you have to worry about that any time soon. The deal was just announced so it's probably going to be at least 6months if not longer before you see the signum cards shipping. Also the signum cards won't handle cartridges (unless I've been sorryfully misinformed). The next question will be how good of a motherboard you will need to get real performance out of the card. Also what will the cost be? If it is the same price as a normal Jag where's the incentive to purchase one unless you already have a really nice 486 sitting around your house.

Don't get me wrong. I think they will sell alot of them and it was a damn smart move. I just don't think that they will be a factor in the purchase of a Jaguar until probably 4th quarter 94 at best.

>they can be backed up and restored via the Raw Image backup option.

Bob just a note to say well done for the work put into DB3, the front end is superb, and I've now saved a hell of a lot of disks with the 1.6mb floppy option.

You have one very happy UK customer here. Love the new front end.

Gee, and here I was thinking that the 520ST was a sixteen bit computer.

2788. PCHROME & AdSpeedSTE incompatibility

Newsgroup: comp.sys.atari.st
Date: 1994-05-14 17:02:34 UTC
From: dunham@src.honeywell.com
Message-ID: <2r307a$dii@moon.src.honeywell.com>
Source record: 187109

I have added an AdSpeedSTE 16 MHz accelerator to my 1040STE, but when running in "true" 8MHz compatibilty mode, PCHROME3 or PCHROME4 no longer work -- there's obviously a timing error, and lot's of varying diagonal gibberish. This is true for "Photochrome" mode (19,000 colors) all the way down to the "STE 49/512" mode (512 colors). However, UNISPEC (Spectrum) does work as promised. DSLIDE reveals that all 512 color Spectrums are OK, but that any 4096 color Spectrums also suffer from timing weirdness.

Any insights about why the AdSpeedSTE accelerator fails to handle the timing required in PCHROME, even in it's lowest 512 color mode? I don't appear to have a problem with any other programs at 8 MHz...

Tell me more about wormholes and photographic missions. I haven't played
much recently because I had gotten bored with the usual lot and couldn't find a
feaseable way to turn a profit off of exploring.

Sounds like there is alot that I've yet to encounter :)

Straight Fax is definately the way to go. Very impressive product, the ability it gives your Atari with Fax Modem is truley impressive. Many of my Mac friends drool over it's ease of use. (also note they are all too cheap to purchase anything for their macs) It made the c.s.a.st. Top 10 list last year, so I heartily recommend it to anyone that has the need to send/recieve faxes from their atari.

Message-ID: <2r386eINN82@no-names.nerdc.ufl.edu>
Source record: 187115

Hi All:
I have just been donated an old 1024stf, I had thought that i'd
merge it with my PC based MIDI setup. But I dont know anything about
the hardware details of the Atari. Is there an FAQ on some site that
will explain the Atari hardware? I want to know if I can use any
of my PC floppy drives or harddisks, can I upgrade the memory, etc.
Any info will be greatly appreciated.
Thanks,
Mike

Hmm, this is getting to be a FAQ...

The _only_ option you currently have for C++ is GNU C/C++; it's also got
a very high-quality C compiler. Needs at least 4M of RAM for C++ coding
though... Look on atari.archive.umich.edu in /atari/Gnustuff/Tos.

>
> I don't understand what uucp is.

UUCP (Unix to Unix CoPy) is a method of getting news/email/files between computers via serial lines (usually, anyway). That's how I get my news/email here at semprini; my ST (semprini) calls up another computer (tdkcs.waterloo.on.ca) and uploads all of the email/news that I've posted... it then downloads all of the email/news that is waiting for my machine. Eventually, everything filters up to the "live" Internet, which is why you can read my articles... ;-)

While you're on the subject of SyQuest drives etc., does anyone know if there's a driver for MSDOS PC's to read a SyQuest cart (44MB in particular) formatted with ICD's utils on an Atari?

Under Spectre, the ST could directly format, access, use, etc. Mac cartridges, and since DOS and GEM have the same floppy format I'd hoped it would be simple plug and play, but no such luck.

I need to know as I've just (insert your choice: upgraded/downgraded/side stepped) from my Mega 4 to a '486, and kept the SyQuest I was using. There's a fair amount of stuff I'd like to port over, but alas, I can format the carts but not read the old format.

Also, anyone know why the SyQuest seems to be v-e-r-y---s-l-o-w on the PC? I've got it hanging off the back of a SoundBlaster SCSCI II card, and am accessing via Adaptec's ASPIDISK.SYS driver that came with the board. Much thanks in advance.

2807. UPLOAD: CKBD deluxe 1.3, keyboard driver for special characters

Newsgroup: comp.sys.atari.st
Date: 1994-05-15 14:53:28 UTC
From: chris@buran.fb10.tu-berlin.de
Message-ID: <2r5d18$ls0@brachio.zrz.TU-Berlin.DE>
Source record: 187133

Hi everybody!

I just uploaded the freeware program CKBD Deluxe 1.3 for the
author Pascal Fellerich, the ultimate extension for the keyboard
driver in TOS computers. It is an AUTO folder program that runs on
any TOS/MultiTOS/Mag!X, with a CPX for configuration.
Access any special characters on any keyboard using 5 different
methods: Compose, Deadkey, Extkey, ALT-nnn, Keyboard remapping.
PLUS: new flexible reconfigurable mouse speeder. English, German
and French doc's enclosed!

Look for CKBD_13.* under utilities in the following anonymous ftp
sites:

atari.archive.umich.edu
(mirrored at wuarchive.wustl.edu in /systems/atari/umich.edu
src.doc.ic.ac.uk in /computing/systems/mac
and archie.au in /micros/mac/umich.)
ftp.cs.tu-berlin.de
ftp.uni-kl.de
archive.cs.ruu.nl
ftp.cnam.fr

By kind permission of the Pascal Fellerich CKBD Deluxe 1.3 will
also be part of papyrus/papyrus GOLD updates and new versions
since 3.5.

Greetings. Minixfs pl10 has just been sent to atari.archive and
ftp.uni-muenster.de . Quiet a lot has been changed. The docs have been
rewritten (well patching stuff onto 0.55 docs wasn't working anymore).
The filesystem format has changed (slightly) see the docs on what to
do.
The Falcon/TT+Multitos problem has been cured! Now the bad news,
the patch only works with MiNT 1.10 and the addroottimeout patch of net-030.
1.10 isn't publically available though if/when 1.11 appears it should have
the net-030 patch as standard.
Please don't mail me saying you can't find Minixfs, it may take a
day or two to be moved to a publicly readable place.
Bug reports welcome (email not usenet) but read the file bugs.doc
before you submit a report.
Donations also welcome of course ...
Have fun, Steve.

2813. RIP/ST

>Well PCHROME 4 did this on my MSTE at 16Mhz with cache. I had to turn
>*everything* off including the cache - and boot from a floppy before i
>wanted to know.

The problem with some accelerator card (like the Hypercache I had on
my old MEGA ST) is that there is no way to set them to 8 Mhz, the
"slow mode" is 16 Mhz too, but with the cache off (almost 8 Mhz :-)

On the MEGA STE however you CAN set it to 8 Mhz too (16 Mhz without
cache is not faster, but 8 Mhz without cache is compatible....)

A question: I have an original Spectrum 512, but it crashes on my MEGA
STE (the picture is OK, but when I click on some functions - pooof !!!)

2815. Neodesk 3.01 > 3.02 > 3.03 Help

Newsgroup: comp.sys.atari.st
Date: 1994-05-15 18:06:59 UTC
From: cb170@city.ac.uk
Message-ID: <cb170.769025219@Paddington>
Source record: 187142

I have Neodesk 3.01, and recently found the neop302a patch upgrade from
3.02 to 3.03.

But does anyone know where I can get the 3.01 to 3.02 version of the patch?
(Internet, not Genie or anything)

Thanks,

Message-ID: <1994May15.185630.2994@bay.cc.kcl.ac.uk>
Source record: 187143

Hi there,

Has anyone got an Atari fuji symbol definition for POVray ? I'd
create one myself, but the manual warns "practically impossible
to generate by hand" about the smooth_triangle class, which is what I
think I'd need.

POv really is rather nice on an Alpha :-) The basicvue scene takes a
whole 3.5 secs to render :-)))

The idea is to have some sort of representative cover for the CD
jewel box - now that I can archive a.a.u.e to CD :-)

ATB,
Simon.

Hello,

I was recently offered some CD-rom readers that I'd like to
install to my TT030 and the seller insisted thet the drive would require
a driver/interface_? that would support syncronous CD-rom transfer.

-is there a certain standard for that kind of thing ?
-does TT's built in scsi port support the standard ?
-is there an existing product called a driver for such thing ?
(no vapor-ware?)

-anybody done it yet ?
-anything else I should know ?

This doesn't seem to be the case, I attacked my target with lasers for a bit
(26% left I think) and then he got in a lucky shot (damaged my engines!)

The *only* thing I could do (he was running, and at over 7km), was fire
my smart missiles at him. I clicked on the 2X speed, and BOOM!
target lost.

I looked on my contract sheet and it said "done".

But I did use lasers at some point to damage him, perhaps thats the key?
using *just* missiles doesn't work??

>1. Has anyone installed Minix on a Falcon 030!?

I suspect it will need some hacking to run on a Falcon.

>2. Does it work ;^)

Sorry - haven't tried it.

>3. Is Minix PD/Shareware/Whatwear!?

Its commercial. Sold by Prentice Hill initially, but other comapanies have been known to produce major updates as PH lost interest. I think PH still own it, but not entirely sure.

>4. What is the latest version!?

1.5?, 1.6? ish

>5. Approx size of Minix!?

The kernel is < 200K ISTR. In order to do anything sensible on it you really need at least 4MB. It also needs its own partitions. You really need about 20Mb to do C development work. Note: this partitions *can* be the same as the MINIX partitions MiNT can access.

>6. Is it Unix compliant, or just very close (i.e. re-compile of sources!?)

Its Version 7 (cica 1977). Its fairly easy to get some older UNIX software working, although you need GCC as the C compiler supplied is not up to it.

OTOH IMHO its easier to get UNIX stuff to compile under MiNT with GCC as the libraries are much more complete. At least I've had more luck this way.

:-)

Roland.

Any numbers for the Jaguar?

BTW, ACEC demoed the Jaguar at a local computer show. Everybody spent a few
minutes watching kids play Tempest 2000, CyberMorph and Trevor McFur. Then
they spent the next 20 minutes watching the Falcon030 we had set up.

Tres' interesting. They all were impressed with the Falcon, even more so
than the Jag, yet none were interested in buying....

But that's half the fun! (the other half is restoring) ;-)

Seriously, one way to go is to hook the two systems up with a
null modem arrangement (easiest way: hook a RS232 cord to each system, and
put a "null modem" (which you can get at Radio shack, etc) between them).
Then load up a terminal program on each side, make sure the settings
are the same, i.e. 19200 baud, etc (possibly load in a RTS/CTS fix on the
Atari) and start a Zmodem transfer. Assuming you have all source files in
one directory and are sending them all to one directory, that is...
(and just sit back and count the bytes :-)

I believe newer versions of the ICDFMT program will produce PC readable
cartridges. I can read PC formatted carts on my ST as well, so you could
always format them on the PC.

> Under Spectre, the ST could directly format, access, use, etc. Mac
> cartridges, and since DOS and GEM have the same floppy format I'd hoped

I some of the older PC SCSI interface cards are pretty retched, though newer
cards are nice. I have a friend who uses Syquests on his PC, and it is
quite fast. Thus, it is probably your card.

2835. Master Tracks Pro 3.6 for sale or trade.

Newsgroup: comp.sys.atari.st
Date: 1994-05-16 04:22:04 UTC
From: atariman@aol.com
Message-ID: <2r6sdc$h9k@search01.news.aol.com>
Source record: 187084

I have version 3.6 of Master Tracks Pro for the Atari ST. Works on TOS 1.0, 1.2, 1.4, & 1.6.
A great sequencer. Maybe Passport will someday revive its support for Atari. Nevertheless, I have an Extra original for sale or trade. Would take $100 for it and I will throw in Band In A Box version 4 along with it! Will also trade for another high-end sequencer such as Cubase (I have Cubase Lite), you know what I mean. The Atari is by far the nicest MIDI computer to work with. No fans, just a nice quiet studio computer, and it all works with just 1 meg (no 520's). Let me know what you think.
Send your response to: T Hendershot, 4835 Crosley Ave, Duluth, MN 55804.

2836. Atari ST Stuff for sale

Here is some hardware I have for sale. All in excellent shape.

1 - 520ST with double sided drive.

1 - SC1224 color monitor with the controls in front

If interested, send netmail. $200 obo. Also willing to sell components individually.

Mike Guidry

Is there any way to use a QIC-80 tape on an STe?
I really want a tape backup but can't afford a SCSI tape.
Mabee an interface/software combination could be developed
that uses ther cheap DOS tape units. Why not use the second
floppy port and software or an iterface to serial or SCSI
and software??

If this is not possible, WHY????

Hi,

>There were a couple of WWW pages posted a couple of weeks ago that were
>Atari-oriented; one was a hypertext version of the Atari FTP site list,
>for example...

My WWW home page has links to all of the Atari related sites that I know
of, including:

1.) My own Ghostscript information (including outdated screen clips),
2.) Notator Logic info (with screen shots),
3.) The canonical ftp site list,
4.) The Hensa micros software archive,
5.) Some info about the MiNT init package.

The URL to my home page is

http://godel.ph.utexas.edu/Members/timg/welcome.html

or you can get to me through the Center for Relativity page:

2842. International Payment Options

Newsgroup: comp.sys.atari.st
Date: 1994-05-16 06:39:25 UTC
From: jbeeghly@u.washington.edu
Message-ID: <2r74et$1m9@news.u.washington.edu>
Source record: 187282

There has been some messages going around inquiring about how to go about paying for share ware fees in other countries. Several people suggested placing the bills into the envelope (between two post cards so the currency doesn't show) and mailing the cash. For me, this method is impractical due to several reasons.

One: If the money gets lost in the mail (for whatever reason), there's going to be hurt feelings and distrust. The author (probably) will not send the registration code, because he never receives the payment.

Two: The user on the other hand has already shelled out $10 - $20 dollars (or whatever), and will probably will not be willing to send the money again.

Well, I too need to know more about this subject, so I decided to visit my local bank.

Let's suppose Mr. X lives in Germany and wishes to register his copy of WordCrunch, a really spiffy word processor that puts Microsoft's Word to shame (which isn't that hard... {please - no flames}).

To register, Mr. X needs to get $100 US dollars to Mr. Z, the author of WordCrunch. Here are the various methods that I have looked into:

Check
This works great if your in the US, but apparently the usage of checks isn't as common abroad as it is here in the US, so Mr. X would not be able to send Mr. Z a check for $100..

International Money Order
This seems to be the best way to do an international transfer.
If the amount is under $1000, then the fee would be $10, otherwise the fee would be $15. So Mr. X would go to his bank and pay $110 for a $100 money order. Also, make certain than Mr. X exchanges the amount into US dollars BEFORE the money order is sent, otherwise it will arrive in D. Marks, and Mr. Z will have to have the currency exchanged to US dollars (which will cost a fee). BTW: $10 is what my banker told me it would cost to send from here to there, and he believes that it would cost the same to transfer from there to here.
Although this method is fairly inexpensive, it does have some drawbacks. 1) After the IMO has been drafted for person's name (or a company), the transfer still needs to be sent... air mail is pretty expensive, and ground/sea takes a long time (perhaps 4 ~ 5 weeks). 2) If something goes wrong (like the letter was lost), the IMO won't be cashed (because it's made out to a specific individual), but it is up to Mr. X to cancel the IMO and send a new one, and Mr. Z will not be able to do anything about it.

American express
This method is pretty expensive, but fairly safe as well. It costs $25 to transfer funds from the US to an international country, but it costs $35 to send from an international country to the US (go figure...). However, AE is very common in Europe (so I'm told), and if anything goes wrong, AE will remedy the situation (by re-embursing).

Wire
This method is very expensive, but fast. The cost would be (according to my banker) $20 for Mr. X to send the wire on his end, and $12 for Mr. Z to receive the wire. However, the money will arrive within a day or two and there will be a very minimal risk (since the order is transferred over the phone line and not the mail system, no one could grab the $$$). Also, in order to send the wire, the sender needs to send the transfer to a specific bank account. I don't know about you but broadcasting my bank account does not sound too smart.

VISA
This method is inexpensive (to Mr. X) and the risk is very minimal (if you give your visa number over the phone... otherwise, if you send the numbers over the mail, you stand the risk of someone intercepting the numbers and IMHO and your risk goes up). Although the cost is small for Mr. X to perform a transaction with VISA, it costs a lot of money for Mr. Z to obtain and operate a VISA. For example, my banker said that their branch charges at least $25 a month to keep/operate (which is a lot if you only get an order every month or two), and there are other costs (like start up frees, etc...).

I'd appreciate it if someone in another country would respond to this and tell us what it would cost on their end (e.g would it really cost $10 to do a IMO), and comment on how much of a hassle each system would be.

>Could someone tell me exactly WHAT MacMiNT will do ???
>
>Could I use a Mac to run Atari software ?

Yes, but only TOS programs, ie. those which don't use ANY GEM VDI, AES or
LineA instructions and don't go straight for the hardware.

Things such as GCC, jove and many other ported Unix software will run.

>Or is MacMiNT just a pre-emptive multitasker for a Mac ??

Yes, just as it is for the Atari.

>Who wrote MacMiNT - Eric Smith ???

Yes, most of it.. a Mac fan wrote a minimalist TOS emulation underneath so
as to implement the TOS calls MiNT didn't provide. Note: MacMiNT is based
upon MiNT 0.9x as MiNT 1.xx is copyright Atari.

It's copyrighted commercial software published by Prentice-Hall.

>4. What is the latest version!?

I dunno... I doubt it's been upgraded for the last four years, however. (At
least the version you get in a box from Prentice-Hall.)

>5. Approx size of Minix!?

About 14MB in total

>6. Is it Unix compliant, or just very close (i.e. re-compile of sources!?)

It's purely 16bit without ANY support for floating point calculations. These
two scupper many attempts at porting unix software. Well, that and it being
only a reimplementation of Unix Version 7 which means that there are quite a
few system calls and library routines you'll be used to missing.

Well, I've used a Philips microprocessor development box which ran Unix
Version 7 in 256K RAM with a 10MB hard disk running on a 68000 with extra
hardware so as to support process swapping to disk. Old versions of Unix, ie.
those before virtual memory were suprisingly small.

>64k isn't enough to boot MiNT, let alone do any work!

Hmm.. but MiNT has to do a lot of kludging just to work around TOS. It also
can't swap processes out.

No. Minix (latest version is 1.6 I think) does only run on the ST, perhaps
on the TT, too. It's definately not adapted for the FALCON.

> 3. Is Minix PD/Shareware/Whatwear!?

It's Payware. Some Patches are available via ftp.

IMHO, VISA is the very best way to send money abroad. Most people over here have a VISA card, or know someone who has, who will do the transaction for them. The recipient of the money only has to go to a local company who already has VISA facilities, and ask them to accept the VISA transaction on their behalf. The company, I think, loses 1.5% or 2.5% of the value of the VISA transaction. The sender is charged at a slightly inflated exchange rate, but this is usually fair enough.

This was, nobody loses out significantly, and the money is sent in perfect safety. The only trouble is finding a co-operative company. This should not be too hard in my experience.

Well, this is true for 1.5, 1.6.25 has floating point support, and is
much more POSIX like, and that makes it more 'compatible'.

Gerco.

PS: But with a Falcon you should probably wait for the Linux port, some
German's working on, getting 'stable'.

: I didn't really understand how to get the files. Could you please tell
: me how to get eg. LHARC 3.0 from the above list. Please remember i'm
: running UUCP, which means i need to know the exact address and directory.

OK, for Atari, we have two lists....TOS, and MiNT....The programs that
were listed, were TOS programs, as was mentioned at the top of the
list, so when you log into HENSA, you type

cd micros/atari/tos

you then check the Prefix....this is in the form alphabeticletterxxx
wher the letter is either m or (for the moment...more will be added),
and xxx is a number (1 will be 001).. So taking the above example,
lharc 3.01 has a prefix n100, so the exact location is :

n/n100 in the TOS directory. Therefore, from the beginning, you will
type

cd micros/atari/tos/n/n100

the necessary files will be under this n100 sub-directory.

BTW, lharc 3.01 is now on-line, as well as Superboot 8.1

Hope this helps.

Danny.

Wasn't there a special JPEG loader for registrated GEMView
Versions which should be put into the AUTO-folder?
Where can I get it and how much does it cost ?

Alex

: 3.) The canonical ftp site list,
: 4.) The Hensa micros software archive,
: 5.) Some info about the MiNT init package.

: The URL to my home page is

: http://godel.ph.utexas.edu/Members/timg/welcome.html

Tim, thank you for mentioning HENSA micros in your WWW page....I have
accessed your page, and the Ghostscript section, and the ftp-site
section.

At the moment, HENSAs WWW page is at the address mic2.hensa.ac.uk,
which will be changed to micros.hensa.ac.uk, once we've sorted out a
few probs with the new machine.

So, if you would like to use HENSA through WWW, then please type :
http://mic2.hensa.ac.uk

Our WWW server hooks into gopher too, so you are able to do keyword,
pacakge type, and alphabetical searches through the software database.

Oh, and BTW, has anyone been successful accessing sites through
http://student.dhhalden.no/studenter/jonal/Atari/Atari.home.html

I've been to the ftp list here, and clicked on the sites, but just can
not connect. Anyone know why?

Also, the other site which was mentioned can be found at :

http://earth.ox.ac.uk/~steve/mintos.html

All the best to all.

Danny.

2854. Information on SMS2 please

Newsgroup: comp.sys.atari.st
Date: 1994-05-16 12:27:37 UTC
From: D.Corps@herts.ac.uk
Message-ID: <16867-769091245@sirius.herts.ac.uk>
Source record: 187108
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.st

Hi,
I've recently seen the adverts and read the STF article about
SMS2, the new operating-system-on-a-cartridge for Atari machines. I am
damn curious about it, and am also wondering why there haven't been any
articles about it on these newsgroups (of course, my feed might be a bit
slow).
I am very excited at the prospect of a proper multitasking O/S
with a proper windowing environment, and although the STF article and
review answered some questions, I have many more. Some of the most
pressing are below, but I would love to see a full discussion of SMS2.
Perhaps a new newsgroup is in order- comp.sys.atari.sms2?
QUESTIONS

What are the applications bundled with SMS2, if any?
What programming languages exist- LBASIC was mentioned, is there
a version of C in the pipeline?
How configurable is it?
How similar to Unix is the multitasking?
Does it support the standard ST/PC disk format (for floppy and
hard drives)?
PD software was mentioned- how much is there, and where could I
get it?
What is it like to use on a 1mb floppy drive system?
How much does it depend on boot disks and the like?
How can it be compatible with STFMs and STEs?

Duncan.

ObCommodore: C= liquidates... how ironic after all these years of
"competition". I hope the Amiga comes back, but I also hope
Atari & Acorn gain a little more credibility from this.

> cache is not faster, but 8 Mhz without cache is compatible....)

But version 4 claims to set the processor to 16MHz for processing and back to
8MHz for display. It doesn't work. If you run it from 16MHz, the display is
still corrupted and from 8MHz the processing is as slow as ever.

> A question: I have an original Spectrum 512, but it crashes on my MEGA
> STE (the picture is OK, but when I click on some functions - pooof !!!)

Likewise. It became a lot more stable when I disabled Quick ST, so if you have
a software accelerator installed, try disabling it. Even so, it still crashes
sometimes.

Wrong. We just have different cheques than you have, and they're mutually
incompatible. Everybody (even the British these days) has EuroCheques over
here.

>International Money Order
> This seems to be the best way to do an international transfer.
>If the amount is under $1000, then the fee would be $10, otherwise the

>(which will cost a fee). BTW: $10 is what my banker told me it would
>cost to send from here to there, and he believes that it would cost the
>same to transfer from there to here.

Experience in Holland is they charge more (about 25 guilders) for incoming
cheques. And that's just the charges for the ACCEPTING bank. I trust your
10 dollars is what you pay to your banker, so that will be

NLG 25
USD 10
------ +
a lot

> Although this method is fairly inexpensive, it does have some
>drawbacks. 1) After the IMO has been drafted for person's name (or a

I suppose the best way here is to have an AE account in the countries you sell most software to, and then collect a number of orders before you do the transfer.

>Wire
> This method is very expensive, but fast. The cost would be
>(according to my banker) $20 for Mr. X to send the wire on his end, and

>grab the $$$). Also, in order to send the wire, the sender needs to send
>the transfer to a specific bank account. I don't know about you but
>broadcasting my bank account does not sound too smart.

Your account number? Why not? Most companies make at least one account number public.

>I'd appreciate it if someone in another country would respond to this and
>tell us what it would cost on their end (e.g would it really cost $10 to
>do a IMO), and comment on how much of a hassle each system would be.

I'd say it'd cost $25 on the average when the whole trac'e from pocket to pocket is taken into consideration.

A mono STE does not exist.
It is always STEREO :-) Well ok I know what you mean.
The solution is PAULA. An accessory. Protracker 2.0 compatible. 50kHz.
It's optimized more for a TT but works fine on STE too.

Er... you mean you walk into your bank or favorite merchant and say, "Here is
Mr. X's Visa credit card number. Please charge his account $100 and give me
the money." ??? What's wrong with this picture???

I don't know about Europe, but in the US it is not permissable to process
someone else's credit card transaction. The company that does so runs the
risk of losing their merchant credit card account. At least, this is what
I was warned when I got my M/C and Visa merchant account. The bank that
issues the account is liable, to an extent, for any wrongdoings of the
account holder.

What about 'International Reply Coupons' available from any Post Office?

> and software??

> If this is not possible, WHY????

It would surely be possible to use one of the many PC tape units that
connect to the parallel printer port, give that someone would write the
software to do it. This would be a product I would most certainly purchase
or register. Perhaps it could be added to Diamond Back 3 or GEMar. Heck,
even a command line tar-style interface would be fine.

Coming up with a way to use the internal PC tape drives would probably be
much more difficult, requiring hardware and logic (i.e. an interface board),
in addition to software.

SCSI tape drives are not always super expensive. For example, I see an ad
(Spectrum 1-800-959-1030) for guaranteed refurb Wangtek 5150ES QIC-150 drives
for $270, and used deals can be much lower than that on misc.forsale.computers.

The version 2.2 definately supports TT and Falcon. It is not clear from
the CCD (German company) announcement whether it works with MultiTOS,
Mag!X or MiNT. It is not clear either if there is an English version (well,
they won't sell an English version in Germany, I suppose :-).

I just got freeze dried terminal which I love except for one thing...
the letters show up white and the screen is black. This would be ok except
that highlights don't show up and there are times when i need them like
when using lynix. I asked the people at my host computer and they said
they know of no way to reverse the colors.

I'm using an atarti 1040st with a monochrome moniter and vt52 emulation.
I have a unix internet account. I tried the reverse monocrome option on
fzt but that didn't affect the internet stuff only fzt things.

metroman@netcom.com
does anyone know the solution or a good versitile shareware program that's
easy to use? I would prefer to use fzt but will switch if I have to.

I was actually talking about somebody you know very well. e.g. for myself,
I would use my father's VISA merchant account. If not that, then a
shop-owner who you know personally. I do not actually know how widespread
VISA is in the U.S., but in the U.K., at least half of all shops accept VISA.

: It would surely be possible to use one of the many PC tape units that
: connect to the parallel printer port.

I don't believe this is possible. It should be with the Falcon (TT?) but
on ST's & STe's {near-quote}'Some of the vital lines are missed off, which
prevents the user from using the parallel port in bidirectional
applications'.

I think it is possible to make a cartridge-port to bi-dir. parallel port
adaptor, using cheap simple logic IC's, e.g. that in Peter Mayer's archive
(ftp.tuwien.ac.at:/pub/atari-st/tuw-tcp/newadapt.img).

^^

You need at least an Atari ST with 2MB RAM and TOS 1.2 ROMs to run Logic
Atari.

2874. Diamond Back 3

Newsgroup: comp.sys.atari.st
Date: 1994-05-16 17:46:53 UTC
From: cc103@city.ac.uk
Message-ID: <cc103.769110413@Paddington>
Source record: 187252

I am beginning to get a bit bored with all the post about Diamond Back 3,
so here is a list of features taken from the latest HiSoft Catalogue:

Backup Features:
o Extremely fast. In fact, the fastest we know!
o Easy to use 100% windowed GEM user interface with on line help.
o Backup/Restore any number of drive partitions, directory paths,
single directories, or specific files in a single pass.
o Flexible creation of backup sets from different paths or partitions.
o Intuitive and powerful path selection.
o Wild card masks to include or exclude files, which are fully
editable and may be different for each path.
o Incremental backups by date/time or by archive bit (TOS 1.04 onwards).
o Load and Save custom backup configurations for ease of use.
o Flexible disk formatting options, pre-formatted disks do not have
to be of the same type.
o File compression and encryption, disk usage estimation, disk
statistics and assorted disk utilities.
o Backup to floppies or to other partitions.
o Automatic drive switching during all program functions.
o Very flexible Full or Partial restore options, restore original
directory tree or specify new structure.
o Create file listings during the backup, create CRC validation logs
to Hard Disk or floppy files.

Extra Special Features:
o Backup and Restore Spectre GCR(tm) partitions!
o Full support for High Density 1.44Mb floppies, SCSI tape, SyQuest
removable and 21Mb Floptical Drives.
o Intelligent image backup option that only backs up sectors that
contain data.
o Restore partition images to different size partitions.
o Hard disk to hard disk copies 10 times faster than desktop copies.
o State of the Art file compression speed.

Oh dear, following up to my own post. Heres a little memory
jogger, the advert that Furst Ltd. have been putting in the ST press for
the last couple of months.
The advert is (sadly) b/w and 1/4 page, probably they couldn't
afford much more than that. Lets hope SMS2, and Furst Ltd., get the
support they (seem to) deserve.
The text of the advert, excluding the phone number and address
(though I can post them if anyone wants) follows my .sig. And no, I
don't work for them, know them, drink with them, etc. They have simply
developed a product that has caught my interest.

" Duncan P Corps, Student, University Of Hertfordshire "

TRUE MULTITASKING- THE SMS2 OPERATING SYSTEM

the DAWN of a NEW ERA

Furst Limited are pleased to annonuce the launch of a new
operating system for the Atari ST range of computers.
SMS2 turns even the lowliest of STs into a real time system
with workstation capabilities.

SMS2 is an object-oriented, network-ready operating system. It includes
many advanced features such as an intelligent graphics user interface, a
powerful hotkey system, a unique memory sharing system, inter-job
communications (eg. named pipes), re-directable I/O, built-in system
access programs.
SMS2 seems to be unusual in that you simply plug it into the cartridge
port of your ST, switch on and ten seconds later the system is ready for
use. There is no complex installation procedure and yet it is highly
configurable to suit your own particular needs.
SMS2 is supplied on PEROM (Programmable Erasable Read Only Memory) so
that any upgrades to the system software can be recorded onto the PEROMs
enabling your system to be easily updated.

Applications: SMS2 is not GEM or TOS compatible but is a distinct and
separate operating system, which provides a different form of computing.
There are already a number of commercial programs and a good range of PD

software which is available now and is SMS2 compatible.

FURST Limited

SMS2 is ready now for only <GBP>135.00 for the single user version.

2877. For Sale (UK): 105MB Hard Drive for Atari, plus extra 70MB SCSI drive

Newsgroup: comp.sys.atari.st
Date: 1994-05-16 19:30:51 UTC
From: djs@jet.uk
Message-ID: <1994May16.193051.22130@jet.uk>
Source record: 187259
Cross-posted to: comp.sys.atari.st,uk.misc,uk.forsale

Due to upgrade to Falcon and larger SCSI disk, I have the following
available (for Atari ST range):

105MB Hard drive, in Third Coast Technologies case with internal power
supply and ICD adSCSI+ host adaptor. There is space in the case for
another 3.5" half-height drive, for later expansion. The case also
contains a SCSI port for attaching tape drives, extra disks etc.
The drive is a fairly fast Quantum ELP105S. The ICD adaptor is
better than the ICD Link. It includes a battery-backed system clock.
70MB extra drive: As a freebie for those who can make use of it, I will
add this 5.25" slower drive, which does not fit in the same casing.
I used it with the above drive but in the casing that now houses my
tape drive.

Price, including delivery in the UK, 225 pounds ono.

If you are within what I consider a reasonable distance of Reading or
Abingdon, I am prepared to deliver in person and assist setting up the
software drivers.

Make me an offer...

It's ver true that ST Format have a peculiar policy on what they review, esp. PD stuff. Several things got less than 40% in the May ish., and there's certainly quality stuff that could have gone in there instead. I've talked to the DPL owners who put the stuff in... They're fuming and say that they'll never send STF stuff again!!!!

Hurah to that...

If your father or shop-owner friend doesn't mind, then that's a great system for both buyer and seller as long as the issuing bank doesn't get upset (or find out about it). Unfortunately, I venture that few shareware developers have such outlets for processing 'plastic' available to them.

>I do not actually know how widespread VISA is in the U.S., but in the U.K.,
>at least half of all shops accept VISA.

In the US, most _every_ retail establishment takes Mastercard and Visa; they do if they want to stay in business very long, anyway. :)

Interestingly, while automatic teller machines are very common, the use of bank cards that automatically debit a buyers checking/savings account is not near as prevalent in the US as in Britain, Australia and New Zealand. Yanks still depend very much on paper checks... not near as convenient, IMHO.

There is a review of SMS2 in a recent ST magazine - I think it was the last ST Format.

It does look like an impressive product, but then, many technologically innovative and impressive products are doomed to failure in this modern day, cash orientated world. Sad fact of life... :-(

SMS2 looks interesting, but for me, and many others, we simply cannot afford 160 odd quid on something that is interesting, rather than vital.

Of course, the price has to reflect developement and other costs, I realise that, but it is ultimately down to getting many people owning it, and I don't think that will happen (especially with all the mtasking software flying about at the moment - Mag!X is 60 pounds)

Are you sure your not talking about a wire? When I talked to the US
banker, I believe that he said that a IMO only costs money on the sending
end, not the cashing end (unless of course, the money was sent in forign
currency, then the US bank would have to exchange it for US dollars,
which would cost some sort of fee on the receiving end). A wire on the
other hand costs money to send AND to receive. BTW: How much is a NLG
is US funds?

>> Although this method is fairly inexpensive, it does have some
>>drawbacks. 1) After the IMO has been drafted for person's name (or a
>>company), the transfer still needs to be sent... air mail is pretty

I'm very, very glad someone said this. I was about to burst! Thanks
Jon!

(As you may not recall, I promised to stop frothing at the mouth
whenever someone claimed the Medusa was 64Mhz '040; sure wish some
people's press releases would change though...)

>shame (which isn't that hard... {please - no flames}).
>
>To register, Mr. X needs to get $100 US dollars to Mr. Z, the author of
>WordCrunch. Here are the various methods that I have looked into:

First of all, I think your example of $100 is a bad one. This because $100 is *very* rare as a shareware fee. By using $100 as the base payment, the transfer costs seem small compared to the base payment. If the fee is $25 and it cost $15 to send it you have a whole lot different relation between the two.

>Check
> This works great if your in the US, but apparently the usage of
>checks isn't as common abroad as it is here in the US, so Mr. X would not
>be able to send Mr. Z a check for $100..

Checks in Norway cost between $15 and $45, depending on how much feedback you want from the bank (ie the last fee include a fax with confirmation from the receiving bank and is direct transfer)

>International Money Order
> Although this method is fairly inexpensive, it does have some
>drawbacks. 1) After the IMO has been drafted for person's name (or a
>company), the transfer still needs to be sent... air mail is pretty
>expensive, and ground/sea takes a long time (perhaps 4 ~ 5 weeks). 2) If

>(because it's made out to a specific individual), but it is up to Mr. X
>to cancel the IMO and send a new one, and Mr. Z will not be able to do
>anything about it.

IMO from Norway (a Postal Giro, really) cost around $12 if you don't have an account and $8 if you have. Air mail delivery is included and takes 7-10 days, depending on traffic at the foreign exchange department at the Norwegian Postal Services. As for cancelling etc. I don't know anything about that since I haven't had a single problem with the method in the 10 years I've been using it. One thing, though: *ALWAYS* send money in the receiving country's currency. I got a payment from Canada which was in US dollars and would have had to pay a fee to cash it. I just mailed it back to the sender and we did it again, this time in NOK.

>I'd appreciate it if someone in another country would respond to this and
>tell us what it would cost on their end (e.g would it really cost $10 to
>do a IMO), and comment on how much of a hassle each system would be.

I guess the best thing to do *before* sending anything is to get a trustworthy friend in the receiving country and, if possible, get some of your friends who are using the same software to join in for the payment. If 3-4 pay for their licenses at the same time, the transfer fees get divided between you, if not you could send off for several different licenses at the same time. The friend in the other end would send out the physical checks (or whatever) and you might end up paying for 2 transactions instead of two (assuming a check internally in the country cost 1/10 of a trans-atlantic one). I've done this a few times when dealing comics and it has worked fine so far.

No kidding. A decent RISC workstation (HP's 712/80i.. the "Gecko"; that may be the wrong model number) that's quite a bit faster than the '040 is around $3300 US apparently (that's with 16M RAM, 200-300M disk, and a monitor).

I think the "Gecko" will be the low-cost NEXTSTEP workstation of choice by this time next year (NEXTSTEP for HP's PA-RISC is in beta now, should be out this summer; I'll take one!).

> (no vapor-ware?)
>
>-anybody done it yet ?
>-anything else I should know ?

The SCSI controller of the TT is a 5380 chip, this one can not handle
synchronous data transfers.

So if thats the only SCSI transfer it can make I'm afraid you can't use
that CD-ROM drive with the TT. I'm using a NEC CD210 drive which works just
fine on the TT SCSI port. And yes, you do need a driver. You can use the
freely available Metados drivers or the Mint XFS driver software to handle
the filesystem of the CD-ROM discs (ISO standard).

Maybe you can get the drivers first and ask your reseller if you may try it
out. When using a standard (Macintosh) SCSI cable there will be no harm
done in connecting it to the TT-SCSI port. You just have two options. It
works or it doesn't :-)
Just check the SCSI ID setting of the CD-ROM drive (anything other than 0
or 7 is OK) Depending on the Harddisk driver software you may see if the
CD-ROM drive is responding and returning its ID correctly. AHDI from Atari
is configurable so it checks all the SCSI IDs and shows on screen the
resulting text.

Good luck,
Gert

Well, to continue along this, I have bought some stuff from the US lately, and
I have paid in US funds.

What I do is get a US Money Order, which is a money order drawn in US funds.
At the Bank they charge you AUS$8 for this service, at the post office, AUS$6.
Guess which one I went to ...
On top of this is the charge for the actual money, at the moment I get about
US$0.72 for AUS$1.00, so for US$100 I pay about AUS$139 plus $6 for the MO.
The recieving party then just rolls down to the bank or P.O. and gets the $100.
All charges come from the $6 you 'buy' the cheque with. Hope this makes some
sense.

Regards,

Karl.

>neccessary or relevant to take up space with what is to all intent's was a bit
>of publishers tit for tat.

I don't agree. Okay, I'm a STR writer, sure and you can call me biased,
but Vic was simply pointing out some *lies* that STF had claimed as truth.
This could be damaging to STR sales, which Vic has a duty to protect and
so he acted in the only way he could. The only other alternative would be
to have done some lying himself - a thing that Vic wouldn't do.

>I know where STF's fault's lie and IMO verdicts about its merits should be left
>to the reader's and to what type of magazine they wish to read.

I agree, if Vic had been saying "the contents of this magazine are crap"
then I'd have had great trouble in working for STR any longer. But he
didn't.

A few magazines (ST INFORMER) have quoted 120,000+, though someone said an "Atari spokesman" quoted "50,000 - 100,000" (broad range). I'd bet that Jaguar sales worldwide are at least 75,000 units, though I too would prefer to see an official figure.

2903. 2nd CFV: comp.sys.atari.announce moderated

Newsgroup: comp.sys.atari.st
Date: 1994-05-17 01:48:46 UTC
From: rdippold@qualcomm.com
Message-ID: <comp.sys.atari.announce-CFV2@uunet.uu.net>
Source record: 187140
Cross-posted to: news.announce.newgroups,news.groups,comp.sys.atari.st,comp.sys.atari.8bit,maus.sys.atari.hardware,maus.sys.atari.software,maus.sys.atari.talk,ctdl.sys.atari.st,fido.ger.atari,fr.comp.sys.atari

```
LAST CALL FOR VOTES (of 2)
moderated group comp.sys.atari.announce

Newsgroups line:
comp.sys.atari.announce Atari related hard/software announcements. (Moderated)

Votes must be received by 23:59:59 UTC, 30 May 1994.

After this CFV appears on news.announce.newgroups it will be sent to
the mailing list <lexicor-list@lexicor.com>.

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Yat Sui <ysiu@lexicor.com>

CHARTER (Yat Siu)

The proposed group will provide a forum for the announcement and
release of new atari related products:

* atari computer hardware and software
* commercial as well as shareware or related
* announcement from individual authors, companies or distributors
* press releases

Yat Siu (Lexicor@world.std.com) will be the moderator.

Justification:

There are currently comp.sys.atari.st, comp.sys.atari.st.tech,
comp.sys.atari.8bit and comp.sys.atari.advocacy, the first three
groups are discussion forums for their (specific) related hard and
software. Product announcements in these discussion forums of new
releases by either commercial, shareware groups can often be
considered a service but not encouraged. The atari computer market is
not very widely distributed and it is getting increasingly harder to
know more about new products.

To begin with a product announcement group would encourage the
people to announce their new products for the benefit of all atari
computer users. It will also allow the reader to focus for a new
newsgroup only for product announcements or press releases and will
also make the reader more aware of his/her options.

HOW TO VOTE
```

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.

Your mail message should contain one of the following statements:
I vote YES on comp.sys.atari.announce
I vote NO on comp.sys.atari.announce

You may also ABSTAIN in place of YES/NO - this will not affect the outcome.
Anything else may be rejected by the automatic vote counting program. The
votetaker will respond to your received ballots with a personal acknowledge-
ment by mail - if you do not receive one within several days, try again.
It's your responsibility to make sure your vote is registered correctly.

One vote counted per person, no more than one per account. Addresses and
votes of all voters will be published in the final voting results list.

comp.sys.atari.announce Bounce List - No need to revote

Well in the latest ST User they say that the cash shortfall for the Financial year 1993 was $48.9 million compared with last years $73.6 million. But durring the same period sales fell from $127.3 million in 1992 to $28.8 million. Sam Tramiel is saying once that the JAGUAR takes off the company will jump out of the RED. Lets hope so because if not it might be the last big thing that Atari does.

Well ,thank's for confirming my suspicion's . That'll save a me
continuing to waste a lot of time dissecting my config's etc :-)

Unfortunately I don't have this sort of access to the net ATM ...mail only
But I am fast becoming aware that I need FTP aswell.

In the meantime anyone got this on a Fido/Atari/Nest network file area ?

It was none other than Bob Luneski that wrote on 11 May 94 that ,
>>> I have Diamond Back 2.42, and am looking to upgrade it to 3. Is it
>>> out yet?
>>> What is the upgrade path?
BL> Yes, it is available now please contact Oregon Research in the States
BL> or HiSoft in Europe for upgrade information.

Whilst DB2 is my prefered backup software there was one feature that I did find somewhat disappointing ,particularly compared with system's I have used on other platform , and that is in the handling of incremental backup's .

Has there been any improvement's been made to this and in particular to support 'updating' of previously made BU saveset's .

I cannot really justify a streamer so backup to Floppy's ,I guess I am in the majority here ,so would find it much easier ,not to mention less of a headache in term's of BU management to keep the amount of saveset's to a minimum.

Hello,

I have recently purchased STraight Fax and I found out that I need
to have GDOS or one of it's relatives installed in my system to print
out incoming faxes. If anyone know's how to set it up, and knows where
to get the right pieces from the internet, please let me know.

I know I saw a 5 part FAQ on GDOS a while back. If anyone knows
where it is located, or has the FAQ on file at your place, let me know and
we'll arrange a mailing of it.

Thanks a lot,

Joseph Hogan

Hi,

I'm looking to get an electronic personal organiser basically to keep a diary, 'phone/address book and take notes/write memos for myself at meetings (a "to-do" list type thing would be handy too). I have recently seen some stuff about the Atari Portfolio but the things I've seen had very few "hard facts" so I was wondering if anyone could send me the specs./tell me what they think of the built in software and stuff like that ? I'm also interested in finding out what extra storage facilities it has and what extra software you can buy.

(A comparison with something like the Psion 3 would be nice as I've used one of them a bit before)

I gather the Portfolio can exchange info with an ST which could be useful as I've got one of those - any further details (on things on software for both platforms please) ?

Thanks in advance for any details - e-mail prefered (as it's a little off subject for c.s.a.s & c.s.a.s.t anyway) but I'm not that fussy !

Cheers,

Martin

>of reading it i have hardly gained any info. So who does think STF is any
>good , reasons please !!

I agree. Format USED to be good, but over the last year has not only got thinner but the actual content of the pages is pretty bad now.

It still looks the most professional of the three (design wise), but for content Review I feel is the best now.

I thought this month's Format was really bad - nearly stopped me from buying any more. From now on, I am going to look through it carefully before I buy it.

Probably the reason for the high market share is that it appeals to the games playing majority with STs due to it's simplistic style, content and it's long life.

Review on the other hand appeals more (IMHO) to people using ST's (semi) seriously ie. more than just playing games.

Just my ha'penny's worth

: I am a very serious user but ST format contains so much cr*p By the end
: of reading it i have hardly gained any info. So who does think STF is any
: good , reasons please !!

The only reason that I buy STF is because I want to start writing articles for magazines, and am seriously into STs. So to get a general idea and different viewpoints on the ST world, I get all the UK ST mags (which has to include STF).

Other than that, I don't think that I would buy it.....it has just gone downhill, since I started buying it in 1990. Aparently, it was one of the best ST mags to buy around that time.....and before then.

I think that the rason STF does quite well is because of it's games coverage, and targeting toward the younger generations (ie Dominic Diamond types). Loads of little 'uns ask me about my ST....and the next question is usually....have you got this game...that game....what's your top score in this game, etc, etc, etc....you get the general idea. Any newsagent you go into, will always sell STF, even if they do not do any other ST mag. Why? I get so frustrated sometimes. Also, I don't really play games on my ST. Maybe now and again.....

A lot of older people, people in jobs etc, have a PC at work, and the only reason they have a PC,Atari,Amiga at home is....no, not to bring home their work....but to play games. Sad cases, I must say. If you want games, then get a console.

So, this is why I think the STF sells well.....games coverage....what most people have a computer for. (By most, I mean the general public).

Just my view on things Atari.

Danny.

Source record: 186806

it gains such sales IMO because it is the only magazine alot of places seem to have in most of the time. It is always the first on the shelves down here in brighton and so alot of people buy it rather than wait around for ST User of ST Review. Alot of places either dont stock any ST mags or just ST Format. I guess alot of newsagents stock it in preference to the others because of its (popular?) brothers Mac Format, Amiga Format, PC Format, etc.

I think ST User is the best mag, but finding it is very hard, guess i had better fill in that subscription. Oh the days when you could browse along the lines of ST mags (sniff).

If you don't already have NVDI, I recommend you get it. It comes with its
own version of GDOS, which is immensely faster than the Atari version.

You will find Atari GDOS 1.1 bundled with a few shareware packages
available over ftp. I can't remember which one though.

2937. Ram tester wanted

Newsgroup: comp.sys.atari.st
Date: 1994-05-17 12:27:26 UTC
From: dennis1@liverpool.ac.uk
Message-ID: <Cpy59r.Iqq@liverpool.ac.uk>
Source record: 187090

Does anyone know where I can get a good ram-tester for the ST. I am going to upgrade a 512 to a 1024 and would like to check out the upgrade.

Many thanks....

Dennis.....

Denesh Bhabuta (vctec@westminster.ac.uk) wrote:
: Mark King (Mark.King@mettav.royle.org) wrote:
: : [stuff deleted] ..... ST format contains so much cr*p. By the end
: : of reading it i have hardly gained any info. So who does think STF is any
: : good , reasons please !!

I do buy STF occassionally, checking out its contents (and the cover disk) carefully before parting with my cash. So often a promising article such as the review of SMS2, turns out to have little about the product itself - just loads of waffle and/or hype.

: I think that the reason STF does quite well is because of it's games
: coverage, and targeting toward the younger generations (ie Dominic
: Diamond types). Loads of little 'uns ask me about my ST....and the next
: question is usually....have you got this game...that game....what's
: your top score in this game, etc, etc, etc....you get the general idea.

I must admit that they are usaully quite good with their games coverage. I use my ST for all its strengths, which includes a fair bit of gaming. STF seem to play/test the games quite thoroughly.

: Any newsagent you go into, will always sell STF, even if they do not do
: any other ST mag. Why? I get so frustrated sometimes.

Me too, here in North Wales there are (as far as I know and I've searched a _lot_ of towns) only two newsagents that stock an ST Review on their shelves. One of them only stocks a single copy (which I buy) which leaves about two copies for everyone in North Wales. There's practically no chance of STR increasingtheir readship here if no-one can get a hold of the magazine to see how good it is!

: A lot of older people, people in jobs etc, have a PC at work, and the
: only reason they have a PC,Atari,Amiga at home is....no, not to bring home
: their work....but to play games. Sad cases, I must say. If you want games,
: then get a console.

I'd have to disagree. Games available for the ST are generally more varied than the basically platform based games for consoles. There is also a wide range of high quality budget games, public domain games, and shareware games. With the cost of cartridges for consoles so high and still rising I'd much prefer to stick with an ST for the time being.

: So, this is why I think the STF sells well.....games coverage....

I'd agree.

: Just my view on things Atari.

and mine.

: Danny.

The company who supplies the upgrade usually supply a RAM tester with it.
Certainly the Marpet ones should come with a tester. A got mine from
Ladbroke's (Preston) and that had a test disk with it.

2940. WANTED HD CASE, PSU & CABLES FOR FALCON030

Newsgroup: comp.sys.atari.st
Date: 1994-05-17 13:21:28 UTC
From: cs93dlh@dcs.exeter.ac.uk
Message-ID: <1994May17.132128.7946@cen.ex.ac.uk>
Source record: 187093

Continuing my search for a case, psu and cables to attach a 3.5" SCSI
drive mech. to my Falcon, it has been suggested to me that I could buy a
PC mini tower case and put the drive in that.

Mini towers costing about 50 pounds, this was a bit more than I had planned
on spending. Is it possible to easily relocate the Falcon motherboard into
a PC mini tower, and externalise the keyboard?

Alternatively if anyone can point me to a good cheap HD kit in the UK
I would be very grateful.
All my investigations so far have seemed to indicate it will be more expensive
to get the equipment to attach the drive to my falcon than it was to buy
the drive in the first place.
Any help/advice appreciated,

Hello out there,

I want to connect a second IDE harddisc to my Falcon.
Now my first question is: where do I get the
connector from 2.5" to 3.5" IDE ? I've been in two
local electronic stores but they couldn't help me.
Has anybody tried to do this before ? Where do I
get this connector and which problems might I have
with it ?
And another thing: isn't AHDI only able to control
one IDE drive ?
Which other hard disc drivers will work correct ? (Hushi ?)

Thanx in advance
Alex

When I send money from Norway I use an international post transfer card
("Service des cheques postaux, Avis de versement VP1") from my postgiro
account to the receivers post- or bank account. I just fill in the
details and send the card to the post-service and they do the rest.
The cost is very low, and the money goes straight from my account to
the receivers account without anyone having to anything to get it..

> too would prefer to see an official figure.

Don't hold your breath. Atari has never (at least since JT took over, AFAIK) published official sales figures on any hardware. It's much more effective to let the public make wild, overly optimistic estimates than to face the harsh reality of relatively poor sales numbers. :)

While I'm not so naive as to think the Jag will 'save' Atari Computers, I do think it is a superior game unit and a bargain compared to the 3DO. But by the same token, I believe Atari will blow the marketing on this one too. Sure, they will sell a few units but will never saturate the marketplace.

Remember the Lynx was (is) far superior to the Game boy and everyone knows what happened in _that_ contest.

Hey, just because I recommend them, doesn't mean I know anything about them. :)

Seriously, I'm not sure how widespread they are around the world. I've got to go to my local PO today anyway so let me see if I can find some info to relate here.

But in the meantime, I'd be more than happy to launder foreign currency for say, oh, a 50% (mandatory) gratuity??? What a deal, eh? ;-)

The docs are wrong - if you run the program at 16MHz, the display still
corrupts, and at 8MHz it processes as slowly as ever. This feature just
doesn't work.

However, some of the other changes - like handling TGA and RAW files of less
than 320x200 - make it worth upgrading from version 3.

CEO file contents:
Hi, all !

I wouldn't want to start some unfounded rumors but...

Perhaps I've missed something here, but there's a discussion going on
in the french newsgroup fr.comp.sys.atari about a new atari machine.

Of what I've understood the machine has been officially presented to
developpers, it has Jaguar chips, plus a Power PC and is 100%
Falcon compatible. Sounds too good to be true doesn't it ? Perhaps it's just a
Jaguar card for Power PC machines, I dunno.

The info comes from a guy who knows some of these developpers who have seen 4
of these machines. The source seems ok to me.

Why haven't we seen this in c.s.a.s ? Is this just in Europe or France ?
Am I missing something here ? or am I being conned ? Are there still some guys
with brains at the Corp ? and does God exist ?

Anyone ?

True enough, but it's still expanding them to fill the screen - as much as I like the prison bar effect, I'd have thought that would have been fixed by now.

BTW, none of the Targa files I have seem to display - all I get is a blank screen. It's possible that PChrome4 doesn't like whichever variant they've been stored in (most have been through Image Alchemy on my work PC at some point) - perhaps a different converter may do the trick.

The ST Format article does make passing mention of Unix programs
having been ported, but does not go into detail on the similarities/
differences between SMS2 and Unix. I doubt SMS2 could handle multiple
users and keep its promise re: speed.
I doubt old TOS stuff could run... but raw 68000 code might. It
depends on what traps do what (Duncan shows how limited his knowledge of
68000 and TOS is), I expect.

|> But as far as I can make out, its a completly now OS with no backward
|> compatability nor compatable with other OS's.

No great loss, if existing Unix software can be recompiled for
it. There has been mention of a C compiler, this seems to be a good step
forward. As long as authors use the O/S and the GUI correctly, SMS2 does
have similar facilities to Unix, and the compiler uses ANSI C, then SMS2
could well have a very bright future.
As for the other multitasking O/S... as I understand it, those
require a hard drive and are essentially similar to GEM/ TOS. Since SMS2
is cartridge based and does not appear to require anything more than a
floppy drive, this gives it a convenience I find very attractive.
Also, I've always found GEM to be a little limited as an
interface. This is probably why so much software ignores it. It is
simple and fairly intuitive, but it also seems a little clumsy and not
very 'open'.
If SMS2 is as easy to use as it seems, then an ST equipped with
SMS2 should have no trouble getting software. The problem is whether
someone will look and see the ST, a old architecture on the decline, or
SMS2, a powerful new top quality O/S. Linux is giving the PC a tad more
credibility, isn't it?

Duncan.

Danny, can you explain to us all the reasoning behind this system, which
can at best be called _wierd_. It cannot be found at any other ftp site to
my knowledge, and only serves to confuse.
IMHO. it is better to access HENSA via gopher anyway, as this seems to
automate this lookup process.

I had a mysterious problem with my mouse which I finally tracked to a loose
solder connection on the controller chip. You may want to examine the PCB
in the mouse, closely.

Hope this helps,

Jens.

Hello,

I just got back from school and reset my computer back up and I had to leave my printer and lots of other stuff at a friends house while coming home as I had too much stuff.

I had an Action Printer 5000 from Epson, and now I am using an Action Printer 3000. I am having a problem with the print out. When I print it out, There is a line inbetween each printed line. I thought maybe there was a DIP switch out of line, but when I changed it, I got 3 lines in between each printed line.

If any one has any ideas, please send them my way.

Thanks again,

Joseph Hogan

My understanding is that additional hardware is needed to read GCR formatted disks reliably. Drive pulsing would probably have to be tuned to each separate mechanism (perhaps even each separate unit) to be reliable. The Spectre GCR Mac emulator provides this capability (by adding some logic), as well as Mac emulation of course.

I heartily agree. GDOS is actually pretty neat to have around all the time,
but was too much of a pain with the Atari version (or even G+Plus). NVDI
is excellent stuff. It combines a new fast GDOS with a super fast VDI (which
will speed up GEM graphics tramendously). It also gives you an easy way
to replace system fonts with GDOS ones.

Hahahahahaha!!!! Oh, please... stop it... it hurts! Hahahahahaha.... :)

>Sounds too good to be true doesn't it ?

Like my grandpappy used to say... "then it probably is."

>Perhaps it's just a Jaguar card for Power PC machines, I dunno.

Now that item _is_ a lot closer to reality.

>The info comes from a guy who knows some of these developpers who have seen 4
>of these machines. The source seems ok to me.

Oooo... a guy who knows a guy who knows a guy who sez that so-and-so saw....

Your questions:

>Why haven't we seen this in c.s.a.s ?
>Is this just in Europe or France ?
>Am I missing something here ?
>or am I being conned ?
>Are there still some guys with brains at the Corp ?
>and does God exist ?

My answers:

Because it's bovine fecal material (BFM).
No, since BFM knows no international boundaries.
Most likely.
Most definitely.
Yes, but they only empty the trash. <just a joke,guys>
The proof is all around you.

Ah, hope springs eternal in the pure and innocent Atari user's breast. :)

But, to get back to earth for a moment, if Atari _does_ come out with a new
computer in the near future it will most likely incorporate the Jaguar chip
set. A PPC cpu is a possibility, but a remote one, IMHO. Of course, this is
just from _my_ sources so believe who you will or make up your own rumors. :)

Cheers,

-Hutch- @ Fair Dinkum Tech

P.S.: My IAAD member lapel pin, offical Atari developer certificate, Bob Brodie's private pager number, and secret fuji handshake will get me a cup of coffee at most dives around the country... but only if I add 50 cents. :)

P.P.S.: While I may be 'roadkill along the Information Superhighway' it really doesn't matter since it's been so much fun getting here! Enjoy /|\ !

FWIK SMS2 is an implementation of the Sinclair QL O/S. Much of what I've
read about it has been in 'QL World' magazine.

Assuming this is the case (and flame if I'm mixed up somewhere ;-)

> What programming languages exist- LBASIC was mentioned, is there
>a version of C in the pipeline?

There is a fairly good C compiler for the QL, but nothing that gets
anywhere close to GNU C or Lattice C

> How similar to Unix is the multitasking?

Not particularly. MiNT is closer IMHO

> Does it support the standard ST/PC disk format (for floppy and

I believe so, although I don't think this is the standard.

> PD software was mentioned- how much is there, and where could I

Well I assume they mean the *vast* quantity of QL PD ;-) There is not
really a lot out there.

> What is it like to use on a 1mb floppy drive system?

Should be very good. Its a lot more compact than TOS.

IMHO don't bother. I've had a bit of experience of standard QL QDOS
(which as I said I *believe* SMS2 to be an enchanced port off, and in most
ways it has no advantages over TOS/MiNT or MINIX. Its only advantage would
be its compactness and efficiency.

:-)

I'd like feedback on this option:

Mail a heap of money to Joe Connor, who is collecting and
converting funds for a number of .de authors. This means
a single cash conversion, and more money for the authors.

I'd rather Joe get a small cut than the banks get a large one.

For example, if you can find 4 European authors that will work through Joe,
totalling, say, US$100, then it will still cost US$10 (or whatever, depending
on which option you use as described in earlier articles of this thread),
but this is effectively just US$2.50 per s/w item. The more authors you
can pay at once, the better.

Bruce Henry Freshwater was heard to say:

> Is it possible to use a PC SVGA monitor with a basic 520STFM ?
> If so, are adaptors readily available, cheap...etc?
> Also, if it is possible, is there any complex circuitry in the adaptor or
> is it possible to make one by connecting the relevant pins together ?
> If I can do this, could I then use the ST in high res screen mode ?

It is possible, unfortunately I've lost the text file I made up a long time ago. One thing about it is that very few SVGA monitors will work in the ST's colour mode because it is too low a frequency. It is best to get the specs on the monitor before attempting this as most SVGA monitors are merely multi-frequency and will handle 640,720,800 and 1024 horizontal, 350,400,480,600,768 vertical only (its cheaper that way). The monitor should generally say multi-sync, and must support 320x200 (15KHz horizontal sync, 50/60Hz vertical). If this is the case mail me and I'll type something up to send to you...

Hi I just dnloaded STZIP 26 from Genie,
may be some one with FTP access will upload this to A.A.

It claims to have all the later bugs fixed....

What's new in STZIP ?

Version 2.6 27 Apr 94
-----------------------------

Argl, some new bugs managed to introduce themselves in v2.5...

- First file in a zip didn't extract in Gem, fixed.
- Create directory in Gem had some new and different problems, fixed.
- Tempo directory name was cleared at the config box apparition, fixed
(reported by Christophe Boyanique)
- Fixed the 'no file(s)' problem occuring randomly in CL when extracting
files from a zip with subdirs (reported by Gerhard Hoelscher)
- It was impossible to extract only a file in CL if some files with same name
are in subdirs of the zip. Fixed. (reported by Gerhard Hoelscher)
Note however that using 'stzip -xr test readme' extracts all the readme
files from the zip.
- Empty subdirectories were stored when using 'stzip -ar test readme'. Fixed.
(reported by Gregor Duchalski)
- Maximum numbers of parameters in CL increased to 100.

I have for sale the following odd-ball lots OR I WILL TRADE for some ST hardware/software! Fell free to make me an offer on everything!

SC1224 Monitor in GREAT shape! Get it for the Jaguar! ($75)

1040STf with TOS 1.0 (!!) and 1 MB RAM ($60)

1040STfm with TOS 1.4 and 2.5 MB RAM (tech specialties board) ($75)

Intellivision Computer Module (Complete, new in box) ($20)
Turns any Intellivision into a computer!

Spectre GCR and ROMs!! with version 3.0 of the software ($150)

MAKE ME ANY OFFERS! The figures in the parentheses are just guidelines to what I am looking to get.

This copy of Freddie 1.2 is being evaluated.

:

I had a similar problem, and it was a the connection between the
mouse and the keyboard. I soldered my mouse cable in, but a wiggle or
reseating is less drastic and may work.

The other thing to try is reseating your chips (the TOS ROMS in
particular). The may sound strange, buy can sometimes cause this symtom.

>

Rowland,

THe Phoenix Version 2 for the 030 requires the 68882 math-co_pro
if you load the phoe882.prg version...run the regualr Phoenix 2 (phoenix2.prg)
if you do not have an FPU.

The version for 68030 withou fpu if not on your zip file is on
ftp.std.com in /pub/atari/Graphics/Lexicor/Demosoftware.

Phoenix Version 2.0 runs on any atari in minimum 640x200 resolution.

I hope you enjoy it..if you have any more problems email me or ask
away over here...

Cheers

ATARI UNITED! SoftWareHouse is working on an arrangement with Joe to handle shareware registrations here in North America. When we get the details worked out, they will be added to the distribution files of the software being handled.

Having a single place to send contributions to will definitely reduce the per registration cost. Perhaps someone in OZ would be interested in handling registration tasks for the Southern hemisphere?

A very rotten pile of BULL SHIT is looming ahead if we don't make
a stand and voice our opinions on what I am about to inform
everyone here on. I will apologize now for the EXTREME length
of what follows, but I feel it is necessary to preserve what
we now enjoy. This is not about the Jaguar, however we may
not be able to afford to discuss it if we don't do something
about it.

There is a very strong possibilty that in the very near future,
the mega communications giants are going to charge for every single
packet going in and out of Internet Network Access Points and high
speed backbones that they NOW control. The National Science Foundation
just awarded five big contracts giving them this control.

Groups such as this one will most likely shut down as the listservers
will no longer be able to afford to operate without in turn charging us
for their sevices. What do you think will then happen to the readership
here if we are charged for the priviledge of enjoying the jag list?
Most of us will probably be forced to unsubscribe. Those of you that
already pay AOL, Compuserve, Delphi, etc. for internet access will be charged
even more for that priviledge. Those of you that think your "by-the-character"
charges are high now, just you wait. Everyone who uses the internet
(everyone here included) should read this and reply as indicated.
I find it very appalling to think about large corporations fattening their
guts even more by charging you and I for every single packet of
(currently free) jaguar info, data, e-mail, mosaic request, etc.
If we don't voice now on this one folks, the information superhighway
will be obstructed with potholes and toll booths.

If you complain about the length of messages now, just think how
PISSED-OFF you will be if you have to pay for it (or pay more than you do now).

The following is long and very frightening. IT SHOULD SCARE YOU!!!
DO SOMETHING ABOUT IT!!

Please send this to everyone you know. The more people that respond,
the better our chances are that we can kill this thing.

I'm not going to sit back and watch it happen, I hope you don't either.

Just my $0.02. I may need the lousy $0.98 so I can send this e-mail out!

Scott Buennemeyer

Subject: Metered Usage of the Internet: JSN

Please forgive the mass mailing, but I feel this is a subject
which is of great importance to anyone who benefits from the
bountiful resources of the Internet.

A very bad storm is brooding on the horizon.

In the future, you might have to pay a charge for every E-mail
message you send or receive, every Usenet article you read,
every kilobyte of data you transfer with ftp, every hypertext
link you follow with NCSA Mosaic or Gopher...

Hopefully this frightens you as much as it does me.
But it will happen, unless YOU do something about it.

Please read the attached, fill out the requested info, and
mail it back to mike@essential.org. It also wouldn't hurt to
forward a copy of this to everyone you know on the Internet.

Thanks for your support.

TAXPAYER ASSETS PROJECT - INFORMATION POLICY NOTE
May 7, 1994

- Request for signatures for a letter to NSF opposing metered
pricing of Internet usage

- Please repost this request freely

The letter will be sent to Steve Wolff, the Director of
Networking and Communications for NSF. The purpose of the letter
is to express a number of user concerns about the future of
Internet pricing. NSF recently announced that is awarding five
key contracts to telephone companies to operate four Internet
"Network Access Points" (NAPs), and an NSF funded very high speed
backbone (vBNS). There have been a number of indications that
the telephone companies operating the NAPs will seek permission
from NSF to price NAPs services according to some measure of
Internet usage. The vBNS is expected to act as a testbed for new
Internet pricing and accounting schemes. The letter expresses
the view that metered pricing of Internet usage should be
avoided, and that NSF should ensure that the free flow of

information through Internet listserves and file server sites is preserved and enhanced.

Jamie Love, Taxpayer Assets Project (love@essential.org; but unable to answer mail until May 15). Until then, direct inquires to Michael Ward.

If you are willing to sign the letter, send the following information to Mike Ward of the Taxpayer Assets Project (mike@essential.org, fax: 202/234-5176; voice: 202/387-8030; P.O. Box 19367, Washington, DC 20036):

Names: _____
Title: _____ (Optional)
Affiliation: _____
(for purposes of identification only)
Address: _____
City; St, Zip _____
Email Address: _____
Voice: _____
for verification)

The letter follows:

Steve Wolff
Director
Division of Networking and Communications
National Science Foundation
1800 G Street
Washington, DC 20550

Dear Steve:

It is our understanding that the National Science Foundation (NSF) and other federal agencies are developing a new architecture for the Internet that will utilize four new Network Access Points (NAPs), which have been described as the new "cloverleaves" for the Internet. You have indicated that NSF is awarding contracts for four NAPs, which will be operated by telephone companies (Pac Bell, S.F.; Ameritech, Chicago; Sprint, NY; and MFS, Washington, DC). We further understand that NSF has selected MCI to operate its new very high speed backbone (vBNS) facility.

There is broad public interest in the outcome of the negotiations between NSF and the companies that will operate the NAPs and vBNS. We are writing to ask that NSF consider the following objectives in its negotiations with these five firms:

PRICING.

We are concerned about the future pricing systems for Internet access and usage. Many users pay fixed rates for Internet

connections, often based upon the bandwidth of the connection, and do not pay for network usage, such as the transfer of data using email, ftp, Gopher or Mosaic. It has been widely reported on certain Internet discussion groups, such as com-priv, that the operators of the NAPs are contemplating a system of usage based pricing.

We are very concerned about any movement toward usage based pricing on the Internet, and we are particularly concerned about the future of the Internet Listserves, which allow broad democratic discourse on a wide range of issues. We believe that the continued existence and enhancement of the Internet discussion groups and distribution lists is so important that any pricing scheme for the NAPs that would endanger or restrict their use should be rejected by the NSF.

It is important for NSF to recognize that the Internet is more than a network for scientific researchers or commercial transactions. It represents the most important new effort to expand democracy into a wide range of human endeavors. The open communication and the free flow of information have make government and private organizations more accountable, and allowed citizens to organize and debate the widest range of matters. Federal policy should be directed at expanding public access to the Internet, and it should reject efforts to introduce pricing schemes for Internet usage that would mimic commercial telephone networks or expensive private network services such as MCI mail.

To put this into perspective, NSF officials must consider how any pricing mechanisms will change the economics of hosting an Internet electronic mail discussion groups and distribution lists. Many of these discussion groups and lists are very large, such as Humanist, GIS-L, CNI-Copyright, PACS-L, CPSR-Announce or Com-Priv. It is not unusual for a popular Internet discussion group to have several thousand members, and send out more than 100,000 email messages per day. These discussion groups and distribution lists are the backbones of democratic discourse on the Internet, and it is doubtful that they would survive if metered pricing of electronic mail is introduced on the Internet.

Usage based pricing would also introduce a wide range of problems regarding the use of ftp, gopher and mosaic servers, since it conceivable that the persons who provide "free" information on servers would be asked to pay the costs of "sending" data to persons who request data. This would vastly increase the costs of operating a server site, and would likely eliminate many sources of data now "published" for free.

We are also concerned about the types of accounting mechanisms which may be developed or deployed to facilitate usage based pricing schemes., which raise a number of concerns about personal

privacy. Few Internet users are anxious to see a new system of "surveillance" that will allow the government or private data vendors to monitor and track individual usage of Information obtained from Internet listserves or fileserves.

ANTI-COMPETITIVE PRACTICES

We are also concerned about the potential for anti-competitive behavior by the firms that operate the NAPs. Since 1991 there have been a number of criticisms of ANS pricing practices, and concerns about issues such as price discrimination or preferential treatment are likely to become more important as the firms operating the NAPs become competitors of firms that must connect to the NAPs. We are particularly concerned about the announcements by PAC-Bell and Ameritech that they will enter the retail market for Internet services, since both firms were selected by NSF to operate NAPs. It is essential that the contracts signed by NSF include the strongest possible measures to insure that the operators of the NAPs do not unfairly discriminate against unaffiliated companies.

Recommendations:

As the Internet moves from the realm of the research community to a more vital part of the nation's information infrastructure, the NSF must ensure that its decisions reflect the needs and values of a much larger community.

1. The NSF contracts with the NAPs operators will include clauses that determine how the NAP services will be priced. It is important that NSF disclose and receive comment on all pricing proposals before they become final. NSF should create an online discussion list to facilitate public dialog on the pricing proposals, and NSF should identify its criteria for selecting a particular pricing mechanism, addressing the issue of how the pricing system will impact the Internet's role in facilitating democratic debate.

2. NSF should create a consumer advisory board which would include a broad cross section of consumer interests, including independent network service providers (NSPs), publishers of Internet discussion groups and distribution lists, academic networks, librarians, citizen groups and individual users. This advisory board should review a number of policy questions related to the operation of the Internet, including questions such as the NAP pricing, NAP operator disclosure of financial, technical and operational data, systems of Internet accounting which are being tested on the vBNS and other topics.

3. NSF should solicit public comment, though an online discussion group, of the types of safeguards against

anticompetitive behavior by the NAPs which should be
addressed in the NSF/NAPs contracts, and on issues such as
NAPs pricing and Internet accounting systems.

TAP-INFO is an Internet Distribution List provided by the Taxpayer
Assets Project (TAP). TAP was founded by Ralph Nader to monitor the
management of government property, including information systems and
data, government funded R&D, spectrum allocation and other government

CEO file contents:

Hi !

Warwick Allison (warwick@cs.uq.oz.au) replied to my post about a probably fictitious new atari machine that I was too lazy to translate the news from french to be able to quote them.

I'm sorry but as you've probably noticed I am using the Utexas remailer because I haven't got a real newsreader on the machine I use here. This is why I cannot put in quotes without typing them back in from scratch. Yes, I'm damn too lazy to do that. I'm quite able to translate french though, thank you.:)

Other thing is, fr.comp.sys.atari does exist. There is a life outside the american (well, international) newsgroups. As you've never heard of it, I presume that you've never read it - especially as it's in french - just like probably many others here. This is why I thought the information could interest someone.

I know that this stuff about a new machine is probably rubbish, but I just thought some of you guys could be interested or give your opinion.

That's all.
Nick

It is true, that Atari could easily blow the Jaguar thing, but they have alot
big names behind them on this one. I think that once the Jag gets going people
will support it and all Atari will have to do is sell it and makes profit :)

IMHO of course! ;)

Source record: 186952

Hi,

I've got a weird problem with ProTracker v2.0s from a.a.u.e running on my 2 Mb Mega STe and SCART tv. When I run PT the DMA sound output starts cracking or more like clicking irregularily. It doesn't do this on any other programs I have which use the DMA sound outputs or anything. Any ideas ??

Also, PT seems to be trying to extend the screen by removing the bottom border but this is intermitent, ie. it flicks on and off - is this "normal" ?

Thanks for any advice/help,

Martin

TITLE: Re: Information on SMS2 please

> FWIK SMS2 is an implementation of the Sinclair QL O/S. Much of what I've
> read about it has been in 'QL World' magazine.
> Assuming this is the case (and flame if I'm mixed up somewhere ;-)

Yup thats what I've heard.

> > Does it support the standard ST/PC disk format (for floppy and

Nope, one of their big mistakes, it has it's own format.

> Well I assume they mean the *vast* quantity of QL PD ;-) There is not
> really a lot out there.

They say there is quite a bit, but I'll be buggered if i can
find anything decent.

> What is it like to use on a 1mb floppy drive system?

It's fine, becuase most of it's on the ROM it runs pretty
smoothly, but I haven't got any decent apps to give it a
trashing.

As I said earlier, It's fast, smooth, but totally
non-standard in every department. I feel it needs to have at
least support for TOS floppies and a more standard look and
feel to the GUI before it will be taken seriously. This is a
shame because for the few hours I've spent with it I feel it
has got potential. If they added GCC, support for Minix and
TOS partitions, and went for a slightly more standard
Unix/X11 feel It could give the serious ST user something to
consider.

not quite correct. SMS2 is a bit like QDOS from good old Sinclair-QL. I think that the C68 C-Compiler for the QL should work

Steve Taylor (S.P.Taylor@bradford.ac.uk) wrote:

: Danny, can you explain to us all the reasoning behind this system, which
: can at best be called _wierd_. It cannot be found at any other ftp site to
: my knowledge, and only serves to confuse.
: IMHO. it is better to access HENSA via gopher anyway, as this seems to
: automate this lookup process.

Dear Steve, and all netters out there,

A short history on hensa might be useful....

Two things I've heard while I've been here:
1) When hensa first started out, it had only a few packages for each computer. These were best thought to be packaged under different package codes, as it was a neater way of storing.....and as there were a max of 20 packages for each computer, it was not too much of a pain to find anything. The growth in PD software was not perceived at the time.

2) When hensa first started out, software was going to be distributed on ANSI tapes, and the best way to do this was by having package codes (something to do with ANSI tapes do not allow same filenames).

Anyway, I think I believe reason 2, with a teeny weeny bit of reason 1. I know that the way software is kept here is "different" to other ftp sites, but in some ways it is better than other ftp sites.

I mean, for eg, if Atari Works was a PD package, where would it be stored under "conventional" directoriy structures? Would it go under Word processing, Spreadsheets, Databases, or Miscellaneous (where it would be of no use at all....people would have to know that it is in there). With Hensa, as we store software, I edit a *.msg file, which holds keywords for the software. Atari Works in the example, would have 3 different keywords associated with it, and so someone looking for the software can find it easily.

Steve is right about gopher, and I must say, that HENSA is lucky in this case, that gopher allows easy searching for software. Through gopher, software may be searched using keywords, package codes, and even name searches.

I'd also like to add that our WWW server also hooks into gopher for easy searching. I will also be posting regularly, a list of new software at our site, here on the net. Every week. Just like the a.a listing ;-). This will be in the form of the one that was posted earlier by me.

I hope this has answered your questions/queries. But if there is
anything else, then I'd be pleased to answr them too.

Danny.

|> There is a review of SMS2 in a recent ST magazine - I think it was the
|> last ST Format.

Yes, I know, and though it told me enough to get more interested
in SMS2 than in the disk based O/Ss, it left me with a lot of questions,
which is why I started this thread. Since then I've got a lot of info. from
the articles you have posted here, I've got more info.
But I've also found out about a *very* good article in the
upcoming June issue of ST Applications. You can get details of STA from
ST Club in Nottingham, phone 0602-455250 or fax 0602-455305. I don't
know how to call them from abroad, I've never been abroad and wanted to
phone someone in England before.
Lordy, all this makes me sound like a complete SMS2/ STA
advocate. I don't work for them or anything, I just like them. This is
not a sneaky attempt to stir up interest artificially, they deserve all
the interest they can get, IMHO.

Duncan (75% certain to save up and buy SMS2)

PS. I wonder if not supporting TOS disks is really a mistake... Perhaps
some kind soul could write ST File Exchange, or summat?

Hmm, if anyone knows the author's email, can you send a suggestion?
How 'bout a "history" text file, so I can tell the difference between
versions 02 03 and 04 other than the digit in the archive name. While
this is not overly important in the grand scheme of things, it does
help one come up with a good description when uploaded to a BBS/service,
etc...

3003. Report on proTOS '94 in Ulm, Germany

Newsgroup: comp.sys.atari.st
Date: 1994-05-18 14:26:12 UTC
From: matija@sirius.ijs.si
Message-ID: <1994May18.142612.1102@cathy.ijs.si>
Source record: 187042

This fair was taking place in Ulm, Germany on April 22nd-24th. I wrote a report for AEO, but they already had one, so mine wasn't published. Because I feel my report includes more information than the one published in AEO, I have decided to post it on the net. I hope it helps someone.

A version of this file has also been posted on BIX.

Please, do not distribute this article without explicit permission from the author.

Undisputably, Germany is the most thriving atari market at the moment. A number of the most innovative products for the platform have originated there, and some of the most promising programmers orginate there. Therefore, Atari fairs in Germany are especialy interesting for all Atarians, wherever they may be. (Please not that all prices quoted are quoted form official catalogues, but I can't be held responsible for any mistakes. The exchange rate is approximated at 1.65 DEM/$ and may change with time).

Ulm is a city of approximately 100.000 population, located about 100 miles west of Munich. In the old days it became a local centre of commerce because it is the place where the Danube becomes navigable.

I traveled to the fair together with the Atari representative for Slovenia and a colegue from another computer magazine. I was sent to cover the fair by my magazine, Moj Mikro.

A lot of people who came to the fair work with both hardware and software, but there are some companies who concentrate on one or the other.

Although it was dealer's day and the ticket price was more than double the normal admission, all the stands were quite busy.

There were Falcons everywhere, only one stand had a mega ST, but several stands were using Medusa's. Every hardware producer worth his salt had a case for the falcon - from Eickman computer's box that is formed by simply replacing the top of the falcons case with another that makes it rectangular in shape and putting the keyboard into a an attached box to highly sophisticated tower designs with all sorts of bells and whistles.

The fair was really too big to see in one day, but I manage to talk to some very interesting people nevertheless. All dealers spoke at least passable english, or (the only exception) had people on hand who did.

The first man I spoke to was Bernd Lohrum, who published a CD with PD atari software he'd gleaned of various PD libraries, BBSs and other sources. His CD came out in december '93, just a week before Walnut Creek's CD came out.

I met with Acher, Eberl and Seribert who have a company with the same name. Their product, BlowUp needs no introduction. I was glad to be able to give them in person a copy of my magazine with my review of BlowUp in it. They were showing their own version of S/PDIF interface on the show - their interface works flawlessly with Cubase, but is cheaper. It should be available by the end of may. Their box also works flawlesly with some falcons (I quote "TOS >=4.04") for which the cubase interface doesn't. Their interface has been tested with cubase, audio, and digit II. They are also working on a patch for musicom.

Another product on show, but not yet on sale was a version of FalcoPhone a voice mailbox. Another product they are working on is BlowBoost: it is a way of raising the operating frequency of the Falcon to achieve better operating speed (and through greater bus throughput, better resolutions). On the stand they had a falcon operating completely at 20 MHz. According to them, while other components of the falcon, including the video processor and the 68030 are capable of working at frequencies much higher than the 16MHz they are clocked at, 20MHz is about as high as the blitter can go. You can't even turn it on, because the atari symbol drawn at boot time is drawn by the blitter. (However, these guys are clever, so I'm sure they'll think of something).

A software only product is GUT'NBERG, a speedo worprocessor with DTP abilities.

Omikron produce a spreadship called K-Spread which, among other things supports macros, GDOS and vector graphics. They also have aversion called K-Spread Light which at 99DEM ($60) sells for a bit more than a third of the price.
Their other two products are Omikron basic and Freeway, a database which supports limited SQL requsts. (I reviewed Freeway for the february issue of Moj Mikro). Omicron also produce software for IBM AS400, and the PC.

As of november last, Omicron had joined their marketing and software distribution effort with R.O.M. R.O.M. develop for OS/2, NextStep and the Atari. Their flagship is the word processor papyrus. While papyrus is able to use Signum! 2 fonts, it is really more at home with the speedo set. Indeed, R.O.M. are the official distributor for speedo 4.2 in Germany. Together with Omicron they are distributing Xact, a char preparation program which supports various 2D and 3D presentations of data, and Xact draw, a vector drawing program. They also have two versions of their CAD program CADANS. The cheaper version, at 499 DEM ($300) does not support DXF and comes without most of the support libraries. The proffesional version 998DEM ($600) comes with full DXF support and "many libraries".

Among their hardware products are heatseeker, a 198 DEM ($120) combination of hardware and driver software which makes it possible to connect an Atari SLM laser printer tothe SCSI port of the falcon. Heatseeker has it's own GDOS driver and supports speedo fonts.

Video master (with various verisons ranging from 198 DEM ($120) for the monochrome version to 349 DEM ($211) for the special falcon version. It enables the user to digitise single frames, 25 frames a second (in quater screen mode, and with digitised sound) or timed grabs (i.e. grab one frame every minute).

Other programs include Replay 16 (a 16 bit sound sampler for all ST/TT/F030 machines which connects to the ROM port), an address database called Pegasus, a paint program called TruePaint. They are also advertising Lattice C, HiSoft C, DevPac 3.1, DevPac DSP, Diamond Edge/Backup 3, Hisoft Basic 2.1 and ChemKit, a program for graphical management of chemical formulas as pixel (IMG) or vector graphics (GEM).

Across the passage from R.O.M. was the stand for PageDown computer, who are marketing another word processor, Script. Their representative insisted on showing me the review of their product in the German ST magazine- he insists his program can do everything the competition can do, and is more user friendly besides. The current version is 3.5 and can use Signum 2, Signum 3 and speedo fonts, but they hope to have version 4 ready by the end of the year.

Also on their stand was midnight, a user programmable screen-saver. It comes with a variety of amusing screen-saving routines, and any user who has Pure C can also very easily program his own. Their program uses AES and is therefore compatible with all atari computers.

Maxon computer entered the business in 1985, when they started publishing the magazine ST computer. Later they entered the software and hardware market, but they are currently concentrating on software and their magazine, which sells 60.000 copies every month. Their software product list read like a who's who of Atari's top ten utilities: Harlequin 3, Xboot III, Outside, Crazy Sounds, ACSpro and MultiTex. When I talked with their representative about the current status of the Atari market, he told me that the Atari market in Germany is very much oriented toward the serious user, and the games market is practicaly dead. Amiga is just the other way around: it is perceived as a games machine and not one for serious use. Maxon has had to shut down their Amiga magazine, Kickstart.

Digital Arts has certainly come to the Atari market with a bang, their program DA's vector is one of the most amazing pieces of vector drawing software I have ever seen. Digital Arts has been formed by programmers who left 3K Computerbild, where they programmed such legendary programs as Retouche and Didot. They are building on their success with DA's vector pro, DA's picture (a paint program), DA's Movie (a program for video editing, effects and processing). DA's photo contains special algorithms which enable the user to scale, process and print out photographs without disturbing Moire effects. DA's photo can be used as a standalone program or as a module for DA's layout, a DTP program which specializes for driving RIPs.

H3 is a dealer's dealer in Germany. They buy software and hardware products from the companies that produce them (they represent 150 companies with approx 700 products) and sell them exclusively to dealers. They offer various services on both sides of the bargain: They have one employee driving around Germany constantly to see their customers are satisfied, and they are able to handle marketing and presentation for their producers. They subisdized the faire booth space for a number of their customers and in handled on-faire sales of their software.

OHST software is a small company which exists from 1986 and sells hardware and software. They have their own Atari-specialised shop and they also sell by

mail. They have some of their own products, like The Big Font Collection, but mostly they represent producers like Hard & Soft, which offers SCSI tools, CD tools and such hardware additions as AT-BUS HD interface with integrated TOS 2.06, and speed resolution card, which increases the bus and CPU speed of the falcons.

Eickman computer sells both hardware and software (including an inexpensive case for a falcon). They also sell their own HD driver HDplus 6.0 (they claim theirs was the first non-Atari HD driver), a writer and reader for bar code, a driver which emulates Epson LQ for the atari lasers. They also market Tommysoft's drawing program Megapaint.

Because they support the whole Atari range, they also offer exterior floppy drives, serial and paralel interfaces and memory expansions for the portfolio.

MW electronic is one of the big names on the atari hardware market. It was started in 1990 by an electronics student Juergen Methfessel as a hobby. They mostly produce speeders for Atari computers: PAK 68/3 for the 68000 machines costs 555 DEM ($340) or 695 DEM ($421) completely built in. It adds a 68030 processor clocked at 33 MHz to your system. If you have a falcon, you must have heard of their speeder Mighty Sonic: It not only increases the speed the processor is operating at, it also adds fast (TT) memory. It sells for 699 DEM ($423).

MW electronic is also the german representative for the Medusa T-40, a TT clone produced in Switzerland. The medusa sports a 68040 processor clocked at 64Mhz with a modified TOS 3.06.

They also produce two very intersting programs which completely support the Falcon: E-Backup and E-Copy (a sector copy program).

The MW representative was most secretive when asked what they think of the Atari market: "If we see what we expect to see from Atari, we will stay in the market. Otherwise, we will have to think about it." Pressed further, he said that he is optimistic that they will see what they expect to see. Anybody who knows what they are talking about, please let me know - even of the record.

Compo Overscan has become famous when they started selling Overscan, a screen enhancer for the ST line. Today they have branched out all over the A/V marketplace: They produce a videodigitiser and a video titling system called Overscan. The demo at the faire included a proffesional mixing table and was little short of amazing.

Their audio digitiser Musicom 2.1 takes care of high quality sound processing and which can be used in conjunction with TrakCom, which has a built in sequencer and makes possible processing, transposing and playback of sampled sounds.

Their very promising falcon speeder Afterburner 040, is apparently not yet ready for prime time, but is supposed to feature a 68040 clocked at 33/66 MHz and up to 64 MB of fast ram.

The fair was just too big to really see in one day. I just glanced at Dynacadd and Heim Verlag's 99 DEM technobox drafter, and I am very sorry I didn't get a chanmce to talk to ComTex and PAM people. They both offer hardware and software which enables Ataris to use Novel networks. While Comtex seems to concentrate on Novell, PAM is more concerned with supporting everything than can come over ethernet, including Novell, Mac's and UNIX NFS. There was also a hardware Atari emulator for PC's called Janus, which is supposed to run quite a bit faster than the gemulator.

3004. [Q] Llamazap and [Q] SVGA on F030

Newsgroup: comp.sys.atari.st
Date: 1994-05-18 14:40:34 UTC
From: jhh@cwi.nl
Message-ID: <Cq063M.1Cy@cwi.nl>
Source record: 186969

I'v got two questions some of you might have an answer to
1. I copied Llamazap, and it seems to run, except that it doesn't say anywhere
how to control the program. So I'm stuck in this demo :-(
Which keys should I use? Or does it require a joystick or something?
2. I've got a SVGA connected to my Falcon, but it does flicker noticeably.
Is it possible to increase the screen frequency? Are there programs to
do so? And how can I make sure that I do not blow up my monitor?
Any answers are much appreciated.

It's still expanding GIFs, but not RAWs. If you convert your GIF with GIF2RAW
and then put the RAW through PhotoChrome, you'll get it centred on a nice
black background.

>
> BTW, none of the Targa files I have seem to display - all I get is a blank

>

I must admit, I could never get TGAs to work on version 3, and I haven't tried
on V4. Those that loaded at all always came out skewed, as if PhotoChrome had
got the line length wrong.

The subject says it all. That is unless the author has released a newer version. It is a fun game, especially if you are one of us who remember the old version that was in ASCII. Slightly different game but the same premise. I loved it, my brother in law who is a few years younger than me thought it was pointless. But then again he didn't like the Donkey Kong clone either ;)

|> on and the game hangs up. Then I have to push the reset button to start it new.
|> I'd like to buy the game, but I think it's too unIstable at the moment.
|> Is there a newer version which will run without hanging up?
|> What are your experiences on a MSTE with TOS 2.05?

I had a similar prob with the Cannon Fodder demo on my 1Mb STE.
The other levels end OK (usually with me getting killed), but the final
level would crash when all my men were dead.
I've only managed to do the 1st level (yes, I'm really that poor
at playing games), and level 4 was too scarey to play more than twice
anyway, so I don't know for certain if this is an intermittent problem
or not.
This article was useful, wasn't it?

Diamond Back 3 works perfectly on a Falcon(and devloped on the one
sitting to my left), and in fact is specifically enhanced with 3-d views
and full color icons etc.. Version 3.02 will be released today and a
patch program will be placed on Internet to upgrade either 3.00 or 3.01

Sincerely yours,

Bob Luneski

Hi!

I've uploaded OCR 1.25 (ocr125.lzh) to

atari.archive.umich.edu (atari/Applications/Other)
[a.a.u.e mirror sites: src.doc.ic.ac.uk or nic.switch.ch]
ftp.uni-kl.de (pub/atari/incoming in a few days: pub/atari/misc)
ftp.isbiel.ch (atari/diverses)
ftp.cnam.fr (pub/Atari/Text)

OCR 1.25 is an Optical Character Recognition program for
all ATARI ST/STE/TT/Falcon.

* Userinterface (RSC) in German, English and French.
* DOCs in German and English.
* OCR 1.25 is Freeware!

Regards
Alexander

Surely that's more to do with the capabilites of the PC than of the ST. :)

It'll probably still need an HD though.

Michael.

You need the new Atari `games controller' as seen on the Jaguar. It's one of
those horrid console type joypad things.

> 2. I've got a SVGA connected to my Falcon, but it does flicker noticeably.
> Is it possible to increase the screen frequency? Are there programs to
> do so? And how can I make sure that I do not blow up my monitor?

If you get hold of the BlowUp030 demo then you can increase the vertical refresh
rate, but only in _16 colour_ modes. It should be on most FTP servers. The program
has built in things that stop you feeding your SVGA monitor potentially nasty
frequencies.

Alternatively you could buy either BlowUp030 or Screenblaster and have the option
of expanded screens in all colour modes.

That's exactly where I would look if buying one now. I got mine via
an ad on Usenet, so look out in the appropriate groups for `for sale'
notices. Also try computer/electronic junk shops. A colleague of mine
got his tape drive dead cheap at a computer show. And got a TT-high
monitor for less than 30 quid (!) at a junk shop or somesuch.

See if you can get ahold of a Processor magazine (it is a newspaper-like
publication for computer repair and service personel). They always have a
bunch of refurb ads.

> have which use the DMA sound outputs or anything. Any ideas ??

This happens to me too (with both SC1224 and SC1435 monitors as well). I
took this as an indication of my having the "mono screen wrap/crackling DMA"
hardware bug. TOS 2.06 fixes the mono screen wrap portion, but still leaves
the DMA sound problem. The fix is to replace your GST shifter chip with
a revision 4 or later version. I have more information I can give you
on this. Also, there is a file called wrap_fix.arc (or similar) on
atari.archive.umich.edu in Ste/Mega that will tell you more about this.

Here is another test. Get the Brain Damage demo (really good demo, BTW),
and fire it up on your MegaSTE. When you get to the part where it asks you
for disk two, it plays a heartbeat sample over and over. On my machine,
it crackles like hell during this time. Again, another indication of the
DMA sound problem.

> Also, PT seems to be trying to extend the screen by removing the bottom border
> but this is intermitent, ie. it flicks on and off - is this "normal" ?

You are probably running your MegaSTE at 16mHz w/cache (this is a good thing).
This must screw up some overscan code to a degree, as I get the flicker as
well. The fix is simple: adjust the "NOOPs" counter to zero. This will
get rid of the flickering overscan portion of the screen. Be sure to save
your preferences before you quit.

Hey it's strange but it happens. I have an article that printed in my
local user group newsletter. It was from back in the days when several
prominent people were naying the idea of atari ever releasing another machine.
At that time a person from france who worked for a magazine there sent up a
list of stat's for the then unannounced (officially at least) Falcon, people
laughed at him, but interestingly enough it turned out to be almost exactly on
the money. So while I don't say this is the same story, and I don't think it
is the same author, you never know which rumour will turn out true.

> couldn't find a feaseable way to turn a profit off of exploring.

Well, I'm not sure whether wormholes are a "feature" in the game or just a slight "buglet" but they are very useful to jump huge distances very quickly. You really only need it if you've got a big lumbering ship. What you do is take advantage of the fact that every 655 light years the distance gets set to 0. Simply pick a planet here and jump to it and then select your original destination and do the same thing again.

Photographic missions are exciting the first few goes - like most of the missions so far, really. You have to fly to an uninhabited planet or moon (usually in an uninhabited system as well - so make sure you've got some spare fuel lying around) and find the secret base on it. Quite easy, this bit, as it's a white dot on the planet's surface. You then enter the atmosphere _manually_ and then trundle along at about 100m above the ground until you can see the base and then you have to get as close as possible to get a really good pic. The reason you fly so low is that the fighters etc all crash into the ground upon launch. The last thing you want is 6 fighters attacking you at the same time...

> Sounds like there is alot that I've yet to encounter :)

Certainly is, Daniel. I'm not sure that the ever-widening gaps between promotions is a particuarly good idea as you get fed up doing the same sort of thing all the time.. :P

I just tried it and got through without any problem, but maybe that has to do with the fact that I'm in Norway too. If it's the FTP list you're after, I have the complete list as I'm the one who's made it (Jon only has parts of it).
I'll put it on the site again now, so others who have missed it can get it.

Well an initial version of the TCPIP Faq (if you can really call it that) how about the Guide to Connecting your Atari to the Internet. At least a litle more accurate. ;) Well after some small amount of research and work I have come up with an initial version. I am certain that it does not contain everything it should, but I wanted to get it out for comments and suggestions. The current version is approx. 45K, I am going to send it to a.a.u.e., ftp.uni-kl.de, mic2.hensa.ac.uk and ftp.tu-clausthal.de. If you are unable to FTP then send me email and I will mail it to you.

Please feel free to make comments and suggestions. And pass it on to anyone who needs it.

- (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
---
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
uncompressing .Z and/or .uu.
Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
"low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
disk to computer. i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

Compiled by Hallvard Tangeraas, Oslo, Norway

Message-ID: <Cq0s6t.Esp@cix.compulink.co.uk>
Source record: 186989
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st.tech,comp.sys.atari.st

>PS. I wonder if not supporting TOS disks is really a mistake... Perhaps
> some kind soul could write ST File Exchange, or summat?

Well depending on how comapatible SMS2 is with QDOS - there is already at least one good ST/PC disk reader for it.

Anyway IMHO ST/PC disk compatibilty is a must, if only as a way of getting source code files on for recompilation. The underlying file system can be something else - however FWIK, the QDOS one is pretty poor comapared to MINIXFS or even TOSFS.

Roland.

Suggest you obtain a copy of Fetch to grab files around the Internet rather than working with a strict ftp transfer. Fetch will take care of the unBinHexing for you automatically. The only thing left for you to worry about on occasion is UnStuffing the converted file.

<sorry to quote entirely, but I couldn't find anything to cut>

Indeed. There is actually grounds for a rumour like this:

```
] ::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
] :: Volume 2 - Issue 19 ATARI EXPLORER ONLINE 7 November 1993 ::
] ::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::::
]
] ...
]
] By: Andreas Barbiero
]
] ...
]
] It is not impossible to see the GEMulator recompiled to run as a DOS
] program in a native mode on the MCP601, maybe even TOS could be
] converted in this way allowing for an Atari computer based on the
] MCP601 or even the big brother MCP604 chip. With a 64bit datapath and
] 32bit addressing, knowing how Atari places customized technologies in
] concert with each other, there may be a PowerPC based Atari machine
] based on the Falcon/Jaguar principle of combining such things as a DSP
] and digital codes to create a computer that can do far more than a
] single CPU could do alone, even with add on cards.

Volume 2 - Issue 20 ATARI EXPLORER ONLINE 23 November 1993

] COMDEX reacts to the Jaguar
] By: Albert Dayes
]
] There were also several IBM employees from the different divisions that
] were very interested in the Jaguar. Some from the PowerPC division were
] more interested in discussing the technical merits of the chip set.

] By: Al Fasoldt
]
```

] Because of its close relationship to Atari in the manufacturing
] phase, IBM has reportedly begun work on a way of incorporating the
] Jaguar's graphics power in an add-on device that could be used either
] in its standard personal computers or in the Power PCs that IBM, Apple
] and Motorola are creating.

Volume 3 - Issue 1 ATARI EXPLORER ONLINE 22 January 1994

In the `Second Annual AEO Readers' Survey Results':
] =-=
] //// What AEO Readers Would Like to See More Of
] =-=
] //// The new Power PC Falcon (grin... :-))

Volume 3 - Issue 3 ATARI EXPLORER ONLINE 22 February 1994

] By: Andreas Barbiero
] The Jaguar is catching the eye of the public, but the computers are
] still where Atari shines. With 68040 boards coming for the Falcon030,
] the announcement of an '040 TT clone, the TT030 accelerator, and the
] possibilities of the PowerPC chip, whether or not Atari produces a
] new machine, these new hardware products and software like the new
] Cubase Audio for the Falcon will continue to drive the TOS
] marketplace. So, please do yourself a favor and register shareware,
] buy some software, and make sure you read AEO!

Want more rumour material? Well, I think if you look carefully through old
Brodie transcripts, you'll find him mentioning the PowerPC & Atari.

Check it out people - this is a superb piece of software.

The user interface is very slick. In just a couple of minutes of use,
I had converted a random piece of scanned text into ASCII. The package
gets better as you use it - it learns fonts.

If your monitor can do 78Hz then you could try a PD program called
super78. Also, try the BlowUp and ScreenBlaster demos. They give you
higher res. I run at 880*656 68Hz.

>1) Where do I get an upgrade for TOS? How much will it cost? How long will
>I wait to get it? Can I install it myself?

There are a number of options, depending on your setup. You probably have TOS 1.0 in a 6-chip ROM set, and you can easily go to TOS 1.04 which is also available in a 6-chip set, as well as a 2-chip set. If you buy a 1.04 set with the "wrong" number of chips, you'll just have to reset 3 jumpers or so. In these old machines, the "jumpers" are more likely to be soldered "zerohm" resistors (plain wire in resistor packaging) so you should be comfortable with a soldering iron if you want to mess with this.

If you're going to go thru all the trouble of upgrading, you may want to get TOS 2.06 instead; it's much nicer overall but requires more work to install.
>
>2) What type of SIMMS do I use to upgrade the memory to 2 megs at least? Can
>I install this myself?

There are no SIMM sockets in the older STs, you'll need to buy some 3rd party board that lets you use SIMMs if you want to go this route. You probably have regular DRAM chips soldered on your board. You can desolder them, solder sockets in their place, and then plug in higher capacity DRAM chips. From 1 Meg you could go to 2, 2.5 or 4.
>
>3) Would it be cheaper to buy a used ST? What will work with Notator Logic?

Hard to say what would be cheaper. If you're looking to replace your machine, I'd look for an STe, which can be easily upgraded to TOS 2.06, and which already has SIMM slots inside.

[> (which I don't have) , Can anyone point me in the right
[> direction ?????

There are only a few "C" compilers that will work on a floppy system.
The best compiler available (for your situation) is the Sozobon 2.0
eXtended "C" compiler, by Jerry G. Geiger. It is available from
ftp.cs.tu-berlin.de in the /pub/atari/programming/ directory under
the files sozbin05.lzh, sozlib05.lzh, and sozutl02.lzh (or something
very close to these filenames). The compiler generates better code
than any other compiler that will work off a floppy disk (but not as
good as Pure C or Lattice C, which require a hard disk). It also has
many features that the other compilers based on Sozobon C do not have,
such as support for pre-compiled include files, profiling, prototypes,
and more. It is also much faster than Heat & Serve C or Sozobon C,
and is the only one of the Sozobon-strain compilers still being
actively developed. Most of the documentation is in German, but I'm
working with the author on converting it to english. It is very,
very, very easy to get started with this compiler, though. There
are english installation instructions. One of the best features of
this compiler is the optimizer; it is simply fantastic!

For some idea of what can be done with this compiler, check out
MasterBrowse. It was written/compiled with the newest version.
The executable generated by this compiler used 97K less memory
than the executable generated by the Heat & Serve C compiler.

For C++, you will not find one that will work on a floppy disk. The
only C++ compiler I know of (GNU) requires an obscene ammount of memory
and an ammount of disk space that will literally make your eyes pop
right out of your head.

I still find it odd that there is support for a non-TOS file system (Spectre GCR), yet no real support for MultiTOS file systems (Minixfs)!

If DB3 uses proper GEMDOS calls, it presumably backs up all the files with truncated filenames and no M-TOS permissions?

Message-ID: <2rf95f$a11@sun4.bham.ac.uk>
Source record: 186912

In a previous post, I wrote:

: BTW, none of the Targa files I have seem to display - all I get is a blank
: screen. It's possible that PChrome4 doesn't like whichever variant they've
: been stored in (most have been through Image Alchemy on my work PC at some
: point) - perhaps a different converter may do the trick.

I've been playing around with assorted Targa filetypes, and I think I've worked out what's happening - as far as I can make out PChrome4 doesn't like 8-bit Targa files, but is OK with 16- and 24-bit variants, although I've not tried the compressed variations of these yet. Once I'd got something, I tried a sub 320x200 file, which displayed perfectly. The files that didn't display, as it turns out, were originally GIF files and hence had been converted into the 8-bit form automatically by Image Alchemy, rather than the more usual 24-bit form.

: I saw a new ST emulator for PC in a German magazine (ST Computer)
: (amazing that the ST is so popular that there is a emulator market)

It is the JANUS from VHF-Computer. At the time I don't know the complete
address from the company. The board contains a 68000, 1 M-Byte RAM (expansion
is possible), TOS-2.06, has the ROM-port, ...

I heard, it works with window-3.1, one window for ST, other windows for
pc-programms. I heard also, that the company will build a 68030-JANUS
in the next future.

That's interesting. Most of the TGA files I've tried have been converted from
GIF or JPEG with GEMVIEW 2.24. GEMVIEW's default setting is to save in 255
colours, but I assumed that converting a 24-bit JPEG to Targa would preserve
the 24 bits. Obviously it's converting to an 8-bit palette.

This is unfortunately very much the way you will find things to be :
PC cases are much cheaper than cases designed for external harddisks 8(

It seems to be the 'economy of scale' monster rearing its ugly head again.

>>Any help/advice appreciated,

If you can find a secondhand external floppy housing, that will do the trick.
Alternatively, you should be able to get a small plastic box from any
halfway decent electronics supplier, and then scrounge for a powersupply.

If you've got CAD-3D or CyberSculpt, make one in there. Then, grab my cad3d2raw converter from the POV-Ray FTP site in Australia (*.uniwa.au) and run the 3d2 file through it. Then grab raw2pov18 (also on the POV-Ray site) and run the resulting RAW triangle file through it, with the -s option on for smooth triangles. Then render (at light speed on that Alpha).

Sorry I don't know the exact address of uniwa; browse comp.graphics.raytracing for a few minutes, you'll find it.

> POv really is rather nice on an Alpha :-) The basicvue scene takes a
> whole 3.5 secs to render :-)))

Gee, that's only TEN TIMES the speed of the '486-based multiprocessor machine at work...

If only NEXTSTEP ran on it.

3069. Atari CD-ROMs FAQ (Beta version)

Newsgroup: comp.sys.atari.st
Date: 1994-05-19 12:21:55 UTC
From: brarda@vxclia.cern.ch
Message-ID: <Cq1uCJ.C3B@news.cern.ch>
Source record: 186921

This is the first release of the Atari CD-ROM FAQ. It is like a beta
version with probably a lot of mistakes.
Feel free to mail me for all the errors you see (in the contents and also
in the form because I am French and the English language if no my first
one) or for other information that can be interesting.

Loic

ATARI CD-ROM FAQ
----

1 - What driver should I use with my Atari system ?

There are several drivers available :

MetaDos :
Free software from Atari Corp.
Available from atari.archive.umich or ftp.muenster.de (metads23.zip)

The filesystem drivers support ISO9660 and High Sierra CDs, but not
multisession CDs.
The device driver only works for the Atari CDAR504 connected to the
ACSI bus or with generic SCSI CD-ROMs connected to the TT SCSI port.
(Answer from Julian Reschke)

CDROM.XFS :
Free software (Copyright 1992,1993,1994 Eric R. Smith, Michael Bernards
u. Gunther Leis)
Available from atari.archive.umich and other ftp sites.

This driver is a Mint extended filesystem and works on TTs and Falcons.
CDROM.XFS version <0.7 does not work with Mint/Multitos > 1.04.
The current version (0.7) is said to work on Mint/Mltitos > 1.04.
It seems to be true on TTs but it does not work with any Mint version
on my Falcon.

CD-Tools :
Commercial solution from Hard & Soft, Obere Muensterstrasse 33-35,
D-44575 Castrop-Rauxel, Germany, Phone: ++49 2305 18014, Fax: ++49 2305
32463

Includes MetaDOS with GEM-based installation program, audio player with
PCM audio data import (only some drives) and custom devices and
filesystem drivers (support for Atari CDAR504 and generic CD-ROMs
connected to ACSI through host adapter, TT-SCSI, Falcon-SCSI,
multisession support (only some drives)).

(Answer from Julian Reschke)

With CD-Tools, you also have a GDPS module and the program Scan-It that can handle Photo-CD Pictures.
CD-Tools is in German and costs 99 DM.

ExtenDOS v1.1:
Commercial solution from Anodyne Software, 6 Cobbler Court, Ottawa, Ontario K1V 0B8, Canada.

Support ST, STe, Mega, TT, and Falcon. Read ISO9660 CD-ROMs. Run under TOS normally and under Multitos as long as memory protection is turned off but it is impossible to run programs directly from a CD under Multitos.
Extendos v1.1 costs $19.95.

ICD Pro :
Old versions came with a MetaDOS driver named ICDCDROM.BOS.
The new ones comes with a mint extended filesystem.

2 - What discs are available ?

There is three Atari specific CD-ROMs :

GEMini CD-ROM :
From Walnut Creek CDROM, Suite 260, 1547 Palos Verdes Mall, Walnut Creek, CA 9496, USA, Phone: +1 510 674-0783, Fax: +1 510 674-0821, Email: info@cdrom.com, Ftp: ftp.cdrom.com
Available in Germany from Ingenieurburo Praefcke, Holtzvogtkamp 55, 24220 Flintbeck, Phone: (04347) 7531.

You can find the index of the GEMini CD-ROM on atari.archive.umich.edu.

Bernd Lohrum CD-ROM :
From Bernd Lohrum, Schlossbergstrasse 36, D-66440 Blieskastel, Germany, Phone: (0171) 4210222

This CD-ROM costs 69 DM (59 DM for MAUS net users).

Wohlfahrtstatter CD-ROM :
From Wohlfahrtstatter, Irenenstr. 76c, D-40468 Dusseldorf, Germany, Phone: (0211)429876.
This CD-ROM costs 89 DM.

You can also use all the ISO-9660 CDs that exists for the PCs. You won't run the PC programs but you will access all the text, pictures, and sound files on it.
The discs already tried are :

Corel Artshow 91 :
~ 1000 scans of paintings (like Manet, Van Gogh, ...) in 16 and 256 colors PCX files;
All the images from the 91 Corel draw contest in CDR and DIB format;
some midi files.

The PCX and DIB files can be read with Dieter Fiebelkorn's Gem-View 3.xx .

Clipart Warehouse

3 - Can I use Photo-CD on my Atari ?

Of course You can !
To have full use of the photo-cds, you'll need a multi-sessions drive and driver and also a program that can handle PCD files.

CD-TOOLS :
The driver from Hard & Soft can read multi-sessions discs and have all the needed stuff to handle the Photo-CDs.

ColorDisc PCD
Commercial software from Color Concept, Im Alten Breidt 4, D-53797 Lohmar Breidt, Germany, Phone: (02246) 7132

This program allows you to manipulate the photos on your Photo-CDs, and save them on hard-disc. It handles Portfolio CDs.
If my understanding is good, it works with metados and a special BOS file (both included).
It also includes a CD-Audio player.

ColorDisc PCD works on TTs and Falcons and costs 99 DM.

Studio Photo :
Commercial software from Eurosoft.
This french program can manipulate Photo-CDs.

4 - Can I play Audio-CDs on my Atari ?

Of course You can !

The following programs are available :

CD-TOOLS :
The driver from Hard & Soft includes a player for CD-Audio discs. The drive must understand SCSI2 instructions.

ColorDisc PCD :
It also includes an audio Player.

Audio CD Master 3.0 :
Commercial software from It's All Relative Software, 2233 Keeven Lane, Florissant, MO 63031, USA.

This program can play CD-Audio discs on SCSI2 and Nec drives. On falcon and with some drives, it allows you to control and pipe your CD audio sound into the Falcon for DSP effects using software like the Audio Fun Machine that comes with your Falcon 030.

Audio CD Master 3.0 costs $29.99 US, postpaid, worldwide.

Audio CD player 2.0 :
Older shareware version of Audio CD Master 3.0 from Nina Montaser, P.O. Box 52127, Ottawa, Ont. K1N 5S0, Canada

Does not work on my falcon

5 - Appendix A

These are some users configurations :

TT, MultiTOS 1.04, CDROM.XFS
TT, MultiTOS 1.08/9, CDROM.XFS v.0.7
TT, MetaDOS

These do not work:

TT, MultiTOS 1.08/9, CDROM.XFS < 0.7
TT, MultiTOS, MetaDOS

Drive : NEC Multispin, external (84-1).

Discs : GEMini Atari CD ROM from Walnut Creek
Clipart Warehouse

MSTE -> ICD MicroSCSI -> ICD AdSCSI+ -> NEC CDR-37
but the first host adapter in the chain has nothing to do with driving the CD-ROM, its for a hard disk. The AdSCSI+ also has a hard disk running from it as well as the CD-ROM

Drive : NEC CDR-37

Software :

ICDCDZ2.XFS as supplied on the ICD Pro utilities disk. This only seems to work under MiNT <= 1.04. None of the other freely available CD-ROM drivers (MetaDOS etc.) seem to work. I haven't tried Extendos or CD-Tools.

For audio playing, I'm using Nima Montasser's 'Audio CD Master 3v0'. This is the commercial release of the AUD_CD20.ACC audio CD player. Both work fairly well for me, but I haven't got all the features to work yet.

In order to CD Player configuration to work (the default NEC CDR-37 one didn't work! with AUD_CD20.ACC) I contacted NEC(UK). They very kindly sent me a copy of their 'SCSI 1 Spec' free of charge. This is a 90 page photocopied document which lists all the SCSI 1 commands for a CD-ROM and what they do. I'm sure its pretty out of dte now, especially as NEC must be onto SCSI 2 by now.
I used the SCSI.PRG from the ICD Pro disk to send SCSI commands to the CD-ROM to get the combination right.

Atari Falcon030, 4MB RAM, 127MB Internal IDE drive, 270MB external SCSI drive, Viper 105S Tape Streamer.

Drive : NEC 2xi

Non-working drivers: MetaDOS 2.3 (no BOS drivers for Falcon).
ICD Pro Utilities (didn't see the drive at all).
Atari CDROM driver, v0.6 (gave read errors).

Working drivers : ExtenDOS v1.11 (commercial, available in the UK from
Systems Solutions, price about 30 pounds).

Discs : Gemini Atari CD-ROM.
Cover disk from a PC CD-ROM magazine. The files read OK, but obviously
the PC-specific executables do not run. I got loads of TIF pictures etc
off of this disk.
The NEC 2xi is about the same price as an Apple CD300 (160 pounds + VAT).
But people seem to have had less hassle getting the Apple drive running.
I chose the NEC because is an internal drive, so slotted into my
mini-tower comfortably.

Thanks to all the users that mailed me their experience.

>MINIXFS or even TOSFS.

In this months ST Review there is a review of all currently availably mtasking
systems; Mag!X, Geneva, MTos, SMS2, and Omen.

SMS2 got a nice review, so check it out.
They said TOS disk compatability may be a future update...

3073. MIST atari fest

Newsgroup: comp.sys.atari.st
Date: 1994-05-19 14:58:40 UTC
From: Paul Purdom <pwp@cs.indiana.edu>
Message-ID: <1994May19.145846.13754@news.cs.indiana.edu>
Source record: 186926

MIST AtariFest VI:
Saturday, July 23, 1994, at Indianapolis, Indiana
Best Western Waterfront Plaza Hotel
on U.S. 136 off Interstate 465 (Speedway Exit)

Mid-Indiana ST Atari Users Group announces its 6th annual MIST AtariFest will be Saturday, July 23, at the same northwest Indianapolis hotel as last year.

Commodore Amiga users also are invited to take part in swaps, sales and trades at MIST AtariFest VI -- one of the first "computer fests" since the Commodore company announced plans for liquidation.

MIST AtariFest VI begins at 10am Indiana and Illinois Time (11am for Ohio, Michigan and Kentucky visitors), and continues until 3pm (4pm EDT).

MIST is comprised of three central Indiana Atari groups:
* ASCII (Atari ST Computers in Indianapolis)
* BL.A.ST (Bloomington Atari ST)
* PAUG (Purdue Atari User Group)

All Atari computer users -- 8-bit as well as 16/32 ST and 32/32 TT -- are welcome to attend and/or put out equipment, software, etc., for sale, trade or swap. Commodore Amiga users also are invited (C=64 users won't be turned away).

Table space that has been reserved AND PAID by July 8 is only $50 for commercial vendors/developers; $15 for user groups plus ticket fees for each person. Add $10 a table if paid after July 8. Solo tables: $10, space permitting.

Mail reservations and checks to: MIST AtariFest
c/o Charlie Sears
551 Mooreland Dr,
New Whiteland, IN 46184

Location is the Best Western Waterfront Plaza Hotel on Ind. 136, just minutes north of the Indianapolis International Airport (complimentary transportation from the airport). If driving, exit at "Speedway" from Interstate 465, the "ring" road around Indianapolis. Special AtariFest rates for rooms are $53 single, $59 double. Special facilities are available for the handicapped, for non-smokers, and for guests with small children. For room reservations, call Best Western national number 800-528-1234 or 317/299-8400

x393. Mention the MIST AtariFest VI to get special rates
(or "ASCII Atari Computer Show" if "MIST 'Fest" doesn't the
ring the reservations desk's bell).

On behalf of the usergroup, "Atari Users Of Norway", I've already accepted to take shareware registrations from abroad with Visa, Accept, EuroCard or MasterCard for one of our members. It was in fact VERY easy for the usergroup/PD library to get the permission to take payment by creditcards.

I would like to offer the same service to programmers from other parts of the world as well.

I'm doing this for free, I'll just have to cover my expenses for transfering the money to the programmer + the creditcard company will take another 2-3% of the amount transfered.

I was really surprised to hear the expenses operating Visa or other credit cards in the US. The total cost for me starting up with both Visa and Mastercard (incl.EuroCard and Access) was apx. $30.- here in Norway, and that's just the deposit for the card machine!!! In addition comes the 2-3% the credit card takes for the handling of each order.

I'm also willing to mail manuals and registered programversions if, let's say american programmers want me to do so for Europe. Contact me, and we can discuss the details.

TOAD COMPUTERS: TAPE BACKUP SYSTEMS NOW AVAILABLE!
COREL PHOTO CD DISCS AVAILABLE!

In conjunction with Oregon Research's release of their new DIAMOND BACK 3 hard disk backup package, Toad Computers is proud to announce the availability of several Tape Backup storage systems! These have been tested with Diamond Back 3 and all work great!

ToadTape 250MB Drive $379 Internal $449 External

The ToadTape 250MB drive is great for most home computer users with total hard drive capacity of 500MB or less. Use with either 250MB or 150MB cartridges to back up your entire hard drive system! Diamond Back 3 has built in file compression, increasing the capacity of 150MB cartridges to 300MB and 250MB cartridges to 500MB!

This Conner drive has a 1 year warranty and works with industry standard DC6250 ($22) and DC6150 ($18) tape cartridges.

ToadTape 525MB Drive $499 Internal $569 External

The ToadTape 525MB drive uses 525, 250, and 150MB 1/4" tapes to reach capacities of over 1GB (with Diamond Back 3's compression!) This drive works great with Diamond Back 3. We used it last night to backup a 1GB hard disk with over 700MB of data on it, all in UNDER ONE HOUR! That's right, we backed up 700MB of data (including compression) in under one hour!

This Conner drive has a 1 year warranty and works with industry standard DC6525 ($27), DC6250 ($22) and DC6150 ($18) tape cartridges.

ToadTape 2GB $869 Internal $949 External

The ToadTape 2GB drive uses DAT (Digital Audio Tape) technology to quickly backup up to 4GB of data. It's a very fast drive and is based on the Hewlett Packard 2GB mechanism! This is a great deal! Get a tape backup drive capable of servicing your storage needs _well_ into the future!

Call for pricing on DAT cassettes.

HOW DOES IT WORK?

Tape Backup drives have been available for the Atari for years, but with Diamond Back 3 it becomes easy and affordable to back up your hard drive using streaming tape technology.

Simply specify a set of files (this could be anything from a file to a folder to a partition to multiple partitions across multiple hard drives) and tell Diamond Back 3 to put them onto the tape! It will do the whole thing quickly and efficiently. Just sit back and watch, or leave the room and do something else!

In a few minutes, your entire hard drive can be backed up onto a convenient, inexpensive 1/4" data cartridge or DAT.

When you want to restore files off the tape, Diamond Back 3 keeps a "backup log" of what files were written to the tape. Just choose which files you want to restore (you can restore the entire thing if you desire, or restore it to a different hard drive) and click on

"Restore." Again the whole process is handled by Diamond Back 3. All you have to do is watch!

WHAT DO YOU NEED?

ToadTape drives work with standard ST host adapters (ICD, ICD Link, Supra), with TT030 SCSI, and with Falcon SCSI. All you need is the appropriate cable. Internal drives may be installed into your existing case if you have room. External drives come in our famous ToadStor case and fit neatly onto other drives or underneath your monitor. The 250/525 drives are 5.25" half height form factor -- the 2GB DAT (and 8GB DAT which is also available) are 3.5" half height form factor.

Drive prices above do not include tape cartridges. Just choose what size you want to get and you're ready to go!

Lastly, you'll need Diamond Back 3, which is in stock for an amazing $59.00! Just $59 to get the best hard drive backup software for the Atari!

Diamond Back 3 (which follows on to the much acclaimed Diamond Back 2) adds lots of new features including, of course, tape backup support. But it also features a completely redesigned user interface (with heirarchical file structures graphically represented) and 3D, color icons on standard ST's! It's fun to use because it looks so cool!

So, to place your order, CALL us at Toad Computers TOADAY (or send e-mail to TOAD@genie.geis.com)! Get your tape drive, your tapes, and Diamond Back 3! It's all ready to be shipped to you!

And if you order before May 30, 1994, you'll get a SPECIAL free bonus! But be sure to mention this electronic ad -- you won't get it otherwise!

3084. Survey of GNU C++ Users

Newsgroup: comp.sys.atari.st
Date: 1994-05-19 22:31:08 UTC
From: gregk@nskernel.tandem.com
Message-ID: <Cq2MK1.4C3@tandem.com>
Source record: 186938

Hi All,

Since I have just recently set myself up with the GNU C++ compiler, I was wondering what environments people were using to run GNU C++.

I would like to collect the information and then publish it in one message, rather than flooding the newsgroup with replies. So...any GNU C++ users (C++ only please) could you please answer the following questionnaire and send the response directly to me? The examples in parenthesis are my setup.

1. System type (eg. 1040STfm)?
2. Memory (eg. 4Mb)?
3. CPU speed? (eg. 8MHz)?
4. Hardware CPU accelerator (eg. none)?
5. Disc capacity (eg. 30Mb - yes I need to upgrade)?
6. TOS version (eg. 1.4)?
7. OS Environment (eg. TOS)? others: MiNT, MultiTOS, Minix, any others?
8. Shell (eg. Gulam)?
9. Editor (eg. Gulam microEmacs)?
10. Anything else you think is relevant, comments, etc...

Thanks for your participation.

>Spencer

If the Drive is not automatically identified on boot up, then one of two things is occuring. 1) Your SCSI chain is improperly or inconsistantly terminated and the Inquiry command is timing out(as are all other communication with the drive) or 2) The process of powering on has left one or more devices in a bus arbitration phase from which it never recovers.

We have seen this occur on several Falcons attached to either Archive Vipers or WangDAT. If this occurs on your Falcon then check your termination, make sure that the resistors are seated properly and in good shape, turn on termination power jumpers if your drive provides them. Then turn the components on in sequence first the tape drive and then the Falcon. The drive should be recognized normally.

BTW For the person who asked it, the 3.02 patch mainly fixes cosmetic buglets, but also has some tape driver modifications.

Read it again - it merely says IF the program is incomprehensible THEN
it is because of a lack of one of those items.

It does NOT say: IF any of these items is missing THEN <something bad>.

All those are are valid items, to be individually considered by anyone
programming in any language who finds their software becomes unmanageable.

Well, not anymore I don't, as you apparently need a Jaguar-console or similar
to play it. And I got it from ftp.cnam.fr. This seemed to me to be a reasonable
standard ftp-site (I love their WWW interface). If the copy is illegal,
complain to them, not me.

3094. Graphics formats (sprites)

Newsgroup: comp.sys.atari.st
Date: 1994-05-20 08:43:36 UTC
From: kllove@hellcat.ecn.uoknor.edu
Message-ID: <2rht7o$bvk@constellation.ecn.uoknor.edu>
Source record: 186567

I'm looking for a file describing the various file formats for graphics (e.g. NEO, PI?, SPC, etc.). I'm also looking for pre-written routines, in C, to load/save/display any particular formats.

In particular, I'm looking for PCX and/or BMP formats and/or routines. To be even more particular, I'm looking for routines for sprite manipulation (via software, of course) and the file formats to store them in.

I've got an MS-DOS book called "Flights of Fantasy" that is explaining the details of writing a flight simulator (and a few other things) fairly well (I guess). In this book the author gives a C struct for the PCX header (and a class to load and display a limited version -- 256 color VGA 320x240 image -- of the file format). However, it ignores some of the more interesting (IMO) fields like bitplanes (whatever they are), palette type, version, and a number of others. The author states, ". . . we'll make little use of the PCX header . . . Most of the members of this structure are irrelevant for our purposes".

Unfortunately for me, what the author seems to think are useless, I find quite interesting.

adTHANKSvance,
Kenneth Love

3095. Re: FSP for MiNT now available

Roland Givan (rgivan@cix.compulink.co.uk) wrote:
: >moved my fsp-client for MiNT from the "incoming" to a public accessable

: Sorry to sound so dense - but would anybody care to hint what an
: 'fsp-client' does?

Well, now as MiNT-Net 0.4 has been released, i think standard ftp, telnet
rlogin and a lot more will probably be available in the near future.
Anyway, fsp is an UDP-based ftp. As you probably know, MiNT-Net versions < 0.4
did not support TCP. For that reason, i compiled fsp to have a better
client than tftp for transferring files. First, it is a lot like ftp
which means you're in a "well known enviroment", second it has the advantage
that it is a "connectionless", because UDP-based, protocol. Unfortunately
that does also mean, Transferrates will probably be a bit slower
compared to ftp. Anyway, i already transferred a lot of files using fsp
without any problem. For a list of sites, which support FSP finger to
"bode@charro.ualberta.ca" (hmm..., hope that's the correct address).

BTW: There is also a group called "alt.comp.fsp" ....

rmccall@mcs.dundee.ac.uk (Rod McCall) writes:

>I have heard of this "Calamus" thing, but what does it do?

>My potential system is a FALCON 030 4/65.

Calamus is a desk top publishing system, offering the best DTP environment you can get on an Atari, and one of the best on any computer.

There are three versions.

Calamus 1.09n The original, mono-only package.

Calamus SL Rewritten, modular, full-colour pro package

Calamus S Basically SL, without colour seperation functions and some of the modules.

Check out the Calamus web page if you have www access.

address is http://web.city.ac.uk/~cb170/calamus.html

Calamus SL on a falcon gives you a full colour, pro DTP system that can easily keep up with the big boys.

SL normally costs about 500 pounds, but through ST Review magazine you can get it for only 200 pounds! A definate bargain.

>read about it has been in 'QL World' magazine.

>Assuming this is the case (and flame if I'm mixed up somewhere ;-)

>> What programming languages exist- LBASIC was mentioned, is there
>>a version of C in the pipeline?

I have ported Xlisp, xscheme and scm(another scheme), other folks
ported REXX awk, ...
Porting this stuff was realy easy with the c68 compiler
(easier than from unixV to BSD or vice versa)

>There is a fairly good C compiler for the QL, but nothing that gets
>anywhere close to GNU C or Lattice C

I must definitely flame this, c68 available for QDOS and SMS2
is very small (.i -> .s phase about 110K) full K&R and ANSI
and some extras (printf format string checking ....)
AND FULL sources and extensive libraries(curses,regexp ....).
AND FREE
AND ALL relevant GNU utils ported(except gdb, this is a real
drawback)

The library makes great effort to make porting unix programs
easy, only differences are in fork/exec and this is much more
comprehensive under QDOS/SMS2 than unix.

Xwindows is not ported, nobody attempted to make it work with
a QL (<2Mbytes in the vast majority).
Otherwise it should not be a problem.

The provided window system is very easy and extremely effective
to use - makes intelligent use of the keyboard, pointer/window
placing strategies etc..
There is already a quantity of programs from the QL which use
this window manager and there are programs to generate
GUIs (not an trivial task under SMS2 or QDOS).

>> How similar to Unix is the multitasking?

c68 libs make it appear very similar, otherwise very different,
extremely fast job-switch (about 0x68 bytes context information
under QDOS)

>Not particularly. MiNT is closer IMHO

>> Does it support the standard ST/PC disk format (for floppy and

at least flopies, easy to use

>> PD software was mentioned- how much is there, and where could I

>Well I assume they mean the *vast* quantity of QL PD ;-) There is not
>really a lot out there.

>> What is it like to use on a 1mb floppy drive system?

>Should be very good. Its a lot more compact than TOS.

I use QDOS with 1 720K floppy, it is excellent except for use with
the c68 compiler which already claims most of this 720K
(cpp,c68,as68,includes,libs,make ....)
But I can setup dynamic ramdisks and that makes it work.

>IMHO don't bother. I've had a bit of experience of standard QL QDOS
>(which as I said I *believe* SMS2 to be an enchanced port off, and in most
>ways it has no advantages over TOS/MiNT or MINIX. Its only advantage would
>be its compactness and efficiency.

some advantage is the THING system.
A THING is an named block of memory - or object, depending
how modern you like to view it.

THINGS may contain system extension, executable code,
shared data or something else and may provide their
own init,cleanup etc routines.
Extensions in things may also use a very sophisticated
parameter description/checking

This provides fairly sophisticated and fast job communication
without such overhead as with REXX or similar.

In my view the biggest difference between QDOS and SMS2
on the one hand and UNIX,MINIX,MINT on the other side is
the resident program concept of QDOS/SMS2, that means
shared code of program instances, but also requires
reentrancy of the programs.
Since the THING system it is easy to manage your
resident programs.

A drawback of QDOS/SMS2 is that they are best programmed
in assembler,basic or prolog, the c compiler has difficulties
with reentrancy.

Bye Richard

I remember there was some talk about a way to make vanilla Atari hard disk utilities scan all SCSI IDs on startup. I didn't realize at the time how useful that could be, but I realize it now. Please, someone-tell me how it's done. I want the option of connecting an external SCSI drive to either a machine that already has an internal one (a STacy) or to a machine that doesn't.

This gets real simple if I can somehow leave the external drive as SCSI 1 all the time, while the STacy disk is SCSI 0.

Has anyone checked out the use of American Express Travelers Cheques?

I had a pleasant conversation with someone at a local travel agency about the cost (1% of the total purchased, $250 is, I believe, the minimal purchase...) and the fact that they are cashable at any American Express office in Europe.

Sure, it might be a bit expensive to get $250 worth of cheques to pay a $20 shareware fee, but you can always use the remaining cheques (or cash them in...)

The cheques have a 'pay to' line, and signature authorization. Not exactly like sending money in an envelope, I would think.

Just a thought.

Yeah, they work real well. But ... the minimum denomination is $20US.
So if the shareware author wants $10US or $15US, you still pay $20US.
Or if they want $25US, you pay $40US. If it's worth it to you, go for
it!

BTW, some institutions (like AAA) offer free American Express
travelers cheques to members.

3107. Booting from Floppy disk with HD connected

Newsgroup: comp.sys.atari.st
Date: 1994-05-20 17:04:05 UTC
From: zcgbbac@ucl.ac.uk
Message-ID: <1994May20.170405.30606@ucl.ac.uk>
Source record: 186854

I have a Gasteiner Hard Drive that I bought a couple of months ago.

There is a Quantum 170MB unit inside. I am pleased with it but I have a small problem.

How do I boot up from a floppy disk now? If I boot up with the hard drive on and a floppy in drive a: the hard disk boots anyway. If I boot up with the hard drive turned off the system starts incorrectly whether there is a disk in drive A: or not. The only way seems to be to unplug the hard drive from the computer and boot from a floppy disk in drive a:

There must be a way to bypass the hard drive on boot up.

Any suggestions?

Thanks,

Bruce C.
b.cotsell@ucl.ac.uk

I coulda sworn someone on GEnie mentioned getting one, so I don't think it's vaporware. I don't have any more info at the moment, but if I can track down some messages on GEnie about it, I will capture them and post them (hope they don't mind :-)

Look for a file called "strip.lzh" or similar at atari.archive.umich.edu
(and mirrors) in the Telecomm directory - I believe this is a
monochrome-only RIP terminal program (due to the minimum resolution
required for RIP). I haven't messed with it much as I don't call
RIP BBS's, but it does exist...

While I will freely admit the C68 is a good C compiler, and IMHO has
done more for the revitalisation of the QL scene than anything else
recently - I *still* don't think its as good as GCC with decent MiNT libs.

This is based on trying to port several programs using it, which had
previously been ported with GCC to an ST.

Its alot better than some of the original QL compilers though.

Roland.

Indeed it will. This applies across the board with TOS version from 1.0 up.
If you get yorself a TOS upgrade from TOS 1.4 onwards, then the ST has full
disk compatibility with messy-dos.

The early TOS' didn't set the media-descriptor byte properly and the PC
just moaned and refused to play ball (like a lot of t#other things PC's do)

Cheers, Martin.

3128. ST Format issue 59

Newsgroup: comp.sys.atari.st
Date: 1994-05-21 04:28:50 UTC
From: Graham.Irvine@mettav.royle.org
Message-ID: <769487670.0@mettav.royle>
Source record: 186879

It was none other than Mark King that wrote on 16 May 94 that ,

MK> much cr*p By the end of reading it i have hardly gained any info. So
MK> who does think STF is any good , reasons please !!

I do ...

Market presence for Atari .Often the only Atari Mag in the average newsagent in a sea of PC fodder .

This lead's to quite a few other point's ,higher profile for advertiser's thus better return ,better sales ,more product's ...and so on. (every little helps !)

Quality (of print) ...and not neccesarily content is superior to any other Atari magazine IMO

Accepting the Target audiences of this magazine the standard of journalism is good and also the range of product's covered is as extensive as any of it's competitor's.Sometimes I appreaciate a simple here is a program and this is what it does type of review and if I want a 5 page rundown of every feature and quirk (Not that there is anything wrong with that of course !) well then I can pick up STR or STA (or even STU) .You can fault the content but not the style.

They do get some good exclusives ,I recall an Interview with Dave Braben recently which I enjoyed .

Generally the Coverdisk's have good content and some pretty good exclusives aswell occassionally.

to name but a few reason's ...

Now it may be I'll get flamed to bit's for all this but whilst I don't argue that in my 'serious computer user mode' I plum for STreview or ST application's every time . For a nice bit of light but often informative reading I'd pick up ST Format ,in term's of layout and form it is IMO superior .

The 4 ST mag's I subscribe to ,whilst none are mutually exclusive by any mean's ,are sufficiently distinct to ensure that I continue to do so and enjoy them all on there own merits.

Maybe it's a by product of the demise of Commodore that all of a sudden everyone want to start a 'My Atari Magazine is better than your Atari Magazine debate' <grin> .... equally futile of course .

It was none other than Daniel D that wrote on 14 May 94 that ,

DD> just announced so it's probably going to be at least 6months if not
DD> longer before you see the signum cards shipping. Also the signum
DD> cards won't handle
DD> cartridges (unless I've been sorryfully misinformed). The next
DD> question will
DD> be how good of a motherboard you will need to get real performance
DD> out of the
DD> card. Also what will the cost be? If it is the same price as a
DD> normal Jag where's the incentive to purchase one unless you already
DD> have a really nice 486
DD> sitting around your house.

There's no denying any of this but from the perspective of a long term Atari computer user what am I (Us) to infer from the fact that the mother company is about to license there technology for the use in a 'competitor's' machine without also at least offering to make it available to there own user's either in the form above or more likely as a JAG based computer, even on a subcontracted basis like sigma's deal.

Early day's I suppose and of course perhap's someone will take up an option with Atari to produce one for the Medusa for example !

DD> smart move. I just don't think that they will be a factor in the
DD> purchase of a
DD> Jaguar until probably 4th quarter 94 at best.

Smart move I agree but I am not that concerned on the effect's on Jaguar sales but more on TOS machine sales !

Well, if we make a good backup there will be no danger ;-)) Is there a
possebillety to hatch the patch (if allowed) into the net ?

3138. Free Issue to The Videogame Trader

Newsgroup: comp.sys.atari.st
Date: 1994-05-21 14:15:38 UTC
From: ap748@cleveland.Freenet.Edu
Message-ID: <2rl52a$re7@usenet.INS.CWRU.Edu>
Source record: 186888

The Videogame Trader

Jerry Greiner has stopped publishing The Videogame Trader.
I, Fred Horvat have taken over publication. The Videogame
Trader is open to anything videogame buying, selling or trading.
This covers handhelds, Pong style systems, coin-ops, regular
console system, cartridges both classic and current systems.
The first monthly publication will be June 15, 1994. The first
issue is FREE to anyone who E-mails or mails me and tells me
they want a free issue.

Why have The Videogame Trader if you can wheel and deal on
the Internet or other BBS's? Very good question, believe it or
not everyone who collects and trades videogames has a modem let
alone a computer, and those that do not have access to the
Internet or even know how to use the modem. So we have a
printed medium that gets the non-modeming collectors
communicating with other collectors.
Like stated earlier the June 15th issue is free for all to
take a look at. Just E-mail or mail me your name and address
and I'll get a copy out to you. Current subscribers June 15th
issue is also free that issue won't count towards remaining
issues.

Bart Schuller has a port of Lynx (the text-only WWW browser) running on
top of MiNT 1.10 and MiNT-net 0.30 over a SLIP connection... this isn't
exactly something for "users" though, since you'll have to compile your
own MiNT 1.10.

If any of you haven't tried SimAnt with Spectre GCR (3.0) - just thought I would let you know the monochrome version works fine. One small (maybe a pun - but who knows for sure) problem we did encounter in playing it (about 10 hours on it) was that twice we had the system freeze up. Not sure if that was from too much mouse activity leading up to the freeze or what. Pretty enjoyable if you are looking for something new to fill in the time until 3.1 or 4.0 arrives.

BTW, picked the game up off the net for $15 in the mac sales group.

The caTTamaran was described in Current Notes magazine as a small
board that solders onto the TT motherboard. It requires some trace
cutting if I remember correctly. It boosts the clock speed to 40 or
48 MHz. It is being made by a Canadian firm. I don't know whether it
is available yet.

Please, note that after version 6.5.1 (ICD is up to version 6.5.5 time of this posting) the default to disable can be user set. I set mine to match the newer TOS 3.06 of 'ALT' key.

My own experience with the TT030 is that to stop any information to be read into the RAM, it is neccessary to turn the machine on by on/off switch. Next, press the space bar to prevent medium rez default and RAM info writes. Quickly, press the ALT key.

Works for me!

>By the way, is there a version available that works on a 1040STe?

The only ones I know off are the ICDCDZ2.XFS drivers supplied by ICD on their Pro disks. If you are going to spend money on a driver, Extendados is probably a better bet.

I haven't found a freeware driver thats works with an ordinary ST and non Atari CD-ROM drive.

>P.S. what is a .tgz file?

TAR, GZIPed. The file has been TARed, and then GZIPed. You need both TAR and GZIP to decompact it.

These are on most ftp sites.

:-)

Roland.

> So what's the scoop on MiNT NET 4? Anybody out there using it willing t

Well I ftped MiNT-Net 0.4 from uni-paderborn last night. It had only been
up there a few hours when I got (I think).

I've only had it running for a little time, as it comes with a patch for
MiNT 1.10, so I had to recompile that first. Which wouldn't be problem if my
GCC hadn't packed up. Lucky I backed it all up last week!

Anyway so far its much the same, but as the .XDD file has grown from 50K
to 80K I suspect its much more developed. Seems to work with Ulrich's NFS
as well as 0.3 did.

More tests tommorow, and I'll actually try the NFS to my other machine,
as opposed to just rearranging the drives on my MSTE ;-)

:-)

Roland.

Well from what I can remeber of the launch of the QL, Sinclair commisioned
two O/S. QDOS and SMS (note not SMS2).

Both worked to a degree and AFAICR SMS was used at the first press
conference. However when the machine was released it was QDOS that was
installed.

Since then SMS has been an independent product.

How far does this 'slightly' compatible go?

Note this is all IMHO and AFAICR.

Roland.

Frequently Asked Questions
about the
CyReL CaTTamaran TT030 Accelerator

Third Edition

Release Date: May 20, 1994

Note to the readers of previous editions:

Additional Q&A paragraphs have been added throughout
this document. To view the changes from the previous
revision, please set your search pattern to '[3]'. All other
readers are advised to peruse through the entire documentation.

/// What does the CyReL CaTTamaran TT030 Accelerator do?
==========

It will speed up your Atari TT030, giving you approximately 50% more performance than a regular TT. It does this by speeding up the main clock of your TT from 32 MHz (standard) to 48 MHz (accelerated).

/// What happened to the 40 MHz mode? [3]
==========

Originally, we thought the optimum we could achieve would be a TT030 running at 40 MHz. However, during the development of the CyReL CaTTamaran we discovered that we would be able to go all the way up to 48 MHz instead. Thus, the decision was made to drop the 40 MHz

mode and provide only the 32 MHz and 48 MHz modes.

/// Does the CyReL CaTTamaran replace the MC68030 CPU in my TT?
==========

No it does not. You do not have to purchase a new CPU.

/// Will the CyReL CaTTamaran speed up the FPU operations? [3]
==========

Yes it does. You'll get up to 60% more FPU performance with the
CyReL CaTTamaran.

/// Do I have to get a new FPU? [3]
==========

No. You do not have to replace the CPU nor the FPU. You simply keep
the components you have.

/// Has the CyReL CaTTamaran any Cache memory? [2]
==========

No it does not. The CyReL CaTTamaran utilizes the existing memory in
the best way possible while keeping the cost of the unit down.

/// Do I have to buy new memory?
==========

No. You do not have to add costly cache memory to your system. You
simply keep the memory already installed in your TT.

/// Do I get a higher performance factor with faster RAMs ? [2]
==========

No. The CyReL CaTTamaran does not access the RAM itself. This is
being done by the CPU and the Atari TT chipset. Thus, the CyReL
CaTTamaran cannot take advantage of faster RAM chips. However, we
have optimized the memory accesses, thus giving you up to 78% better
access times than the regular TT chipset will yield. [3]

/// Does the CyReL CaTTamaran work with FastRAM?
==========

Yes it does. So far, we have tested the CaTTamaran with FastRAM
modules from GE-Soft and Atari.

/// Is there a 100% guarantee that it will work in my system? [3]
==========

No. We want you to understand that we cannot give you a 100%
assurance that it will work in every conceivable
motherboard/expansion board(s) combination. The CyReL CaTTamaran
employs a bag full of tricks to achieve the high performance level
it provides. We have exercised great care to insure the best
possible compatibility, but as with every other product, the risk to

its use and installation lies with the user. Please refer to the ordering details and our return policy for more information about this issue.

/// Will the CyReL CaTTamaran generate excessive heat? [2]
==========

No. During our extensive testing program we found that the heat generated in the accelerated modes does not exceed the safety limits nor does it damage any parts of your your TT.

Several design steps have been integrated to insure that the CyReL CaTTamaran accelerator unit will run as cool and as efficient as possible.

/// Will the CyReL CaTTamaran cause any damage to my TT? [2]
==========

No. We have tested the full operation of the CyReL CaTTamaran and included special design features to guarantee that the proper usage of the accelerator will not cause any damages or malfunctions.

/// Does the CyReL CaTTamaran work with VME bus cards?
==========

Yes it does. But we can only guarantee the full compatibility with our own line of VME bus boards, the CyReL Sunrise M16-1280 True Color High Resolution Graphics cards, CyReL VidiMix16 Desktop Video Modules, CyReL MPT-16 Modules and the CyReL TrIDEnt IDE Interfaces.

/// How can I find out if I can install a CyReL CaTTamaran in my TT?
==========

That depends mostly on your TT030 motherboard revision. To establish which TT030 motherboard revision you have, you must open your TT030. Please note that this may void your warranty. Once you removed the cover (and any metal shielding), please check the lower lefthand or righthand corner of your motherboard. Write down the revision level usually found on a white sticker on the motherboard. For a quick and easy installation, you should have at least REV. G.

If you have a ST RAM memory expansion board, please check whether the pins of the frontmost 96 pin DIN connector stick out at least 3 millimeters (about 1/10 of an inch) from the topside of the ST RAM expansion board.

Further, please ensure that those pins are clean and free of any soldering residues. [2]

/// What if I do not find any revision index/label? [2]
==========

Several customers reported that they were unable to locate the revision level sticker as indicated in the Q&A paragraph above.

Here are a few hints how to identify your board revision level
without the sticker:

* please locate the CPU. Is it surface mount (soldered directly to
the board) ? Look for a chip with the MC68030F33 labelling. If
you locate this chip on the right hand side of the board
(underneath the ST RAM expansion board) then you have one of the
more recent board revisions. If the CPU is on the left hand side
of the board or plugged into a socket, or even on a
daugtherboard, then you have one of the older revisions. The
installation in the older revision boards is a little more
involved, since it will require some soldering.

* please check if your board has a three pin connector labelled
W101 (used to change the clock speed of the FPU). If you cannot
find this connector, you probably have one of the older revision
boards.

/// Does the CyReL CaTTamaran installation require soldering?
==

It does not necessarily require soldering if you have a motherboard
revision REV. G or higher. Earlier motherboard revisions may require
soldering.

/// What tools do I need to install the CyReL CaTTamaran?
===

You will need a Phillips screwdriver, a flathead screwdriver (both
to remove the TT cover), pliers or any other tool to straighten the
tabs of the metal shielding (if any) for removal and a cutter to cut
one pin of a resistor.

/// Do I need any special expertise to install a CyreL CaTTamaran?
==

No. Common sense is all that is required. If you know how to open
your TT, plug in a few plugs, you should be able to install a CyReL
CaTTamaran yourself. If you do not feel comfortable installing the
unit yourself, ask your nearest Atari dealer to perform this task
for you.

The CyReL CaTTamaran comes with our highly acclaimed RUN-ME-FIRST
installation program that will demonstrate each installation step
with graphics and animations right on your screen BEFORE you start
the installation process. The same instructions are also included in
printed form to further facilitate the process. [2]

/// Can I control the speed of the CyReL CaTTamaran?
===

Yes you can. Each CyReL CaTTamaran comes complete with the CyReL
Dashboard utility. This accessory program allows you to switch at
any time from 32 MHz to 48 MHz or from 48 MHz back to 32 MHz.

/// How compatible is the CyReL CaTTamaran?
==========

The operation of the CyReL CaTTamaran if fully transparent.
Programs do not usually notice any difference when running at 48
MHz. All programs tested so far ran without any problems. They
simply execute faster. However, we cannot give a 100% compatibility
assurance since it is virtually impossible to test every single
program out there in combination with the hundreds of utility and
accessory packages available for the Atari computers.

/// Which programs will benefit the most from the speed-up?
==========

The speed-up will be most apparent with programs that rely on CPU
intensive tasks, like blitting, compressing, de-compressing,
converting, rasterizing, scrolling. Since the CyReL CaTTamaran
speeds up the FPU as well, programs that rely on FPU performance
(like DynaCADD or InShape) will be sped up too.

/// How about some benchmarks? [2]
==========

Here are some PRELIMINARY figures. The benchmarks have been
compiled with Ofir Gal's GEM-BENCH Version 3.41:

```
GEM Bench v3.41 = Ofir Gal 3.5.94
==========
TT 030 TOS 3.06, MiNT not present
Blitter not present, NVDI 2.03 present
Video Mode = 640 * 400 * 2 Colours
LineF FPU installed
Run and Malloc from FastRAM
Ref = TT + FPU, ST High
CyReL CaTTamaran @ 48 MHz
ROM relocated to FastRAM
NVDI driver installed

```
==========================================
Graphics: 643%
CPU: 145%
Average: 511%

Compared to a regular ST, the TT030 + CyReL CaTTamaran will deliver
a CPU Integer Division index of over 1760%.

/// How about some more benchmarks? [3]
======================================

Here is the latest benchmark update. The CyReL CaTTamaran can be
operated in two modes, 32 MHz and 48 MHz. In 32 MHz mode, the CyReL
CaTTamaran yields exactly the same results like a standard TT030,
reporting around 100% for all the different test categories.

Below you will find three different sets of benchmarks. The first
was taken on a TT030, equipped with FastRAM and the CyReL CaTTamaran
running at 48 MHz:

GEM Bench v3.41 = Ofir Gal 3.5.94
==========================================
TT 030 TOS 3.06, MiNT not present
Blitter not present, NVDI not present
Video Mode = 640 * 400 * 2 Colours
LineF FPU installed
Run and Malloc from FastRAM
Ref = TT + FPU, ST High
CyReL CaTTamaran @ 48 MHz

/// How much does the CyReL CaTTamaran cost ?
==========

The CyReL CaTTamaran package retails for just US $99.00 or Cdn $115.00 .[3]

/// When is the CyReL CaTTamaran going to be available?
==========

The CyReL CaTTamaran is available now. Please contact your nearest dealer, CyReL distributor or Cybercube for more informations. [3]

/// Where can I get a CyReL CaTTamaran ? [3]
==========

The CyReL CaTTamaran is shipping to a lot of dealers all over North America right now. Please check with your nearest dealer for availability. In case you are not able to get your CyReL CaTTamaran Accelerator through your Atari dealer, please contact Cybercube directly at the addresses provided below.

/// How much do I have to add for Shipping and Handling ? [3]
==========

Please add $6.00 for S&H (regular mail). We also offer shipments via courier. For more details, please contact Cybercube directly.

/// Can I return the product if it will not work in my TT?
==========

Yes you can. We will offer a 10 days return policy. Please check for details when ordering. Note that there is a handling fee involved when returning the product. When you return the unit, we will refund the cost of the unit minus 15%. [3]

/// Will any de-installation require soldering ? [3]
==========

Yes. In case the CyReL CaTTamaran might not work in your TT030, and you decide to return it, you would have to solder the one connection that had to be cut during the installation of the unit. This is probably the best and most durable way to do it, but other means of reconnecting that one connection can be devised in case you do not have access to a soldering iron.

/// Is there be a special GEnie topic for the CyReL CaTTamaran?[3]
==========

Yes. Please go to the Atari Roundtable (m475;1), enter the hardware category (set 4),then read all the latest news in the CaTTamaran topic (rea 33 new). We would be happy to see you there and provide any further assistance.

/// Where can I get more information if I have additional questions?
==========

Contact either your nearest dealer, distributor or Cybercube directly. We will be glad to be of assistance. To reach us, send e-mail to:

GEnie: CYBERCUBE
CRS-Online: Cybercube Research
InterNet: cybercube.research@canrem.com or

3164. Elite II Questions/Problems

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 07:56:25 UTC
From: kllove@hellcat.ecn.uoknor.edu
Message-ID: <2rn379$5m2@constellation.ecn.uoknor.edu>
Source record: 186822

First off, I'd like ask people for general hints. I'd also like to know what that easy route was that had no threat of attack and what items would be a good idea(tm) for trade in each of the two systems.

The more important problem is that I have two copies of the same disk (I assume it is the second disk since there are no executable files or an AUTO folder). The label has "English version" written on it. Is there an "American version"?

What should I do to get a valid first disk? I purchased it from TOAD Computers in Maryland (I'm in Oklahoma and therefore do not have a local dealer), but I'd rather not send the whole package back as that would be a little expensive. I guess I'll call them up and ask if I can get a set of replacement disks or something. Sending the disks back to the UK would not be a good solution either. Anyone got any ideas?

Oh yes, what files should I copy to the hard drive? Does it matter if I put them in a sub-directory like J:\GAMES\ELITE2? Once thing I despised about Phantasie III by SSI was that it required you to put the various files/folders in your root directory. And the amazing thing was that Phantasie II allowed any number of intermediate sub-directories (at least 4 anyway). I would be extremely upset if Elite II did something like this.

adTHANKSvance,
Kenneth Love

P.S. I would prefer e-mail, but a follow-up is okay.

3165. Ram tester wanted

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 08:20:34 UTC
From: Graham.Irvine@mettav.royle.org
Message-ID: <769595066.0@mettav.royle>
Source record: 186823

It was none other than Mr. D.F. that wrote on 17 May 94 that ,

MD> Does anyone know where I can get a good ram-tester for the ST. I am
MD> going to upgrade a 512 to a 1024 and would like to check out the
MD> upgrade.
MD> Many thanks....

Well if you are going to get an upgrade then you should be speaking to Marpet
and they supply a disk of useful program's one of which is a ram tester of the
most thourough kind ....best i've come across.

Don't know about the status of this program ie if it is distributable without
the marpet memory board ,but I guess not.

> All replys welcome.

I've yet to find an Icon editor that can read my deskicon.rsc file!
Does anyone know why this is?
My deskicon.rsc file is nearly 150k long, I heard that RSC files had a 64k limit. Could this be the reason, and if so how come the desktop can load it fine??

3170. Mega STe modem1 port Upgrade.

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 15:35:50 UTC
From: Darren.Trutzenbach@f616.n2605.z1.fidonet.org
Message-ID: <d1e_9405230401@nisc.fidonet.org>
Source record: 186658

Does anyone know where i can obtain some sort of internal upgrade/PCB
to increase my Mega Ste's modem1 port above 19200. i would like to go
at least to 57600. I have heard of one available in Canada, i cannot
remeber the name right now, but i would like to check out all that
is available and see if there are any compatibility problems, before i buy.

I have plenty of Documentation on how to hack my way around and do the job.
but i would like something commercial, that is garanteed.

3171. ST->PC Transfers

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 16:19:42 UTC
From: martin@gw6hva.demon.co.uk
Message-ID: <769623582snz@gw6hva.demon.co.uk>
Source record: 186840

Hi ...

Following my earlier postings, I've checked and found the ST (and PC) NET software on ucsd.edu in /hamradio/packet/tcpip under the pe1chl banner.

There are some readme files and the latest ST version is there (930430) with some earlier PC version of the code. You may find that the .TAR archive has the PC newer versions in it (also 930430).

Any probs, mail me.

Cheers for now, Martin.

3172. Mule for the '90s on the Atari ST

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 16:53:41 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <1994May22.165341.13830@newsserver.rrzn.uni-hannover.de>
Source record: 186829
Cross-posted to: comp.sys.atari.st,rec.games.video.atari,rec.games.video.classic,comp.sys.atari.8bit

Hi,
I am currently working on a new and improved version of M.U.L.E. for the Atari ST series of computers. The new game will be called A.S.S. (Automatic Santaclaus Simulator), and based largely on M.U.L.E. While capturing all the essential features of M.U.L.E. and trying as close as possible to give you the same feel as the Atari 8-bit version, many new features will be included. The game will be shareware, and as soon as I finish it (several months from now), I will upload it to several FTP sites. Among the new features will be:

Up to 8 players can play.
Remember the original version of M.U.L.E. was written for the Atari 400/800 which had four joysticks, so that four people could play. The Atari XL/XE only had 2 joystickports which meant that only two people could play. Although a standard Atari ST only has 2 joystick ports, you can get an adaptor for the printer port that lets you add two more joysicks. Games such as Gauntlet II, Leathernecks, and my own 8-player games use this adaptor. If you have an STE, you can get adaptors to add two joysticks to each port on the left hand side, giving you a total of 8 joysticks.

More plots of land. The original had 9*5 plots. This version will have about 17*11 plots.

Longer playing time (ie. More than 12 turns).

An environmental aspect.
In this version of the game, the players will have the responsability of looking after the planet as well as trying to earn as much money as possible. At the start of the game, there will be a fixed number of trees on the planet. If the number of trees present is below a certain amount, the condition of the planet will deteriorate. It is possible to restore trees (see later)

8 Types of A.S.S. (M.U.L.E.) available.
Food, Energy, Iron, Diamonds (equivalent to the original's Food, Energy, Smithore, and Chrystite(sp?))
Hydro energy: An alternative to solar energy
Fish (I am not sure at this moment what to do with these. My version of the game replaces the valey with a network of rivers with junctions)
Wood: Used for building A.S.S.es as well as Iron.
Flower: Every turn, for every plot of land that has one of these installed, a new tree is created per plot. Are usefull for saving the planet from environmental destruction.

The computer players will be able to chose from a variety of species. Some species play the game differently than others. You will be able to select

which species you will be, and which species will be played by the computer players.

The ability to design your own characters.

A rap version of the theme tune.

The game should be able to work on a 512K machine, but the full version will probarbly require 1 megabyte. The game will be enhanced for the Atari STE computers.
At the moment, I am still open to new ideas (especially about what to do with fish). You may of course suggest them to me, and I might include them.
I need a lot of encouragement if I am ever going to get round to finishing the game. If you want to see the game finished, send me an e-mail message of encouragement. Be warned that it may take several months before release. I have been working at this game off and on (mostly off) since the start of 1992.

Looking forward to hearing some comments,

Andrei. (ae-a@minster.york.ac.uk)

3173. Transfering data to a PC

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 18:46:50 UTC

3174. Re: GDOS and ASSIGN.SYS

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 18:57:19 UTC
From: avg@cwi.nl
Message-ID: <Cq7wnJ.H9C@cwi.nl>
Source record: 186830

bmeier@rzu.unizh.ch (Beat Meier) writes:

> Hello

>Is there an article on the net which explaines the format
>of the file assign.sys ?

There is no format. There is no assign.sys file that all GDOSes
can read, except perhaps one that contains no fonts at all.

3175. Wanted: Atari MegaSTe Manual

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 19:40:06 UTC
From: cfuhrman@csugrad.cs.vt.edu
Message-ID: <2rocem$3fr@csugrad.cs.vt.edu>
Source record: 186831

The title subject says it all. I discovered when I purchased my
Mega STe used, it didn't have a manual for it. Thanx!

>More tests tommorow, and I'll actually try the NFS to my other machine,
>as opposed to just rearranging the drives on my MSTE ;-)

Well tests have been unsuccessful. I cannot get my 2 STs to talk to each other using the 4.1 socket driver.

What I did was to patch the MiNT 1.10 with the supplied patch and recompile it as a MTOS kernel. This worked fine, and runs the 0.3 socket driver just fine.

However when I substitute the 4.1 socket driver - one machine can't find the other. Trying udpprobe just results in no answer or 'network cannot be reached' error.

I went the whole hog and tried the new patched MiNT and the 4.1 socket driver on both machines but this didn't work either.

The NFS was a dead loss under all MiNT-Net 4.1 configurations too.

This is unfortunate as I had udpprobe and NFS working under MiNT-Net 0.3, and I had hoped this new version would solve my remaining problems.

Anybody else had any luck?

Roland.

Message-ID: <2roei0$doo@dux.dundee.ac.uk>
Source record: 186832

I have recently bought a 2nd hand Falcon (TOS 4.01) 4/65. At present
it boots up into some get interface, but not MultiTOS. However the MTOS
disk does not contain any "INSTALL.PRG" so ot will not install it.

I have also noticed that the re-draw rate on the screen is awful,
is there any way around this?

Is it worth ditching 4.01 in favour of 4.05/5? If so how difficult is
it to install.

Can someone please end me the approprate INSTALL.PRG file.

>Does anyone know why this is?
>My deskicon.rsc file is nearly 150k long, I heard that RSC files had a 64k
>limit. Could this be the reason, and if so how come the desktop can load it
>fine??

My deskicon file is 98K and I have NO problems whatsoever. I use Dr. Bob's
icon editor version 1.4 for the Falcon. It will even let me add icons
(up to 199) to my deskicon file!! The file is ICDRAW14.ZIP for those that
are curious.

Probably the limit of 64K is just the default size (before expansion) of the
.RSC file. Originally it contains rougly 30 or so icons in it.

3179. Graphics in ASM.

Newsgroup: comp.sys.atari.st
Date: 1994-05-22 20:54:51 UTC
From: slh100@tower.york.ac.uk
Message-ID: <Pine.3.89.9405222102.B4933-0100000@unix>
Source record: 186834

Does anyone have any assembler code for drawing filled polygons/triangles and lines on to the screen (ideally doing clipping if they are off the edge)? I am working on a game (in 16 color low resolution) and the VDI routines are way too slow.

Is assembler the fastest way to do this, or is it worth trying to use the blitter chip? Anyone got any docs (or code examples) about programming the blitter?

Thanks,

Shawn Hargreaves "God is real, unless declared as integer."

> Any suggestions? Ofir: do you know
> what the problem is?
> thanks for any help.

I doubt this will help you very much, but Calligrapher did have some very nasty problems (the program is out of the market now, they say..). First, only the very latest version (2.27 maybe..) works at all reasonably well. Older ones are very buggy, and almost impossible to install if one uses a newer TOS, NVDI, SpeedoGDOS, or such sophisticated stuff.. It should, however, work in your MSTE if you don't have any special AUTO-programs or accessories installed. I suspect some kind of collision between your system programs and Cal.
Second, that damned piece of software really hates my Falcon... ;-(It really is a shame that they never got Calligrapher working reliably; basically, it is a nice text-program, and it might have become something special in Atari world. But... Now we must rely on Papyrus Gold, Tempus Word (when will they finally make an english version..?), and That's Write 3. The first and the last exist in english version, and are well worth some praise! Especially Papyrus is great.

Greetings, Tommi

> ackerman.29@osu.edu

Well I now have a Hard Drive in my Mega ST2, games so far boot OK, I have never
had problems with booting with ICD software...

The is a very simple way to boot 100% from floppy, get hold of DC Format 302,
the is a option to put things in the boot sector, like bypass Hard Drive
and a few otheres, I don't remember what the button is called...

With this disk in drive A, just hit the reset button and you will find that
the Hard Drive does not boot at all....

Well, I was finally able to locate and FTP the two files for that wonderful Lazer demo. (lazer_1.zip and lazer_2.zip on umich) And BOY was I disappointed.

Why is it that these european demo writers INSIST that everyone's TV runs at 50hz? They didn't make it support VGA, so they could have at least allowed us to set it to 60hz so people in the US can watch it.

> utility for that?

If you have a TOS version greater than or equal to 1.4, you need only format disks from the desktop to get a PC compatible disk. If you have problems, I recommend the program ps2form.tos. It is old, and not impressive to look at, but it has produced PC compatible disks for me flawlessly for years. I have never had problems getting the disks to read in PCs or Macs (using AFE or DosMounter). They even read perfectly in some NEC machines that often don't accept floppies formatted on other PC clones. The program is available from atari.archive.umich.edu.

Most third party formatters will produce the correct bootsector for PCs (but you must use 80 track 9 sec/track format). Thus, Universal Item Selector, Neodesk, etc. will all produce the correct PC bootsector information. If you have some Atari formatted disks (80/9 format) with the incorrect bootsector (i.e. you formatted the disks with the TOS 1.0 or 1.2 desktop), you can write just the correct bootsector using DC Formatter. This will save you the work of transfering your files to another floppy.

I would think one of the main reasons is because at 50hz you get more time
for your program. The screen is draw only 50 times compared to 60-70 for
US TVs and VGA.

Is ICDRAW14.ZIP ftp-able from anywhere?

The 64K 'limit' is because in the RSC file header there is a field
(don't ask me why) which contains the file length. The field is only
16 bits wide, hence 64K.

Apparently the AES rsrc_load call happily reads in files > 64K.

MTOS should be pre-installed on the internal disk. To enable it, just
rename c:\auto\mint.prx to c:\auto\mint.prg, or use the MiNT CPX
(easier).

>I have also noticed that the re-draw rate on the screen is awful,
>is there any way around this?

Yes, buy NVDI from System Solutions (50 pounds ish - isn't everything
for the ST :-). It replaces the builtin VDI (the bit of TOS that draws
everything on the screen slowly) with a turbo-fast version.

An essential purchase!

>Is it worth ditching 4.01 in favour of 4.05/5? If so how difficult is
>it to install.

4.01 is basically broken. AFAICS, installing a later version is simply
a matter of unplugging the ROMs and plugging a new set in. Call Compo,
they are the only UK Atari-approved way of getting TOS upgrades.

TOS 5 is still not available; it has been available in beta form to
developers for a while. Basically, it contains the MTOS version (v4.0)
of AES in ROM (actually, a much better version (v4.1) of the MTOS
AES).

> Could somebody tell me if there is a good St Emulator on IBM PC ?
> Thank you.

Yes, but it's expensive. It's called Gemulator and requires either
a 486SX-25 or a 386-40 to get the same performance as the 8Mhz 68000
in the ST.
I can't remember how much it costs, but if want to know more email
me and I'll dig the article out about it and send you a summary of it.

Given how the high and might YaK seems to have taken over this newsgroup (all bow down and say llama :-)), I don't know if this will get noticed :-(

Anyway due to an accident with an expired quota limit and a mailbox I have lost the list of people I sent a copy of M.U.L.E to. Could those people please get in touch with me again via email and I will try to put the addresses somewhere more permanent :-)

It was suggested by someone (can't remember who, see above) that I should change the name as it is really my interpretation of M.U.L.E not a port. This seems like a good idea to me, so any suggestions for a new name will be well received (as long as it dosen't involve llamas :-)).

I am currently selling my 520 ste with 4 mb/ 120 mb HD. This system includes a color 1224 monitor with Spectre GCR emulator with genuine MAC roms. I am selling the system for $600 or
best offer. The system has the ICD link adapter for the hard drive. I am also willing to trade
the machine for a 486 DX33 or DX/2 66 I don't need a monitor for the IBM machine. You can notify me at 215-457-6074 or a the mail address below. Thanks.

Sincerely,

Orlando Santiago osantiag@motown.ge.com

P.S. I am still an Atari user. I still have my spare Mega 4 machine. I need a PC for a job that I am working at.

```
+-- This was written in a previous article by DuncMan...
|> Duncan (75% certain to save up and buy SMS2)

Well, here I am again. Having read the ST Review feature (The
mag really has improved since I last read it), some useful EMails from
readers, and the posts stuck here, I've been reconsidering my opinion. I've
tried to draw up a list of each system's advantages and disadvantages.
If I've got anything wrong, then please correct me.
AFAIK, there are currently 5 multitasking replacement O/Ss that
will run on an STE. My system is rather minimal, being just 1Mb with no
HD. This has coloured my opinions a little, understandably.
Oh, and it was ST Format that thought SMS2 was the same as Unix...

GEM type O/Ss
-------------

MultiTOS
--------
for: The official standard
Pre-emptive
Built in desktop
Compatible with MultiTOS (!)
against: Bugged (alledgedly)
Needs 2Mb & an HD
Tricky to configure
Slow
Uses GEM-style interface

Geneva
------
for: Fast
Stable
Extra facilities over GEM
against: Needs 2Mb
Runs .TOS & .TTP programs in single tasking mode
Co-operative
Does not replace entire O/S
Needs separate desktop
Limited features
Not fully MultiTOS compatible
Uses GEM-style interface

Mag!x
-----
for: Very fast
```

Stable
Built in desktop
Runs .TOS & .TTP programs in multitasking mode
Compatible with TOS/GEM
against: Needs 2Mb
Uses GEM-style interface

Non-GEM type O/Ss

OMEn
----
for: Versions coming for other systems
Built in desktop
Device drivers
against: Not compatible with TOS/GEM
No apparent support yet
Not available yet

SMS2
----
for: Pre-emptive
Very fast
Very small
Built in desktop
Built in networking
Device drivers
Works in 0.5Mb & no HD
against: Not compatible with TOS/GEM
Object oriented (jargon!)
Little apparent support yet
Needs separate MSDOS/TOS disk reading software
Relatively expensive

I have to admit, I don't much like GEM. It looks somehow
primitive (this is understandable when you consider how old it is) (as
does MS Windows, IMHO). I'd rather be using a computer with a more
professional, capable feel. SMS2 gives me that impression.
There isn't a whole lot of software yet, but what there is looks
rather more capable than a lot of the GEM stuff that exists. I also like
the use of a 6*8 font in SMS2 and OMEn- allowing an 80*25 terminal emulator
to sit in window, or lots more columns of a spreadsheet to be seen at
once.
I'm not sure I want to stick with an O/S that is based on TOS,
let alone GEM. I'd like to be able to share data with my exsiting
GEM/TOS software, but that means being able to read the disks. A few
people have said that there is an SMS2 program to do this, but I haven't
heard anything about this on OMEn.
In summary, then;

Duncan (85% certain to save up and buy SMS2
60% " " " " " " Mag!x

```
60% " " " " " " OMEn
40% " " " " " " MultiTOS
35% " " " " " " Geneva)

I called a few of the places manufacturing parallel port backup devices, and
asked if they would allow me to write GEM based software for the Atari
series of computers. All I needed was the codes which are sent down the
parallel port - I would be prepared to buy the backup device.

In all of the cases, the answer was "bugger off, its a secret".

>

As far as I am aware, the cheap internal ones are IDE - (I have no idea how
a Falcon would see it though !)

>There must be a way to bypass the hard drive on boot up.

It should be possible to put a program on the boot-sector of a floppy
disk which would automactically set the deafult boot device (bootdev ,
[systemvariable] $446) to 0 (zero ,drive A).

I don't know if this would work with a Gasteiner Hard Drive and nor
do I know about such a program which can install such a boot-sector.

Try to set $446 to 0 (any BASIC language etc. would do) after booting
from the hard drive and do a reboot. The floppy drive _may_ be the
boot-device now if you're lucky. [This will basically do the same
thing as setting $446 to 0 from the boot-sector as these values
are normally not altered by a reset. If $446 already contains 0 then
this won't naturally help you much.]

The coverdisks seem to be the only redeeming feature at the moment. Take the
SMS2 review for example, what did it tell me that I didn't already know
from looking at the advert? Nothing new, most of us already know what
multi-tasking is about.

Mind you, from what I remember form my under-grad days, concurrency seems
a better description.

I live in Ottawa (that is in Canada, NA for the geographically
challenged :-) and I have had no problems whatsoever viewing any of my
Falcon demos on a TV or SC1224. As far as supporting VGA, forget it!
PLEASE use the RGB! You cannot get 768x480x16bit on a VGA and that is what
a lot of the demos use. I believe they also take advantage of the extra
clock cycles when an RGB is hooked up. Come on, most people already have
an SC1224 and if they do not they can pick one up very cheaply used or new.

3218. WinRec Recording Problems...

Newsgroup: comp.sys.atari.st
Date: 1994-05-23 19:52:01 UTC
From: nj1@ukc.ac.uk
Message-ID: <8059@merlin.ukc.ac.uk>
Source record: 186673

I have a problem recording to my HD using WinRec.

The trouble is, I need to set the walkman to a ridiculously low volume just so I don't overload the circuitry in my Falcon - usually the volume has to be set to as low as one or even a half (the scale goes up to ten).

I guess the reason is that the walkman is powering the connection (as it would need to if headphones were connected) as is the microphone jack on the Falcon, as it would need to if a Microphone were connected. So I have twice the power that is needed going through the connection.....

Any ideas how I could overcome this, and does anybody else have any similar problems???

Neil.

Yes, in a few months, you'll see the ULTIMATE desktop utility. It is called Desktop Wallpaper, and it allows you to replace the desktop background with any image (tiled or not) and allows you to edit these images in a VERY nice toolbar-type editor that runs as an accessory. The program even works under MULTITOS! Anyway, it allows you to edit desktop icons as well. You can set them to any size, add them to the file, or edit old ones.

Just a hint of what's to come...

A microphone input is designed to recognize a VERY LOW POWERED signal
and amplify it to a useable level. The outputs from your stereo are
amplified and can destroy the inputs to your Falcon. If you can use
an audio source with LINE outputs that should work just fine.

If you only have the walkman you can use an audio tapered variable resistor,
a linear taper will also work, connecting one end to the audio, the other end
to ground, and the ceneter connector to the Falcon, through a non polarized
capacitor.

This is effectively lowering the volume and removing any DC bias the signal may
have. In any case you should definitely remove the DC bias with the capacitor.

How do you get it to work at 60hz? I just connected it to my TV, and as with
all other 50hz demos, the screen did nothing but roll. Is there a different
version? How can I configure it for 50hz?

: Well I ftped MiNT-Net 0.4 from uni-paderborn last night. It had only been
: up there a few hours when I got (I think).

: I've only had it running for a little time, as it comes with a patch for
: MiNT 1.10, so I had to recompile that first. Which wouldn't be problem if my
: GCC hadn't packed up. Lucky I backed it all up last week!

: Anyway so far its much the same, but as the .XDD file has grown from 50K
: to 80K I suspect its much more developed. Seems to work with Ulrich's NFS
: as well as 0.3 did.

Ooopps, Roland
It's not just 30k "bigger" In this 30k you'll find TCP-Support. That
means you can now compile and run most TCP/IP Clients. I already
compiled ftp, ftpd, finger, fingerd. After I received MiNT-Net 0.4
i did a 2 hrs. lasting WWW-Session with Bart Schulers "lynx" Port. I
really enjoyed it, doing this with my Mega-4.
I think there will be a lot of new Internet-Tools in the near future.
There were rumours that some people are working on a GEM-based WWW-Client.
So, if you have an Atari and a SLIP-Account, just hold the line ;-) !

It was none other than Beat Meier that wrote on 21 May 94 that ,

BM> What video titling software (shareware, publicdomain, comercial)
BM> are there for the atari ?
BM> I'm also interested in animation progs.

The 'Cyber Series' (Paint,Sculpt,Studio) are good ,but a bit old now. Indeed
Paint sadly doesn't like new TOS's which is a shame because it is
a easy package to use and get very reasonable effect's.

Personally I find this route offer's me much more scope than a dedicated
Video Titler which to me proved to be too limited.

There is also a Video Titler design data disk available with some already made
up 3D lettering etc . As these packages are no longer supported (although see
below) you might be able to pick them up quite cheap.

I beleive Lexicor (or at least 16/32 who distribute there stuff in the UK) have
taken over some of these program's after Antics demise and indeed produce some
pretty smart program's of there own .

>My deskicon.rsc file is nearly 150k long, I heard that RSC files had a 64k
>limit. Could this be the reason, and if so how come the desktop can load it
>fine??

Old-format RSC files (those before colour icons were added to the AES)
were limited to 64K total size (lots of 16-bit values in them).

The new format allows extensions at the end of this 64K limit. Colour icons
is one of those extensions. This still means that some RSC components are
limited, but as colour icons can be very large, putting them above the 64K
limit leaves plenty of room for other structures.

To edit them, you'll need something that understands the new format.

Interface, the RSC editor, does. It is a fully-fledged RSC-editor, not just
an icon editor (so you can change all sorts of stuff in existing programs,
such as adding 3D effects to buttons). Interface is a commercial product,
contact gribnif@genie.geis.com for more info.

This is a bug of AHDI 6.03, get AHDI 6.061. The only way I found of
recovering the data is to recreate the first sector and sometimes the FAT
as well. If you use DMirror or ST Mirror then you will have a copy of your
FAT.

Hi All,

Does anyone have a txt file with the solution or hints to the game Knightmare? I'm stuck on the final level, (in the section "target practice) where you ride in a rail car and throw stuff across some bushes to hit the opposite wall. Any help would be greatly appreciated!!!

Rick...

On 19 May 94 at 16:52:21, Bob did truly state.....

BL> We have seen this occur on several Falcons attached to either
BL> Archive Vipers or WangDAT. If this occurs on your Falcon then check
BL> your termination, make sure that the resistors are seated properly
BL> and in good shape, turn on termination power jumpers if your drive
BL> provides them. Then turn the components on in sequence first the tape
BL> drive and then the Falcon. The drive should be recognized normally.
Thanks for your suggestions Bob, I shall take my mini-tower case apart and check my SCSI devices terminations and power them up seperately (currently everything powers up together when I throw the switch on the tower case!)

Spencer

3247. Re: GDOS and ASSIGN.SYS

Newsgroup: comp.sys.atari.st

Message-ID: <2rscab$28n@tuegate.tue.nl>
Source record: 186755

bmeier@rzu.unizh.ch (Beat Meier) writes:

>Is there an article on the net which explaines the format
>of the file assign.sys ?

Yes there is. But I cannot remember the name (it was something llike
Everything you always wanted to know aabout GDOS but were afraid to
ask)

>I want put the gdos fonts in an subdir fonts but the statement
> path = c:\fonts\
>in assign.sys dosen't work.

It probably does work, but you didn't specify the fonts in the correct
way (BTW, unlike annius says, iot doesn't really matter which GDOS
version you use... I've used several versions of GDOS, including SPeedo
(I still have 4.1) and there are several programs available that can
assist in creating assign.sys files)

>What are the differences if the fonts are in 01p 02p 03p 04p ?

01p is for fonts that are available in any res. 04p is for mono 640x400
res if I remember correclt. You need to fill in the exact filenames of
the fonts you wish to use (except for the path of course).
I haven't seen any GDOS that shows that it is loading fonts (or even
which fonts) so you'll have to check if fonts were loade with a program
known to work with GDOS fonts, like Kandinsky or Everest.

Good luck,

Erlend.

From many ftp-sites a file with the name hsc140.zoo is available. It's
an archive with the Heat 'n Serve C compiler. It does not compile C++,
but you can use it with just a single floppy drive. it is excellent and
free. I think this is in the FAQ, but I haven't seen Steven post the FAQ
in a while (hmm I remember I volunteered to take over from him some
while ago...)

Following is a message from Bob Brodie posted on GEnie:

Atari ST RoundTable
Category 14, Topic 24
Message 1 Mon May 23, 1994
BOB-BRODIE [Atari Corp.] at 17:51 EDT

Dear Friends,

For some time now, I have felt that I needed to spend more time with my family. I have been presented an opportunity that will not only allow me to work at home two to three days a week, but also includes a significant pay increase. I cannot in good conscience to my family refuse this opportunity. It is with great regret that I have sumbmitted my resignation effective June 3, 1994.

For almost five years now, my job at Atari has had a very high priority in my life. During that time frame, my two sons have begun to turn in to men, and my little girl into a teenager. My sons have been a real handful the past two years in particular, and my being around them has had a very positive effect on them.

Even though there have been, from time to time, other job offers, my preference has been to remain with Atari. I believe in our products, and they are my personal choice as a consumer as well. If my personal circumstances did not require me to be at home more often, I would gladly remain with the company. It's not often that someone has an opportunity to turn their hobby into their job. I am thankful that Atari allowed me to do just that!!

I am grateful for the opportunity to serve Atari, and the Tramiel family. I have enjoyed my time at Atari, and have gained invaluable experience. I wish the company great success with all of it's products!! If fate should bring our paths together again, I would welcome the opportunity to work with Atari again. It has been a privilege to serve you.

My thanks go out to all of you (and there are far too many to mention here!) that have been such a special part of my life. I have made friendships with people via GEnie that I expect to be a part of the rest of my days!!

Sincerely,

Bob Brodie

3258. ViewTek monitor

Newsgroup: comp.sys.atari.st
Date: 1994-05-24 11:50:58 UTC
From: hridley@axion.bt.co.uk
Message-ID: <2rspn2$lrt@pheidippides.axion.bt.co.uk>
Source record: 186615

I purchased a ViewTek 12" Greyscale monitor last Xmas for use with
my STE and MIDI keyboard.
The monitor is medium resolution but is supplied with software to
emulate high resolution.

The software was missing when I received the monitor and the shop
from where I purchased it has shut down before they could supply the
software.

I am using a PD mono emulator at the moment to simulate high res. and
it's not very good.

Does anybody have any experience of a ViewTek monitor ?

Would the missing software provide better high res.?

Does anybody know of another UK source for ViewTek so that I can maybe
get hold of the software?

Cheers

Harry Ridley

I dunno if this will work on the Falcon or not, but it's worth a shot:
get a copy of DCBOOTIT (should be on GEnie, FTP sites, etc). From
what I recall, it will let you boot, making the choice
of resolutions (ST Low and Med), 50 or 60hz, and drive A or B.
Considering the Falcon, I can only guess that the resolutions choice
might be a stumbling block, but it can't hurt to try (dcbootit is
a very small download)...

Let me know if it works or not...

Lattice doesn't require a hard disk, but now that I have a hard disk I wouldn't want to use it from floppy again (or anything else for that matter)

I don't know anything about Pure 'C' but I wouldn't fault your analysis of the other systems.

The main one to avoid is GST 'C' which did run from floppy but was real slow, integer only, and generally crap. But I don't think you can buy it any more anyway.

The best mono-emulator by far has to be SEBRA. It is PD or Shareware (I forget which) and is available by FTP from your usual outlets.

The second best one is called something like 'NDK_MONO.TOS' and installs a mono emulator *into the bootsector* so it doesn't take up any room on your disks. This is PD.

Sorry for being so vague, but I have not used one of these of a while as I am the proud owner of a real hi-res monitor!

>more... Hrm...

I believe there is some program (on GEnie or atari.archive) whose
name I can't recall, that is supposed to give GEM a nice 3D look
(well, anyone not on TOS 2.05 anyways). Anyone remember the name?

Then there's Geneva or MultiTOS which'll give you a 3D interface
as well...

Just some thoughts...

Get a copy of the latest issue of St Review, there's a two page feature
about Let 'em Fly. There is also an English version available with docs.
Let me know if you can't find it.

What software is there that you would run, besides TOS programs? All the good
software is written for GEM.

The problem is that the program itself sets the video to 50hz. It would be nice if some people made their software configurable.

They were wrong - NVDI is the most compatible, useful utility I own. What
it can (sometimes) do is show up bad code in other people's programs. But
even that is rare.

As you said, you own a standard 1MB STe. You just won't get the best out of GEM with any of the three standard graphics modes. GEM on a Falcon and SVGA is pretty amazing though - it gives a much better working environment. I use 16 colour mode at a 736*528 resolution (you can get much better with a better monitor) and even my old GEM programs look *much* cooler.

And programs which are written for later versions of the AES (ie the Falcon/MTOS one's) are even nicer. If they use the background, activator and indicator bits in the RSC objects you get a great interface that's very NeXT like (in appearance).

You are stuck with GEM though - there's no way anything else will work on the Atari. Although SMS and Omen are very clever they will be limited to a few anoraks.

Check out Ofir's 'Top Notch' column in the latest issue of Atari ST Review
- you should find your questions answered.

LEF is excellent, and a combination of LEF and WiNX really improves the
interface on any ST(e)/TT/Falcon. For anyone that's interested, LEF is no
longer out of development - it's changed hands and is now being developed
by a couple of guys on cix.

Hello!

I would like to be able to view TV programs on an ATARI monitor (SM146). I remember having seen some time ago (1990) a TV tuner which could be simply attached to the monitor.
However, I was unable to find recently something similar (except for rather expensive
multimedia tuner cards, and even these only for IBM-PCs). Can anybody tell me whether such a thing exists at all and what the price might be like?
Thank you in advance,

Dan Pirjol pirjol@vipmzw.physik.uni-mainz.de

I too now have a Hi Res monitor but did investigate using mono-emulators a couple of years ago. I actually PAID 20 quid for the Monulator, which is much better that the PD one (not Sebra, I haven't tried that) I got from pdsoft.lancs.ac.uk. With Monulator you can actually zoom into the screen in the vertical axis, which is neat if you only have an old TV:-) As basically all I do is run Notator SL an it runs in med-res I ended up doing that until I got a hires monitor because of the processor overhead with mono-emulators.

There are at least two offerings you should consider. RSVE is a German homebrew hack (though you might be able to purchase the board premade) described in Utilities/Tosfixes/rsve_1.lzh on atari.archive. Connect and other German telecomm programs directly support RSVE (and Connect is the best, IMHO).

Another is TurboRS. It is a soon-to-be product from Canada. The authors are accessible via email. This product sounds very promising (they plan to have an RSVE emulation mode as well, I think). Here is one author's address:

Kevin Tessner <ktessner@isle.waterloo-rdp.on.ca>

They have a descriptive file they can send you about TurboRS, and their telecomm program Taz. Hope that helps.

I believe the program sysinfo will tell you this, and lots of other
information about your system. It is on atari.archive.umich.edu, in
Utilities/sysinfo.lzh.

I was using LHArc 3.01 and discovered that if there were extra bytes of garbage at the end of the file, the program would tell me that, but not allow me access to the files in the archive. This happened with more than one archive that a !LHARC.TTP was able to decompress just fine. Has anyone else experienced this problem? Is there a new version that fixes this problem?

3285. "Icon juggler" problems

Newsgroup: comp.sys.atari.st
Date: 1994-05-24 21:00:04 UTC
From: hallvart@ifi.uio.no
Message-ID: <2rtpsk$65g@holmenkollen.ifi.uio.no>
Source record: 186604

I'm currently trying to sort 100s of desktop icons that I've gathered through the net, into different categories, so I can find the ones I'm looking for, quickly.

I have a shareware program called "Icon juggler" which does exactly what I want.
It's very simple, but is great, apart from the problem that it seems to bomb out pretty often :-(
I can't seem to trace WHEN it bombs out, or WHY it happens, but I suspect it has something to do with memory allocation...???
Anyway, the program is by Codehead Technologies and is at version 1.2 (1992).
Is there a newer, improved version around that doesn't bomb all the time, or another similar icon program around?
I guess I also need an "editor" so I can touch-up a few of the icons, and even make my own.
Any suggestions- PD/shareware programs that will do the job?
Which FTP sites?
Thanks.

Hallvard, Oslo, Norway

Up to a few months ago, I used the {slightly illegal} version of TOS 2
which came as an auto folder executable. At the time I noticed that
ICONJUGL would bomb out at seemingly random times WHEN RUNNING UNDER TOS
2! but when I used TOS 1.2 (my native version) it worked just fine.

: I guess I also need an "editor" so I can touch-up a few of the icons, and even make my

: Any suggestions- PD/shareware programs that will do the job?

MAKEICON does the job perfectly. For a more general solution to both
problems, try ORCS - Otto's Resource Construction Set.

As I understood it:

Sinclair originally asked GST to do an operating system for them. The result seems to have been called 68K/OS and wasn't good enough. QDOS was written by Tony Tebby, in rather less time than most people would like to have when writing operating systems. IMHO he did a surprisingly good job, especially by the time the bugs had been cut down a bit...

Tebby has since written SMS2, and also SMSQ (which is much more of a QDOS clone --- it runs on a card which plugs into the ISA bus of a PC.

I believe 68K/OS was actually released separately, but has long since sunk without trace.

As for 68K/OS being SMS --- don't know. I doubt it, but that's just my opinion.

>|> Both worked to a degree and AFAICR SMS was used at the first press

>to my article seems to know what hes on about.

As for compatibility between SMS2 and QDOS... Some QDOS programs will run under SMS2. Of the QDOS programs which *won't* run under SMS2, not all of them will run under all version of QDOS either...

Generally speaking, programs written in C will work on either; programs written for the QDOS pointer environment will work on either; other programs will have to be checked on an individual basis.

(I used QDOS here in Cambridge, QDOS and SMSQ at home, but I've only run into SMS2 on a couple of occasions. Maybe if I come across a cheap 2nd-hand ST...)

Yes, the QDOS file system is not one of the worlds best; the reason for
this is that subdirectories were rather hacked on as an afterthought.

>I assume SMS2 has at least level 2 device drivers, but it"s

I'm told that SMS2 originally included the appropriate code but it was
removed after it turned out to be slowing things down for some reason. I
don't know if this has been solved yet.

>upgrade my system to the lastest version? Thanks.

Well, you would have either TOS 1.0, 1.2, or 1.4. Check the "About"
drop down under the left-most part of the screen (I think it's the Atari
fuji - but I can't tell with Geneva loaded in at the moment). Anyways,
it'll have a copyright date(s). If it says 11/20/85 (my 16th birthday come
to think about it :-) then it is TOS 1.0...

Or get a copy of some kind of "system information" program (which usually
have a name like SYSINFO or something similar). You can snag a couple of
these from atari.archive.umich.edu - they generally will give you your
TOS version among other things...

The latest version of TOS *that is easy to pop into your system* is TOS 1.4.
The latest TOS you CAN put in your system is TOS 2.06 (you need a TEAC board
or something like that to use 2.0x). So yep, it is possible to upgrade
the system... (you might think of getting a memory upgrade as well,
believe me, it's worth it :-)

I think the problem ist that the program needs a special joystick for the
left extended joystick ports. These joysticks should be used at the atari
jaguar.

TEC that is (Tos Extension Card) which adds 2,06 and lets you switch between this and the old TOS in the machine, so as to avoid incompatibilities with certain software.

Message-ID: <1994May25.035747.16504@ultb.isc.rit.edu>
Source record: 186780

Thanks to all that helped me with my earlier question on getting ProTracker. I finally managed to get a working copy of ProTracker ST 2.0s only to realized that as far as I can tell from playing around and reading the docs, that it will not work for me. It reads *.SPL samples, outputs sound through the Replay 4 and doesn't have a high enough frequency. I am running on a 1040ST(F) using a Replay 16 Cartridge and have 16-Bit samples. I like the set-up of the Sequencer built into the Replay 16 Editor, but unfortunately, it is only a 1-Track sequencer. If I could get a sequencer that functions similar to this one and plays sound through a Replay 16 (esp. *.AVR sample files), plus has more than one track (four?), that would be great. Any help would be much appreciated. I tried to get the Octalyse.zip from the umich FTP site; it downloaded and unzipped fine, but when I loaded it, it started to load and then the computer resetted. Perhaps this is due to an older version of TOS (don't know the version, but I had this thing since the summer of 1987) or not enough memory (1 Meg, but I would expect a message telling me I didn't have enough memory). Thanks for any help. BTW, does the Replay 16 Cartridge and software work on the Falcon? Thanks again.

Theron

> need to if headphones were connected) as is the microphone jack on the Falcon,
> as it would need to if a Microphone were connected. So I have twice the power
> that is needed going through the connection.....

well, you have to use a special cable if you like to connect your walkman or
hifi-rack with the falcon. you can do it yourself, it's not very difficult and not
expensive.
All what you need is a cable and two resistance (i used R=220k Ohm):

```
------------- [ R ]--------------
| ----------|=== Line Left
Falcon030 Mic ===|---------------------|
| ----------|=== Line Right
--------------[ R ]--------------
```

i hope you understand this "scheme", it's not easy to "draw" with the news tool...

3311. Compiling Mint109 ....

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 06:43:34 UTC
From: mbaffoni@farad.elee.calpoly.edu
Message-ID: <1994May25.064334.124641@zeus.aix.calpoly.edu>
Source record: 186613

Hi all,

I was trying to compile the Mint109 sources but ran into a problem.
I edited the make, and ran make. It did all the .c compiles fine, but when
it started compiling context.s, it had lots of warnings and would ignore all
of the code. The weird thing isthat it would say that it was ignoring
comments as well as perfectly good asm code.

It invokes with "gcc -mshort -o context.o context.s". I am using Gcc
2.5.8, gcc-as 1.38 PL 4, TT, lots o' ram, MTOS. Using the -multitos and
-donly030 flags, and using bison.

Any and all help is really welcome!

3317. NEW: EVEREST 3.3

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 09:02:00 UTC
From: Christian_Dalichow@ki.maus.de
Message-ID: <199405251102.a64290@ki.maus.de>
Source record: 186424

Hi there,

our gateway was dead for a few weeks, so I'm not sure you've got this message
outside the mausnet. So once again:

-
All I want to say is: Everest 3.3 is out!

Everest is this nice and easy ASCII-texteditor, full GEM-compatible, runs on
every ATARI (ST or better) with all resolutions/graphiccards and with every
known TOS, MAG!X, Multitos etc.

Everest is Shareware, its not a demoversion and the fee is only 20 DM or 15
US$, payable in every currency (UK-user please read EVEREST.DOC).

I don't know how you can get it, because I cannot upload Everest on a FTP-
Server. But I will ask someone to do it. So please have a look for it.

Or:
If you are rich enough to call Germany dial your international access-code,
followed by 49 4322 6501. In this mailbox you surely find Everest... :-)))

The archivename should be: EVER_E33.TOS

But whats new? Here we go:

Version 3.3 30-4-1994
-Search and replace improved (faster and less bugs).
-Option to disable the auto-reverse direction in the search/replace dialogs, much requested.
-'Whole word' option added to the search/replace dialogs.
-Better menu structure in the 'Block' and 'Search' menus.
-New 'Replace selection' and 'Select word' menu options.
-'Compose' now works correctly in any mode with Everest.
-The cursor column position is maintained after a 'Delete line'.
-Line feeds within abbreviations now possible. 1000 lines max.
-ST-Guide support implemented.
-'vst_unload_fonts' system call implemented to avoid some problems with AMC-GDOS.
-It's now possible to click on the text to select dialog options.

For questions, problems or whatever contact me. UK-user please read the EVEREST.DOC...

so long, Christian

Christian_Dalichow@ki.maus.de

3318. EVEREST 3.3: bug fixed!

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 09:07:00 UTC
From: Christian_Dalichow@ki.maus.de
Message-ID: <199405251107.a64291@ki.maus.de>
Source record: 186421

Hi there.

In this new Everest 3.3 from 30.4.94 is a little bug:

-Line feeds within abbreviations now possible. 1000 lines max.

Here you get problems by using abbreviations like "test" and "tested".

But a corrected version is on the way.

We have changed the archivename:

old version 3.3: EVER_E33.TOS
new version 3.3: EVER_33E.TOS

:-)

Anyway...

If you have any problems with Everest, contact me! We will answer every message, even if you are not reg. user.

Also we are interested to know the countries Everest is well known. So please
write a message, if you are not living in the USA, Canada, The Netherlands,
Scandinavia, France, Austria, UK, Switzerland and of course Germany...

so long, Christian

Christian_Dalichow@ki.maus.de

: >
: >It's not just 30k "bigger" In this 30k you'll find TCP-Support. That
: >means you can now compile and run most TCP/IP Clients. I already

: Fine, I knew that the extra 30K was for TCP support - but wasn't sure if
: it had been completed.

: What worries me is that I just can't get 2 machines running 0.4 to talk
: to each other, or even one with 0.3 and one with 0.4. I just can't see what
: I'm doing wrong.

Configuring TCP/IP is often a little bit confusing. It sounds to me, as if
there is no problem with the software, it's just a question of configuration.
So here are some points to check:

- Do your machines have a hostname and an IP-Address ? (must be different
four every machine)

- Did you start the Loopback-Net(s) ? (Nameserver ?!?!)

- Did you start the SLIP or PLIP connections ?

- Check your routing !

- You have the tools ifconfig and route. USE THEM !

- most important: RTFM !

There is a detailed description of how to set up a SLIP Connection
in README.SLIP. In release's >=0.4 you also should find a FAQ, in which
Kay answers a lot of questions.

Good Luck Theo

i would like to design an equalizer for the falcon030. i found motorolas dge.asm example. unfortunately it's not documented enough. that means i have no idea, how to apply it, how i can change the volume for each of the 10-bands, ...

could someone give me a hint, where i can find some good informations, or even an example?

thanks
patrick

3321. Problem with GEM.CNF

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 10:08:09 UTC
From: csulw@csv.warwick.ac.uk
Message-ID: <2rv829$gus@chive.csv.warwick.ac.uk>
Source record: 186790
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

Last night I wanted to change the path for GNULIB in my GEM.CNF file,
but when I rebooted, Multitos crashed just as it was setting up
my desktop.

I tried Mint 1.10 and 1.04, and it still crashed, even when it was the
only program I booted with. I deleted the line that I had changed,
and it still crashed !!

I went back to the original mint.cnf and gem.cnf I got on the Multitos disk,
and it worked OK. I managed to my mint.cnf file back to normal, and part of
my gem.cnf,but then it started crashing again.

Can anyone explain why

```
setenv PATH=.,C:\,C:\BIN,C:\LANG\GNU\BIN,C:\TOOLS\ARCHIVE,C:\MULTITOS\TW14W12
setenv ACCPATH=C:\
setenv ACCEXT=ACC,ACX
setenv GEMEXT=PRG,APP,GTP,ACC
setenv TOSEXT=TOS,TTP
setenv SHSHOW=C:\MULTITOS\VIEWER.APP
setenv SHPRINT=C:\MULTITOS\LPR.APP
setenv TOSRUN=C:\MULTITOS\TW14W12\RUNTOS.PRG
```

works as a GEM.CNF file, as does

```
setenv TMP=C:\TMP
```

but not

```
setenv PATH=.,C:\,C:\BIN,C:\LANG\GNU\BIN,C:\TOOLS\ARCHIVE,C:\MULTITOS\TW14W12
setenv ACCPATH=C:\
setenv ACCEXT=ACC,ACX
setenv GEMEXT=PRG,APP,GTP,ACC
setenv TOSEXT=TOS,TTP
setenv SHSHOW=C:\MULTITOS\VIEWER.APP
setenv SHPRINT=C:\MULTITOS\LPR.APP
setenv TOSRUN=C:\MULTITOS\TW14W12\RUNTOS.PRG
setenv TMP=C:\TMP
```

or infact anything longer than the first example, even though my original
gem.cnf is much longer.

I'd really appreciate some ideas here, as this problem is driving me _nuts_ !!

Thanks,

Paul

> Cheers,
> Dave.

Just put the .PRG into your AUTO folder and reboot.
It allows (most) GEM applications to use flying dialog boxes.
Click left on a dialogs background, so you should be able to move it.
Let 'em Fly also enables some short keys in dialogs.
Just try ...

3324. MAKE.MONEY.FAST

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 10:47:17 UTC
From: bp@sxb.bsf.alcatel.fr
Message-ID: <358@lacerta.sxb.bsf.alcatel.fr>
Source record: 186703

ATTENTION ALL FAST MONEY MAKING SKEPTICS!
PLEASE READ AND ANALYZE THE FOLLOWING AND DETERMINE IF
$5 IS WORTH KNOWING IF THIS IS REALLY POSSIBLE!!!!!

Dear Friends,

My name is Dave Rhodes. In September 1988 my car was
reposessed and the bill collectors were hounding me like you wouldn't
believe. I was laid off and my unemployment checks had run out. The
only escape I had from the pressure of failure was my computer and my
modem. I longed to turn my advocation into my vocation.
This January 1989 my family and I went on a ten day cruise to
the tropics. I bought a Lincoln Town Car for CASH in Feburary 1989.

I am currently building a home on the West Coast of Florida, with a
private pool, boat slip, and a beautiful view of the bay from my
breakfast room table and patio. I will never have to work again.
Today I am rich! I have earned over $400,000.00 (Four Hundred
Thousand Dollars) to date and will become a millionaire within 4 or 5
months. Anyone can do the same. This money making program works
perfectly every time, 100% of the time. I have NEVER failed to earn
$50,000.00 or more whenever I wanted. Best of all you never have to
leave home except to go to your mailbox or post office.

In October 1988, I received a letter in the mail telling me
how I could earn $50,000 dollars or more whenever I wanted. I was
naturally very skeptical and threw the letter on the desk next to my
computer. It's funny though, when you are desperate, backed into a
corner, your mind does crazy things. I spent a frustating day looking
through the want ads for a job with a future. The pickings were
sparse at best. That night I tried to unwind by booting up my
computer and calling several bulletin boards. I read several of the
message posts and than glanced at the letter next to the computer. All
at once it came to me, I now had the key to my dreams.
I realized that with the power of the computer I could
expand and enhance this money making formula into the most
unbelievable cash flow generator that has ever been created. I
substituted the computer bulletin boards in place of the post office
and electronically did by computer what others were doing 100% by
mail. Now only a few letters are mailed manually. Most of the hard
work is speedily downloaded to other bulletin boards throughout the
world. If you believe that someday you deserve that lucky break that
you have waited for all your life, simply follow the easy instructions
below. Your dreams will come true.

Sincerely yours,
Dave Rhodes

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will have received well over $50,000.00 cash, all yours. This program has remained successful because of the HONESTY and INTEGRETY of the participants. Please continue its success by carefully ADHERING TO THE INSTRUCTIONS.

Welcome to the world of Mail Order! This little business is a little different than most mail order houses. Your product is not solid and tangible, but rather a service. You are in the business of developing Mailing lists. Many large corporations are happy to pay big bucks for quality lists.
(The money made from the mailing lists are secondary to the income which is made from people like yourself requesting that they be included in that list.)

1) IMMEDIATELY mail $1.00 to the first 5 (five) names listed below starting at number 1 through number 5. Send CASH only please (total investment $5.00). Enclose a note with each letter stating: "Please add my name to your mailing list." For other countries the equvielent amount may be sent, e.g. in Hong Kong Send HK$10 as this is the lowest denomination note.
(This is a legitimate service that you are requesting and you are paying $1.00 for this service).

2) REMOVE the name that appears number 1 on the list. Move the other 9 names up one position. (Number 2 will become number 1 and number 3 will become number 2, etc.)

Place your name, address and zip code in the number 10 position.

3) Post the new letter with your name in the number 10 position into 10 (Ten) separate bulletin boards in the message base or to the file section. Call the file, MAKE.MONEY.FAST.

4) Within 60 days you will receive over $50,000.00 in CASH. Keep a copy of this file for yourself so that you can use it again and again whenever you need money. As soon as you mail out these letters you are automatically in the mail order business and people are sending you $1.00 to be placed on your mailing list. This list can than be rented to a list broker that can be found in the Yellow Pages for additional income on a regular basis. The list will become more valuable as it grows in size. This is a service. This is perfectly legal. If you have any doubts, refer to Title 18, Sec. 1302 & 1341 of the postal lottery laws.

NOTE: Make sure you retain EVERY Name and Address sent to you, either on computer or hard copy, but do not discard the names and notes they send you. This is PROOF that you are truely providing a service and should the IRS or some other Government Agency question

you, you can provide them with this proof!

Remember as each post is downloaded and the instructions carefully followed, five members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the number five position you will be receiving thousands of dollars in cash!

The following letters were written by participating members in this program.

To Whom It May Concern:

About six months ago I received the enclosed post in letter form. I ignored it. I received about five more of the same letter within the next two weeks. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work. I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if other people were as skeptical as I, they wouldn't be too quick to part with Five Dollars. But, I buy lottery tickets weekly in my province and have nothing to show for it but ticket stubs. This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out one dollar in each as directed. Two weeks went by and I didn't recieve anything in the mail. The fourth week rolled around and I couldn't believe what happened! I can't say I received $50,000, but it was definitely well over $35,000! For the first time in ten years, I got out of debt. It was great. Of course, it didn't take me long to go through my earnings so I am using this excellent money opportunity once again. Follow the instructions and get ready to enjoy.

Please send a copy of this letter along with the enclosed letter so together we can convince people who are skeptical that it really works!
Good Luck,
Charles Kust
St Agathe Que.

Another letter:

I tried a similar program in which the cost was $5.00 per response. In that one the return was about 3%. Since I did not have a modem I sent out letters regular mail. I created a few mailing labels and printed out all of the labels on pressure sensitive tape. The first mailing that

I used the $1.00 dollar per reponse approach I started to get return mail in just over one week! I sent out 200 letters instead of 100 that is required if you use the mail instead of the bulletion boards. Additionally, I included as many friends, relatives, classmates, that I could think of in order to encourage their participation if they happened to recognize my name, so my percentage of gain was higher. I am trying again with 500 letters to see if I surpass the $141,000 of the last time. You just won't believe it until you try.

Best Wishes,
Mark Garner
Dallas Texas

additional notes:

This system works equally well if mailed out manually. Mind you it takes more effort to hand address the envelopes and the cost goes up proportionately to cover the postage and envelopes. You must also photo copy the instructions, cross out the name in number one position, write in your name in the number ten slot and change the rest of the numbers accordingly. (It might be neater to use white out or paste over the names.) In order to achieve the same results you must send out the $1.00 dollar to the first five names and then send out another 100 letters with copies of the program enclosed. It has been suggested not to put a return address on the outside of the envelope in order to encourage the recipient to open it. The return will approximate that then received from the posts listed on the bulletin boards.

Hello, my name is Steve Prester. As you may have noticed I'm the tenth name on this list, so I do not have a rags-to-riches story to tell here. However, I did make a phone call to the 2nd name on this list, Ernest Goyette. Did he have a rags to riches story to tell? Not exactly, but then I found out that he did not follow the instructions precisely. You see, Ernest lost faith in the program before he had finished following instructions. He only uploaded this file on one BBS, which happens to be operated by Darryl McGinnis, the 3rd name on this list. Ernest told me that he has received $92.00 to date (1/6/90). I realize this is far from the $50,000.00 promised at the first of this file, yet one must keep two things in mind:

1. $92.00 is almost 10 times his initial investment, and it only took about an hour of his time (there's nothing to lose).

2. This program works mathematically on an exponential scale. In other words, for every one BBS that this file is uploaded onto, it should spread to at least ten other BBSs and possibly a whole lot more. So, if Ernest had uploaded his file on all ten BBSs, he should have at least gotten a hundred-fold of what he has, which would be $9200.00. Not bad for a few hours work and a $6.25 investment (including postage).
Finally, I would like to exhort those who become involved in this program to maintain its integrity by being honest. It is the only way that it can possibly pay off. In other words, be sure to enter your name at the bottom of the list and not in one of the top five positions (actually this would be robbing yourself since it is while your name is in the lower positions that it gets multiplied exponentially over hundreds of BBSs). And, of course, send your $1.00 off to the first five names. As I write this I have not made a penny (that's because I have not uploaded this yet), but I thought you might like to hear from someone at the bottom of the list, instead of someone claiming rags-to-riches. I hope such is true, and I'm sure it will be if we all stick with it. The potential is definitely here!

P.S. Call me if you get rich.

Well, now I'm #10! I knew a guy from school
who told me about one he did like this one. I did
not believe him at first, but last time I saw him
he had already made over $2000.00 in only 2 months.

If everyone does it honestly it'll definitly work!
So I'm going to be honest and do it too!

How can you lose by spending only $5.00
I'm getting married soon and could really
use a few extra dollars!!!!
Pass it on and make it work!!!!!

"JOE"

Really? Most people I know that have Ataris swear by NVDI. It is *essential*
if you have a Falcon. Maybe your friends had old versions? Maybe they
had some other weird program that clashed with NVDI? You have to be careful
of the ordering of NVDI and other programs in the AUTO folder, but I would
be stuffed without it.

If you download files with Xmodem or Ymodem you will get some extra
bytes at the end (Xmodem files must are dividable by 128 and Ymodem
by 1024), but this should not be a problem (anyway, if the Xmodem or
Ymodem protocol is smart and fills up this extra space with CTRL-Z's
as it should there are programs to strip off these extra bytes).

>They were wrong - NVDI is the most compatible, useful utility I own. W
>it can (sometimes) do is show up bad code in other people's programs.

I some of my programs the cursor disappers with NVDI, very irritating,
and I use only legal VT-52 calls to turn it on/off. The problem is not
there with QuickST3 (I find QuickST3 more compatible on my MEGA STE).

3332. QUESTION: Using an PC hard-disk with a 520 ST ?

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 11:50:04 UTC
From: gl@comlab.ox.ac.uk
Message-ID: <1994May25.115004.15832@msc2.comlab.ox.ac.uk>
Source record: 186794
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello!

Is it possible to use an IBM PC IDE-type hard disk with an ATARI 520 STF ?
I ask this question because I have the opportunity to get a (relatively small)
PC hard-disk, and it would be a good way to "upgrade" my 520ST!
Is the HD-connector at the back of my 520ST a special one ? And, if it works,
how to declare this hard-disk?

Thanks for any information.

Gael

Eh? Most non-pro microphones don't need power, and I don't believe that the
Falcon provides it. The headphone socket on your Walkman will output at too
high a level for a mic-level input. You need an attenuator, or get your
Falcon modified for line-level input. The headphone output level is likely to
be close enough to line-level.

ST-World (RIP) carried a series of article called 'advanced graphics', written by the guy who wrote Magic Fly, and this had Assembler routines to do everything from scrolling through sprites, right up to 3d polygons, all using custom routines in assembler....the articles are well worth reading as the source code is there to.

-> released? Does it exist at all? Who knows more about it?
->
-> I coulda sworn someone on GEnie mentioned getting one, so I don't
-> think it's vaporware. I don't have any more info at the moment, but
-> if I can track down some messages on GEnie about it, I will capture
-> them and post them (hope they don't mind :-)

Cybercube Research Ltd. developed and produces the CyReL CaTTamaran
TT030 Accelerator which can boost the performance of the TT up to 150%!

Here a few more details about the CyReL CaTTamaran:

= small board for internal installation in a TT030
(must be one of the newer motherboards _without_ the CPU
daughterboard for a quick and easy installation)

= most TT users will get away with NO soldering at all

= you do not need costly caches or a new CPU. The CaTTamaran
will accelerate your existing system.

= performance: CPU goes up to 150%, FPU up to 160%, RAM accesses
will be sped up to 180% and ROM accesses to 140%
(measured with GEM-Bench)
Speedometer index: 839% faster than an ordinary ST

= cost: SRP US $99

Look out for the press releases and the CyReL Electro ADs to be uploaded
on various ftp sites in a week or so, or check your favourite Atari
magazine for advertisements.

If you have any additional questions, please let me know.

Ralf.

Or you could ask me for a beta version of mgif 4.4. ;-)

Mgif has a good selection of image processing functions (no one has
asked for anything new so far...) and is mostly very quick.
AIM is probably more powerful, but it has been a while since I looked
at it. I don't think it handles colour half as well as mgif 4.4.
GIP looks very basic from what I've seen in the magazines, but I've
not actually tried it.

The new mgif uses GEM menus/dialogs and runs under MultiTOS, so it's
much easier to use than before.

So far it's only possible to load JPEG/GIF/Targa/PPM/PI? and save
as GIF/Targa/PPM, but I will add (X)IMG save/load as well before the
release.

--
As always, if anyone would like to try out the latest beta version,
mail me. You don't have to hunt for bugs all the time, just let me
know what you think etc.
If you've got an earlier beta of 4.4, don't hesitate to ask for a
newer one, but I'd sure like some comments on the old one too. ;-)

NVDI v2.50 doesn't handle Setscreen (XBIOS #5) correct on the Falcon030.

I think I have the same version (dunno if it was ever)
updated...

One thing I did notice is that if you try using it with MiNT loaded
in, things seem to crash for me :-O

Whenever Geneva finally becomes MiNT-friendly, then it won't matter,
because I can load and unload ACCessories on the fly under Geneva
anyways...

Well, actually my Falcon does provide 9V phantom power on the microphone input
socket (as measured a few weeks ago). It would have been nice though if Atari
had mentioned that somewhere in the standard docs you get with the Falcon.

Two things you can try for 50 Hz on your falcon. The first is FalconSX
the desk accessory. I believe it has a 50hz option.
The second is adjust your TV set or monitor. I successfully adjusted one
of my 1224s that I've had to work with either 50 or 60 Hz. Now that was nice!
One thing though just a personal thought. The original 1224's that everyone
likes to taut as so wonderful is IMHO the absolute worst 1224 to use on a
Falcon.

One bought it a while back for his STe. The other JUST got it for his TT.

Right now, I'm using Warp 9 on my Falcon. After I went through hell trying to figure out what order I should put things in the AUTO folder (Warp 9 is VERY sensitive to that and you can't put it first like they say you should) to get every thing to work right, I was able to get speedup in all the display modes except truecolor (which it doesn't support). It only speeds up text, not VDI drawing, which is a disappointment, but since text is used very heavily, it speeds up just about everything. In mono modes, there is a 10-fold speed increase for text, while in 256 color modes, the speedup is marginal, and 16 color modes are still too slow for my taste.

I've been wanting to get NVDI, but it's so expensive, I'm not sure I want to shell out the money.

>Well its works on my STE and a Friends and a Mega ST with Read caches
>on...!!!

I have to disable my ICD caches too, every time I want to play Frontier. Two days ago, however, after the latest hunt/terminate session on the disk (I have a 340Mb Quantum SCSI on order now) it refused to run whatever I did! :-(

Some tracing with MonST showed that, although Frontier loads and relocates nicely, it uses fixed addresses for some things. Those addresses were right in the middle of WINX:ed GEM, BlowUP030, caches etc. Needless to say, that was not very likely to work.

Well, how come it worked before then?

After some thought I remembered that I'd removed the TOSWIN.ACC file from the stuff that gets loaded when there is no MiNT (Why it was ever among those files in the first place is beyond me...). I returned TOSWIN.ACC to its original place and, guess what? Frontier ran without a hitch!

If Frontier runs OK for you, don't change your setup and be glad nothing terrible has happened....

Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy

Hello all.

I need (Ha! *want*) a good DTP to do the company news letter, occaisional promotional material and proofs for the adverts we run. The two main contenders seem to be Calamus and DA's Layout.

The main concern of the boss is that the program should understand text and produce good quality and consistant output (We use TeX and LaTex for internal documants---on the grounds that it is a very clever program)

My interest is to produce stuff that he will accept, be able to get films from and which I can use for the fun of it too.

I have a Falcon 030, 141 MBHD, and we have not yet decided on a printer.

Any ideas anyone?

xavier

re. Recovering partitions. I use KnifeST it's great. One problem though you have to have the partition recognized by the system to use it. So if you get it recognized at boot then you should be able to fix it.

3358. For Sale: Magnavox color monitor/tv for Atari ST

Newsgroup: comp.sys.atari.st
Date: 1994-05-25 18:50:25 UTC
From: tipi@vivaldi.acc.Virginia.EDU
Message-ID: <CqDGC1.Lwr@murdoch.acc.Virginia.EDU>
Source record: 186709

(pardon the double-spacing:my ancient CPM laptop is fussy)

Magnavox 8cm-515 color monitor w/ custom cable for Atari ST.

Better than Atari; 13" (vs. 12), sharper pic, better made,

use with IBM-comp's, Amiga, and composite-video machines

(Atari 8-bit, C=64, VCR, laserdisc player) as well.

640x240, analog & ttl-rgb, & composite-video & green-screen.

* Includes $40 custom 8' cable for Atari ST; separate sound

jack for running sound thru stereo.

* FANTASTIC picture when used w/vcr or ld as hi-res tv; better

than any tv-set! Ideal for one needing both monitor and tv

in a small space. Can even have BOTH on and switch between!

Excellent condition.

$200 or best offer. Call (804)295-9995 or

send email to tipi@vivaldi.acc.virginia.edu

Message-ID: <769932258.AA05703@byte.bbs.no>
Source record: 186708

Does anybody out there have any hands-on experience with the new ST OS SMS2?

After reading the articel in the latest issue of STF about the SMS2, which almost said that it would convert my ST to a cross between an Indy and an AS/400, I got interested. But I find it hard to believe what the articel said.

I also feel that the statement about the ST with SMS to being comparable to a 66Mhz CPU, rather unintresting. Since it did not say anything about what type of application and what type of OS was running on the 66Mhz CPU.

So could anyone comment on this new OS? Wheter or not is really does speed up the ST 8.25 times? And what kind of software that is available for it? Does anyone know if anything by GNU is running on it? Or POV?

I would realy like to render pic's 8.25 times faster..:-)

One other thing if those specs are correct, it would seem logical that fitting such a unit to a TT (or even better a Medusa) would give you a Cray at home :-)

How do I get this program to make the 50hz program run in 60hz? It's the demo that sets the computer to 50hz once it's run. It would be nice if there were a TSR that would force the system back to a certain sync rate.

>Configuring TCP/IP is often a little bit confusing. It sounds to me, as if

>- Check your routing !
>- You have the tools ifconfig and route. USE THEM !

Any hints on how to use 'ifconfig' and 'route' to trace non connections?

Well this is what my main machine does to bring up MiNT-Net:

(loads patched MiNT 1.10, all the .XFS and .XDD drivers and spawns ksh shell)

```
u:/bin/ifconfig sl0 addr 100.0.0.1 dstaddr 100.0.0.2 mtu 4096 up
u:/bin/route add 100.0.0.2 sl0
u:/bin/ifconfig lo0 addr 127.0.0.1 up
u:/bin/route add 127.0.0.0 lo0
u:/bin/ifconfig
u:/bin/route
u:/bin/portmap
u:/usr/etc/inetd
u:/bin/mountd
u:/bin/nfsd
```

This file is unchanged from my (working) 0.3 configuration.

On the other machine the file is much the same, but obviously sets up a route the other way. (100.0.0.2 to 100.0.0.1). Note: this network is *not* connected to the rest of the internet, so the ip addresses aren't meaningful.

>There is a detailed description of how to set up a SLIP Connection

This is what I based my above config file on. I'll have another good read of it though.

>In release's >=0.4 you also should find a FAQ, in which Kay answers
>a lot of questions.

Well - if you note whose name is at the top of that FAQ - you will see I've already asked those questions - and acted on them ;-)

<fx frustrated sigh> Yes, I know it must be my configuration - Kay wouldn't have put out non working software. However its not as though this is the first time I've tried to bring up a working MiNT-Net. I *had* 0.3 working fine (well mostly), but a straight newfile/oldfile replacement upgrade, and suddenly my machines don't want to know. They talk to themselves okay, but just can't see each other.

Roland.

I don't know anything about DA's Layout, although I'd be interested in hearing
about it.

I can, however, highly recommend Calamus SL. We produce everything from
simple flyers to full color brochures to an Atari magazine with the greatest
of ease using Calamus SL. Its output is of the highest quality, the imaging
is very sophistocated and powerful, and if you want consistency, you got it
because Calamus can measure in units of 10^-7 meters and can zoom in to
999999% so you can line things up perfectly. There are printer drivers for
just about everything and the results are superb.

The HP Laserjet 4 seems to me to be a very nice printer.

3385. Reains[D[D[D FOR SALE!

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 05:43:04 UTC
From: Chuck.Zwicky@flight.org
Message-ID: <b8b_9405260535@flight.org>
Source record: 186722

I am selling the following:

AKAI PEQ-6: 6 channels of 7 band, programmable EQ with MIDI.
Single rack space. $325

CASIO FZ-20m rack-mount SAMPLER. 16 bit. Analog filters.
SCSI interface. 8 outputs. Built in graphical editing.
Huge library. $1100

CASIO VZ-8m. 64 oscillator synth module (with some of my best patches) single
rack space. Keyboard/Guitar/Wind controller modes. $250

EMG 81 Humbucking guitar PICKUPS. 1 pair w/controls. $100

E-mu Proformance-1+ piano/organ/bass/vibes module with
enhanced fidelity output modification. $300

Fostex 460 MULTITRACK CASSETTE WITH 8ch MIXER.
Mixer features parametric EQ, mic preamp w/phantom power
on each channel. List price was $2795, sell for $850

Fostex 2016 16ch or dual 8ch MIXER. Rack mount (2 spaces).
New, still in box. $300

KAWAI K-5m additive synth module w/100s of patches. $450

Ovation Preacher solid body electric GUITAR. Mahogany/Gold.$400

POWER AMP. Dual mono construction. Channels matched component
by component to within 0.1% tolerance.
Ideal for studio monitoring. 130 w/ch. $400

SUPRA 2400 baud MODEM. Mint. Box, docs, etc $30

The prices are somewhat negotiable.
Please leave mail or call Chuck @ (612) 872-6698 (voice).
Thanks for reading!

What rubbish. All companies need PR people, no matter what they sell.

The question is whether-and-if-so-when someone will fill Brodie's position.

CEO file contents:
Hi all,

Two questions for the price of one. Perhaps I should have posted them
separately, but... Here we go :

A) Is there a way to read Macintosh disks and files (simple plain vanilla
ASCII) other than getting Spectre ? and BTW what is Aladin ?

B) I found a shop selling use 32bit 1Mb SIMMs for cheap. At the moment I have a
520STE with 1Mb (4 x 256Kb SIMMs). Can I use these 32bit SIMMS to get
2.5Mb ? (they are about 20$ each)

These should be easy ones for you guys :)

Thanx,
Nick

Hendrik Jan Veenstra (hjv@phil.ruu.nl) wrote:

[about the meaning of a "TOS error #35" alert box upon launching
a program]

: Too many files open (no more file handles available).

While it is true that the value -35 (note the minus) is defined
to mean that no more file handles are available, this doesn't
seem very related to the TOS error #35 alert box. I have no
explanation for the number, but from experience I know that this
alert box pops up if the *.PRG file is not a GEMDOS executable.
The most common reasons are (1) corrupted files (GEMDOS header
or relocation table trashed) or (2) files with a .PRG extension
that are no programs. You can check this by saving some text with
a .PRG (or .TOS, .TTP, .APP) extension and then double clicking
it.
Btw, for this reason I think it's not the best idea to distribute
TOS specific readme files with names like readme.tos. They cannot
be viewed by simply double clicking them -- all you view is the
"TOS error #35" alert box...

1. What is STOS ?

Written by Francois Lionet and Constantin Sotiroupolous (Spelling please?)

Published by Mandarin/Europress Software

STOS is the forerunner to the Amiga version, AMOS, AMOS Pro etc..
And its a great shame that STOS hasn't been supported by Mandarin since they released AMOS Pro because there are a lot of people who use their language and get frustrated because they can't call for help!

Mark Montreuil came up with this definition ......

STOS (for ST Operating System) is a programming language based on BASIC (Beginner's All-purpose Symbolic Instruction Code), that makes creating sound, graphics and movement on the Atari 16/32 bit line of computers as painless as possible. STOS has commands that handle input/output, animation, music, logic and program execution in an easy to understand way. A STOS programmer can spend more time on actual game design than on the "fiddly bits".

Many things that were not considered possible, such as changing screen resolutions in the middle of a program or writing Arcade-type games in a BASIC language, are a reality with STOS. Hundreds of quality games, demoes, utilities and educational packages have already been written in STOS.

STOS is a full-featured software development tool. Using STOS, art screens created in specialized paint packages, like Degas, Neo or Crack Art, can be easily used to create basic game graphics. STOS has built-in Sprite, Music, Map, Font and Sound effects generators. You can write some code, and, at a keypress, call up any of the added utilities (called accessories) to work on added features. You can even write your own accesssories, to use at any time.

Machine-code routines can be called from within STOS, and new commands (called extensions), can be written to enhance STOS's functionality. Some extensions that are currently available include 3D, the Missing Link and Misty (see Extensions for further information).

All in all, STOS is the perfect tool to bring your game ideas to reality without having to trudge through reams of machine code!

Cheers Mark for the few above lines on STOS. Anyone else fancy adding more to it ??

---

2. Where do I get hold of it ?

Has been given away with magazine cover disks, ST Format and ST User (I need a list of which ones!). The problem with the versions given away with the magazines is that they were no manuals, however ST Doormat, oops, ST Format will sell you the complete STOS kit. That includes the following:

STOS, STOS Compiler, STOS Maestro (with sampler?)

for around the 60 quid mark. Not sure about this at the moment, until I dig out one of my magazines and have a read.

Also most mail-order firms should stock a copy of STOS. Try to haggle and get some decent prices. Don't buy the Interpreter without buying the Compiler !

Apparently every ST sold in Britain comes free with a copy of STOS with the manual thrown in. Any more information on *exactly* you get would be appreciated. If you have the spare money and you want an extra development machine, then it maybe worth getting hold of one ?

()rm has suggested that you look at bargain buckets in computer shops or check out the odd car-boot sale. But that is ()rms sense of humour !!

---

3. What is it like to program ?

()rm says .....

STOS is BASIC, but a powerful version of BASIC. It has built in sprite handling routines, music commands, sound effects and numerous other routines, functions and commands which can be very useful.

At first glance STOS looks horrible, but after a few weeks of programming it, you will wonder how you ever lived life without it (OK, not the truth, but it IS good for something!)

As STOS is based on BASIC, it is very easy to program, in fact, I'd go so far as saying STOS is the easiest BASIC to write anything in. Everything can be set up very easily, for example, you want to play a sample yeah? Get the sample player extension, whack it in the STOS folder and then re-boot.

(Or for those lucky hard-drive owners, unlike ()rm, copy all the extensions into your STOS folder and leave them there !!)

Now play your sample with the command SAMPLAY.. No need to load routines into a memory bank, peek and poke a few numbers and call it. This is one of the nice things about STOS, its upgradeability..

Pity that the language hasn't been given a major rehaul with all these new functions BUILT IN.

Andrei has this to say on the matter ....

When STOS was designed, it was made to make writing games easy. The programmer would think mostly on the WHAT, rather than the HOW. In other words, it was supposed to make you able tp program games without having to think about how tyour ST works. For example, sprites could easily be displayed, moved, and animated with ease. Unfortunately STOS sprites tended to be a bit slow, but The Missing Link extension replaces STOS sprites with Bobs. Bobs are a bit more tricky to implement (you have to move and animate and erase them yourself), but they are much faster than STOS sprites. There is a similar story for other aspects of the language.

STOS is a BASIC that uses line-numbers. This tends to be messy and often encourages programmers to write "Sphaghetti code" (There are gotos running all over the place). It would have been better if STOS had no line numbers, but would call procedures by their names, and have one command per line which was indented appropriately.

---

4. What extras are available to compliment it ?

STOS Compiler - Actually makes your programs faster (HAHAH!)

STOS Maestro - Sample playback routines for STOS (and sampling hardware depending on which version you buy).

STOS 3D - Add 3D commands to your games. Only drawback is that all the objects have to be loaded from disk each time they are required.

STOS Tracker - Playback tracker tunes, albiet a bit slowley..

Andrei has added this as well .....

I have heard about a program written in STOS which adds proper procedures to STOS and gets rid of line numbers. I believe that this compiles the new type of code into STOS. This was originally listed in a STOS club newsletter, and Goomans have a copy on disk. Does anyone have experience using it?

---

5. Can I *really* write commercial quality games with it ?

Commercial Games

Check out:

Bullet Train (revamped version was released in France a few years ago)
Bumpy
Cartoon Capers (also came with a dual-joystick extension)
Cool Croc Twins
Gilberts Day Out
Prehistorik
Skate Tribe
(We think there's a few more..)

Educational programs

All Fun School programs (also have full STOS source on disk)

Henrietta Series by Lander (also with full STOS source on disk)

Loads of other educational programs by other firms. Some names would be appreciated.

Commercial quality shareware/public domain games

There are also a few examples of top quality shareware games written with STOS. So grab a hold of your favourite PD library and ask for the following:

Grandad & The Quest For The Holey Vest by Ian Scott.
The Glass Buttock of Tharg by Ian Scott.
Grandad II - The Search for Sandwiches by Ian Scott.

Ozone by Nick xxxx (can't remember his surname!) - was turned down by Ocean at the last minute because they found out it was written in STOS.

Pyscho Pig, Sim Pig, Colour Clash, Fatemaster by AnimalSoft.

Plop by ()rm - apparently the freebie you get when you register is better!

Bio Hazard by Les Greenhalgh (full review coming soon!)

Most of the stuff by Andrei (some feature STE 8 player options) of which he himself recommends the following: Linecrash, Mazewar ST, Video Games v0.5 Pacmen, Alienation (currently undergoing a re-write) ?

[Hopefully, after my HND is over and I manage to get hold of a modem, I will do proper reviews of ALL the STOS stuff I have got. The definitive review will be posted in parts as soon as I have the time ! - MUG U.K]

---

6. Are there any books available ?

As far as I know there is the one by Stephen Hill, which was published by Sigma Press. Its title is Games Makers Manual. It teaches you a seperate game style within a chapter, and for the more advanced, gives you the lowdown on writing extensions. Does anyone know if Sigma released an accompanying disk with all the routines typed out ? If not, anyone fancy knocking up a disk since the book has not exactly been supported by Sigma ?

There is a STOS guide published by a PD library, but whether its any good is another matter all together. It is 30 quid and contains some 400 pages of STOS related stuff. Takes you from the complete beginning and shows you how to write arcade, strategy and educational programs. Anyone out there know how good it is ?

Disk Magazines/Newsletters

Not exactly books, but disk magazines are in abundance. Some contain partial STOS sections, whilst there are (or in some cases, were) others which are STOS related and nothing else is mentioned.

Check out:

STOS Bits 1 (now dead - forerunner to HP Source)

HP Source 1,2 (now dead)

STOSSER Disk Magazine (still going - now on issue 11 ?)

ST Programmer (I've only seen one issue!)

Ledgers (had an occasional STOS section)

Maggie (in amongst the swear words was the occasional STOS column)

Anyone know of any other magazines ? Please send in details of whether the magazine is going or not.

Also required is a compilation of what was printed in ST Abuser, ST Doormat and ST Review regards STOS, along with a similar listing of useful routines and articles from STOS Newsletter. Unless, there is already one available.

According to Andrei, New Atari User (still alive?) had a STOS column in the 16-bit suppliment ? Also there is the Atari Magazine, a French mag which also has a STOS column or mentions it occasionally !

There is an online-help program for use with The Missing Link. This handy reference guide will give you the keyword and appropriate parameters for each Missing Link command. Just like Windows Help files on a PC !!

---

7. What are extensions, and where do I get them from ?

Extensions are a way of further expanding STOS. All the following are extensions, Compiler, Maestro, 3D and Tracker (Released in the P.D.)

There are numerous extensions in the public domain. The favourites being MISTY and MISSING LINK, both been written by a group called Top Notch. They add commands which SHOULD have been in STOS from the start.

Les Green (ma2lgj@midge.bath.ac.uk) is in the middle of adding some superb sprite routines to his own extension. It also allows STE hardware screens to be used etc. More details when it is released.

Andrei has sent me the following exhaustive list of extensions available for STOS. It was in two parts, one by Andrei and the other by Les Greenhalgh. I will use Les' version as it lists the FTP sites where most of them can be found. Take it away Les ....

The consise guide to Stos extensions.
By L.J.Greenhalgh

Terminology

a.a = atari archive umich edu in either language or progamming folders
s.w = Shareware
cr = Shareware version is crippled
pd = Public Domain and freely available
GI = Goodman International PD Library
STF = was on an ST Format cover disc

Misty extension by Top Notch Software (sw STF)
Can be found: a.a in both Stosers.zip and Misty.lzh files
Miscellaneous graphics commands including an improved screencopy which can
use any of the STs bitplanes, instead of 4 at a time in STOS.
Excellent stuff.

Missing Link extension Top notch Software (sw cr STF)
Can be found: a.a in Link1.lzh - Link3.lzh
about 50 new gfx commands including replacement sprite commands and
commands for dealing with maps and multiple palettes on screen.
A must have.

Extra extension by Martin Cubbit (pd)
Can be found: a.a extra.zip
loads of miscellaneous commands including cookie reading commands, mirror
and blur sections of screen , paste strings in opaque mode, format text,
detect tos version etc.
Brilliant

Stars extension by Lee Upcroft (pd STF)
Can be found: a.a stossers.zip
Commands for drawing 3D and 2D starfields, very quick.
Excellent.

Blitter extension by Asa Burrows (sw STF)
Can be found: a.a in their uploads folder in blitter.zip
Commands for using the blitter in MegaSTEs, MEGASTs, STEs, Falcons?
Seems a bit slow.

MIDI extension by Asa Burrows (pd STF)
Can be found STF , GI
Commands for using the STs MIDI port.
Never used it.

Stos Vidi extension (c)
Commands for interfacing with the Rombo VIDI digitiser.
Never used it.

Stos Maestro (c)
Commands for playing samples through Stos, excellent although better
performance can be obtained from the Missing Link's Digiplay command.
[AE - I think that TML does not emulate STOS Maestro's reverse playing
abilities]

Stos Pac/Squasher ? (c)
Commands for packing/unpacking all types of memory bank not just pictures.
Never used it. Depacking ability surpassed by Missing Link. TML supports

packers that can pack tighter than STOS Squasher (eg. Pack Ice).
Unbelievably buggy - read docs with Mega Depacker for more information.

STOS Sticks (c) [AE 26-4] Is that Twinstix?
Commands for reading both joy stick ports. Unnecessary, use TML equivalent.

Control Extension by Les Greenhalgh (pd)
Can be found: a.a in uploads directory in blitter.zip
Includes commands for reading a parallel port joystick adaptor, a switch construct for STOS, a super fast add command and other miscellaneous stuff.

Quick Extension by ? (sw?)
Can be found: Stossers disczine
Commands for super fast horizontal scrolling, rasters, stars.
Seems good.

STOS TOME by Aaron Fothergill (c)
Can be found: GI
Commands for drawing maps, irrelevent now the Missing Link exists.

STOS 3D by Voodoo Software (c)
Commands for manipulating 3D objects, unusable unless you have a hard-drive and 1 meg. Too limited, no commands for rotating around current heading and no commands for representing horizons, ground, etc. Very large files. Objects cannot be stored in banks, but have to be loaded with purpose made extension commands.

Other forms of extensions that you know about would be appreciated in this list. As ()rm recently suggested, all those who are in the process of writing an extension, put your heads together and come up with one mother of an extension !!

There are other ways of improving STOS without having to use extensions. These take the form of machine code routines which you pass some variables and call them. A few of them have been taken from the same list as compiled by Les and Andrei.

Some Machine language routines used with STOS

BITCOPY
This is what I believe to be a routine that is similar to Misty's SKOPY command. Top Notch used this in their demos before they wrote MISTY which now makes BITCOPY obsolete.

BORDER
Top and Bottom border overscan in STOS. STOS runs just as normal, except when you use the mouse/joystick/keyboard, the overscan dies. The top of the screen starts as 'physic', and continues as normal as if the screen was greater than 32K in size. Works on STFMs and STEs.
Found on a disk of the Cunning Demo.

OVERSTOS
Full screen overscan. Can only display a static picture. I think this has

problems on STEs. Found on a disk of the Cunning Demo.

RASTER By Neil STewart of Flair
Routine that changes the value of only one colour on the screen. This was later implemented in Son of TML's RASTER command. Can be found on one of the disks from the Cunning Demos by ACO & Flair.

STOS-SPEAK by ?
A patched version of the original SPEAK.PRG - allows you to use speech inside your programs by sending a string of characters to the program.

SPECTRUM (I am not sure of the exact name)
Displays spectrum 512 colour pictures. Very limited as you can only exit from display by pressing space. Shareware (was once on a STF coverdisk. If you register for 15 pounds (A rip-off), you get a version that can display the pictures in a window. I have not got the registered version. This was advertised in ST Format in 1992)

STOS_512 By ?
Routine that splits the screen into several palettes of 512 colours.
This was later implememnted in TML's PALSPLIT command.

TRACKER
An improved mod player. Found on a disk of the Cunning Demo. ()rm is hopefully going to working on an interface to allow the use of the Ninja Replayer routine from within STOS. More news when he has finished failing his degree !

If anyone fancies adding to the above list, then please do. You know where to send any additional information. Apparently larger lists exist of extensions for STOS, but these can be found in STOSSER magazine. If someone can upload or Email a copy of the latest list, I can add them to the above list.

---

8. Recommended programs - commercial & shareware

A *DECENT* art package. Recommended commerical ones are:

Crackart (recommended by ()rm)
Dpaint ST (recommended by: MUG U.K(tm))
NeoChrome Master v2.28 (recommended by: MUG U.K(tm))

A *DECENT* tracker editor. Try not to rip off someone elses work !

Sample-based ones ......

ProTracker 2 by Wizzcat/Deltaforce
Octalyser by ?? (STE only, but has option for 8 channels of music)

Soundchip-based ones

Megatizer by Sector One.
SID Editor by Animal Mine (improved version of Tri-Sound, with SID Emulation)
XLR8 Editor by Sentry

(all the above have the ability to assign 1 channel to play samples)

Without plugging my own stuff too much, if you can find copies of my 'Makin Sweet Music Disks Vols 1-3', they all contained ripped music from games and demos. Each folder on the disk contained the 68000, GFA and STOS replay routines ! If I can get a tune playing in 68000 or GFA, then I don't see why I can't knock up a STOS front-end.

()rms music player program has all the necessary information on screen for setting up and calling the myriads of music available in the ST music-scene.

A STOS Patch program (enables your compiled code to work on ST, TT & Mega STE and even the Falcon !!!)

Currently it is STOS FIX v3.0 by ?? and it is only available from Goodman Enterprises ! Charging for a program which fixes your STOS code and leaves a bloody advert for Goodman on the front of your code .... Monopolistic practicies anyone ? Anyone fancy making a new version without the large Goodmans advert ? Or is that enticing piracy ??

---

9. Miscellaneous Section

"What versions of STOS have come out?"
"What is the History of STOS?"

Both questions answered by Andrei.

STOS 1 was only released in France in early 1988 (published by Jawx).

STOS 2.3 Was released in the UK By Mandarin in November/October 1988

STOS 2.4 Is a patch to remove some bugs in STOS 2.3 and make it work with the compiler (1989)

STOS 2.5 Is a patch to make STOS run on the STE (1989)

STOS 2.6 is a patch to make STOS run on STEs with TOS 1.62 (1990)
If your version of STOS is below 2.6, You must update it immediately, especially the compiler. You will then be able to make programs that run on TOS 1.62

STOS 2.7 (compiler only). Makes programs that use the STOS tracker extension compile. I am not sure whether or not it is nescesary or not if you are not using the tracker extension.

I once remember hearing in 1990 that Francois Lionet was writing a version of STOS called STOS PRO (or STOS PLUS). For some reason, this was abandoned. Francois did have to leave programming to do his military service. I am not sure if he is back yet (not as far as I know as AMOS Pro is waiting to be upgraded to AGA chipset - MUG U.K)

Also, FALCOS was being developed (STOS for the Falcon). Apparently, this project was stopped due to a disagreement between Atari and the developers.

"How to make it not look like STOS!" - Andrei answers a few more questions.

- Try and avoid the 'appear' command (unless the appear you are using is fast).

This tends to give the game away. STOS 'appear' does not let you press a key to speed things up.

- Get rid of the F-key window first.

There is nothing more "Written in STOS" than seeing the F-Key window when you have just loaded a game. Alter this within the compiler settings.

- Change the font.

The Lo-Rez font also gives it away. I personally use the font of the Atari 8-Bit computers.

- Change the mouse pointer - almost as ugly as the AMOS Professional one !

- Different type of cursor - everyone recognises that thick ugly cursor !

- Avoid using the SHOOT and BOOM and BELL commands unless nescesary. Replace them with sound effects from a piece of hacked music ! Try the following:

Count Zero - Killing Game Show (20 SFX)
Mad Max - Numerous pieces have Sound FX embedded
David Whittaker - His fast music may be awful, but most have SFX

- Replace the STOS keyboard click or get rid of it completely. There is a poke to use the standard ST keyboard click from STOS, but I don't remember it. [Details would be nice !!]

- Different windows and File selectors (not sure about the new Windows extension).

You may want to mention that it was written in STOS directly on the title screen, or say this in the documentation. The idea is that as well as letting people know it was written in STOS, it can give the WOW effect if it is good.

Shrinking the size of your compiled code by MUG U.K

Well, this section is fairly easy to do. Follow these simple rules.

If you have ANY other packer not listed here, BIN IT! It is either incompatible with the Falcon, or has a pack ratio similar to that of the original versions of the Jek Packer - ie. rubbish !

Packers - The Definitive List

Speed Packer v3.0 - definitely the best. AUTO Depack program as well
as Self-extracting archives !

Atomic v3.5/v3.6 - second best. Apparently does not work on the Falcon
but I will release some source code that might allow
you to make your own program headers for data file
packed versions of Atomik files.

ICE v2.40 - Stalwart and much used packer. Still used after all
these years. Compatible with the Falcon but it
cannot match the above two for output size.

Anyone recommend any others ?

Depacker Programs

I can heartily recommend the following programs for converting your old packer
formats back into STOS code so you can patch them and repack them to work on
newer machines. Try....

Multi Depack v1.5 (or the leaked preview versions of 2.0/3.0) - I wrote this!
Mega Depacker v2.12 (by Mike Watson)
Naughty Depacker
New Depack (new name for Mega Depacker)

If the program will not depack with any of the above, then there must be
a reason why it won't let you unpack it !!

Well this is the end of the STOS FAQ, designed and written by members of the
STOS Mailing List (stos@bath.ac.uk).

Anyone is welcome and indeed, encouraged to send in alterations and additions
to this FAQ.

We hope you found it useful. Any Public Domain library is allowed to
distribute this FAQ, but please do not distribute any versions lower than
v1.0 as they are pre-release and probably quite embarrassingly small in size.
Also do not forget to credit that this FAQ was generated by members of the
STOS Mailing List.

3391. Re: ST Format issue 59

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 11:31:46 UTC
From: rab2@ukc.ac.uk
Message-ID: <6710@raven.ukc.ac.uk>
Source record: 186719

I subscribe to STF, STR and ST Applications and have nearly every issue of the first 2. STF peaked about a year or so ago and is becoming steadily worse in my opinion - don't think I'll be resubbing. STR is definitely the best - almost a worthy successor to ST World, and STA is fairly interesting, but maybe a bit too technical for my liking.

ST User has never been very good and is currently no better than a comic. I only buy it when there's something good on the disk (i.e. NOT Noisetracker!!!!) or a review of something I'm interested in - the more opinions the better, what with prices being so high in this game.

I sometimes wonder if it's worth spending, er, 12 quid a month on mags when I could be saving up to buy a Falcon, but then how would I find out about anything? I'm not exactly surrounded by Atari dealers!

That'll do for now,

Richard.

3392. Re: NEW ATARI MACHINE (maybe?)

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 11:35:37 UTC
From: rab2@ukc.ac.uk
Message-ID: <6711@raven.ukc.ac.uk>

Hmm. Not that your message is much of a commentary, really, but NVDI is a
great product, the manual is concise but not lacking in detail (even the
english version), and it is as close to bugfree as anything I have
ever used.

Coincidentally, it's also faster than any other accelerator I've used, and
is the only one that works properly under MiNT/MTos (AFAIK).

(just to balance things out 8)

I think when you do a (F)ollowup message to someone (like I'm doing
here) there should be a choice in the header called "Followup-To:" -
just stick the name of the group(s) you want the followup to go
to there, and it should route everything that way for you.

I generally use "alt.flames" as the followup group for my
responses to the net weasels that seem to be appearing of late :-)

>SMS2?

Yup.

>After reading the articel in the latest issue of STF about the SMS2,
>which almost said that it would convert my ST to a cross between an
>Indy and an AS/400,

Not a chance! The reviewer clearly didn't have a clue what they were talking about. Some of the SMS2 publicity that I've seen claims that SMS2 turns 'a games machine into a workstation'. This is hype of the first order, especially when not everyone seems to use the same definition of a 'workstation'.

>I got interested. But I find it hard to believe what the articel said.

Is this the one which claimed SMS2 is a variant of Unix? (It's not, you know.)

>I also feel that the statement about the ST with SMS to being
>comparable to a 66Mhz CPU, rather unintresting.

Untrue would be a better description.

>Since it did not
>say anything about what type of application and what type of OS was
>running on the 66Mhz CPU.
>
>So could anyone comment on this new OS? Wheter or not is really does
>speed up the ST 8.25 times? And what kind of software that is available
>for it?

Quite a bit of software written for QDOS (Sinclair's operating system from way back) will work; SMS2 supplies many of the extra bits that QDOS users have to buy separately, in fact.

>Does anyone know if anything by GNU is running on it? Or POV?

There are ports of Bison, Flex, gzip to QDOS and these *should* work under SMS2 as well, without any changes. But I didn't test them. There's also a port of MicroEMACS 3.11 to QDOS which works well under SMS2.

The 'c68' C compiler as used under QDOS works under SMS2 as well. This is quite convenient when porting GNU or other Unix programs.

>I would realy like to render pic's 8.25 times faster..:-)

Rendering complex (or even simple) images is pretty much independent of the operating system you use, so no gain there.

>One other thing if those specs are correct, it would seem logical that >fitting such a unit to a TT (or even better a Medusa) would give you a >Cray at home :-)

Sorry to disappoint...

Message-ID: <2s2jaf$s7p@usenet.INS.CWRU.Edu>
Source record: 186737

While browsing the other usenet for sale boards, I noticed that
there were complaints about people ripping other people off, and everyone
demanding money before shipment, etc.
I've bought and sold quite a few things on this net. I've had not the
slightest problem with anyone, and have 'met' the nicest people.
Perhaps this is indicative of the togetherness of the Atari community
. . . or perhaps I am just lucky.

Kudos!

3421. ATARI ST FTP LIST!!!

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 17:31:11 UTC
From: hallvart@ifi.uio.no

```

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
---
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
uncompressing .Z and/or .uu.
Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

I agree. I have been buying and selling stuff (mostly in c.s.a.st) for
years over the net, and have never been ripped off. I think this may have
been true in general for the net in past years, but the massive influx of
new and relatively inexperienced users has brought in some bad apples.
Growing pains, I guess.

I believe it is on a.a.u.e under the name of fgdos, or something along those lines. Atari released it back near the begining of Atari Explorer Online. It's a big file, and has a review from someone who didn't like it tacked on. I never encountered their problems though. I will double check for it's file name and repost it here.

Source record: 186413

>Is there any SLIP (Seriell Communication IP) for Atari 1040 ?

Several variations. Check in the TCPIP.FAQ, a new version will be out
soon. I just need to check the format on my Atari first.

>I have got a "net" which does not have any documentation.
>Can I use it to mount a drive from a PC (Linux running there) ?

Where did you get "net" from? There are several different networking
options for your Atari. If you want to actually mount a drive from an DOS
machine you would want to use MIKNET (It is available for both platforms). If
you want to link up with a Linux machine you are probably going to want MiNT
NET and NFS. This will require you to do a recompiling of the MiNT kernal.
There is also a version of Linux being ported to the Atari, but unless I'm
mistaken it is only for the 030 machines.

I believe that some users of MacMiNT have used it as an option instead of MacX. It does give the Mac user access to all the GNU utilities as well such as GCC etc.

I heard that he had accepted a job at a NeXT-step supporting
company, so I dunno? Well, his last official RTC on GEnie is
Friday, so you might want to drop by and ask him yourself and see
what he says...

>Plus Atari have droped out of a lot of shows, you only need a communication
>manager when you have some things to communicate..

Going by that logic, Atari doesn't need a marketing dept or
managerial dept either ;-)

>Plus I don't think Atari has much money to play with these days....

They have to sell Jags, make enough profit, feed it back into
Jag production, etc and hope sales continue to climb in order to
keep a good cash flow going. If they stumble on any of this
process, it'll be tricky...

Oh well, the end of yet another era in the Atari arena...

3431. Civilization Bugs + Info (Atari-ST)

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 20:22:06 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <1994May26.202206.4853@newsserver.rrzn.uni-hannover.de>
Source record: 186581
Cross-posted to: comp.sys.atari.st,rec.games.video.atari

Some time ago, I started a thread about the bugs in the ST version of
civilisation. I have now got round to compiling a list of them.
As there are three (?) versions of Civilization, I have mentioned who has
spotted the bug because some bugs exist in only some versions.
Someone mentioned that they had started a discussion about the bugs in
Civilization on Genie. It would be nice if they could post the results of this
discussion here.
If you are one of the people mentioned below, and some of the information is
incorrect, then mail me telling me the correct information. It would also
be great to associate the bugs with each version.
If you have spotted any bugs that are not on the list, mention them.

KNOWN BUGS:

ae-a@minster.york.ac.uk (could someone tell me which version I appear to have)
+ Playing with floppy disks: When trading technology during negotiations and
you have the animations turned on, the computer crashes.
+ Floppy disk: Sometimes, the disks seem to take forever to read. If you swap
disks while this is happening, the game continues.
+ The main game window goes black when you have a resolution. To restore the
map, move the map cursor, or press 'c'
+ For some strange reason, the keyboard sometimes stops working (The game
plays as normal otherwise). This is annoying because you need the keyboard
to save the game (ie. select which drive). Has anyone else seen this, and is
there a fix for it?
+ I don't know if this is a bug or an intended feature. When you capture
technology from a city you have just conquered, you have to re-invent it.

doucet@laas.fr
+ Disk reading forever caused by two things.
+ Advisory, search never ends. Avoid by turning the instant advice off.
+ When a catastrophic event will appear. The search may be long, but it will
end.
+ Black playing area for revolution
+ Has heard of powergraph bomming, but never seen it himself.
+ Civil disorder after revolution, city display, colours change and game
crashes. (Has got patch to fix it). [Note, I think that this is the patch
that doesn't work on the latest version]

dackerma@magnus.acs.ohio-state.edu
+ (In early versions only) Game crashes when you reach the end. Cure:
Duplicate file SLAM.BBM to SLAM.LBM (or vice versa) and keep both copies.
+ Animation of colony on Alpha centauri: garbage on bottom of screen.
+ Sometimes renames files or at least forgets them in the middle of play.

+ Hard drive once went offline

unrzd6@cd4680fs.rrze.uni-erlangen.de
+ Animation of colony on Alpha centauri: garbage on bottom of screen.
+ Civil disorder after revolution, city display, colours change and game crashes.

D.Oakley-SE1@cs.bham.ac.uk
+ Changing government to republic when one tribe used to be American. Crashes in city display when civil disorder.

cf580@city.ac.uk (Has version 3)
+ Crashing on entry to city due to too much corruption (more corruption than trade)
+ Powergraph overloads and crashes.
+ Screen corruption fixed in version 3 when reaching Alpha Centauri and faces of fallen enemies.

How to play Civilization on a Falcon:
slyster@outb.wimsey.bc.ca
+ Copy files by yerself, do not use install.prg
+ Use Backwards or Falcon SX (8Mhz and ST style bus)

How to play Civilization with the ram, instead of the floppy, On ramdisk (REQUIRES 2.5 Megs or more):
ae-a@minster.york.ac.uk
+ Use a ramdisk instead of floppy (If memory = 2.5Meg, Use maxidisk version 2 or above. 1530K ramdisk. Use pack-ice, Atomik 3.5 or speedpacker 3 to reduce the size of the file GAME.PRG)

Patches and improving gameplay.

dackerma@magnus.acs.ohio-state.edu
+ Has heard of a Pirate version with bug fixes.

slyster@outb.wimsey.bc.ca
+ Heard of hint that Microprose had fixes.

doucet@laas.fr
+ Has got patch to fix crashing during anarchy.

cf580@city.ac.uk
+ Mentions that Civilization on ST is up to version 3 (corruption on Alpha Centauri and faces of fallen leaders fixed)
+ A patch exists to fix negative trade bug, but does not work on version 3.
+ Heard that someone hacked IBM version to include two harder levels. Why doesn't someone do that on the ST.

The June edition of ST format told how you can swap civilizations. Do this if yo are becoming too good. Buld a civilization, and swap with another less powerful civilization. The trick involves editing the save game file.

Andrei Ellman.

PS. How many copies has Civilization sold on the ST? Is there going to be a Civilization II? If not, what is Sid Meier up to?

3432. Populous II easter-eggs

Newsgroup: comp.sys.atari.st
Date: 1994-05-26 20:26:24 UTC
From: ae-a@minster.york.ac.uk
Message-ID: <1994May26.202624.5019@newsserver.rrzn.uni-hannover.de>
Source record: 186586

I don't know anything about a 3DO PC card, but the Jaguar PC card is no
rumor. Sigma Designs of Fremont, California is going to build it. It
doesn't seem pointless to me if it's going to increase the Jaguar
userbase. It can't hurt anyway.

Its fairly safe to assume that SMS2 will *not* increase the performance of
your machine by 825%

>I would realy like to render pic's 8.25 times faster..:-)

And unfortunately your pictures won't render 8.25 times faster.

However SMS2 is a much more efficient OS than MTOS or even TOS, and
the machine will feel faster.

:-)

Roland.

> Tell me what about Signum 3 and Script 3, or have they closed down as well..??

No, not at all closed down - fortunately!

Signum! 3 might well be one of the greatest software ever made for Atari computers. Pity it doesn't (as far as I know..) exist in English.
What comes to Script 3.5.. I love that program, and it's easy to translate it with RSC editor and some patience. Version 3.5 even supports Speedo fonts, and is able to do all kinds of nice things.. Script just isn't any so-called "pro" word processor; it's fairly simple compared to Signum or Papyrus - but very nice, if one doesn't need all the whistles and bells.

P.S - does anybody know, what is going on at GST, SoftLogik, and Compo..? Are GST going to upgrade the Timeworks DTP (Speedo support, etc) as they planned? Is there going to be Page Stream 3 for Atari? What's happening to Chroma Studio 24..??? Has Atari Works been updated since 1.2xxx version - and has the black page problem been fixed yet..?

Please, facts - if somebody knows - not fiction ;-) ! There are more than enough rumours, but little real information floating around.

Thanks..!
Tommi.

Sorry, this is WRONG!.
A LINE-output is comparable with a walkman's headphone-output, so both
make the same problems! The falcon only has micro-inputs, so you have to
solder one 56kOhm-resistor in the left cannel and one in the right to
connect a LINE-output or a middle-loud headphones-output.

You can read this in the MJUZAKK 1.2-documentation
(ftp.uni-erlangen.de...) also.

Yes, Atari will allow binary distribution of MiNT 1.11 (I just checked).
I don't know exactly what the wording of the license will be (we
still have to work that out), nor do I know when we will have time to
do up a version; it probably won't be for several weeks.

And these programs will force the machine to STAY at 60hz even if the application tries to change that? This is a demo we're talking about... I do not have access to the menu bar. The demo is going to the hardware and setting the resolution and sync rate. The only solution would be for the developers to make the program check what sync rate the machine started with, rather than assuming that everyone uses 50hz TV's.

>work on the Falcon? Thanks again.

As for your first problem, it sounds as though you have a ST, not a STe. The
Octalyser (New version coming real soon!) runs only on STe's and Falcons.

As for using Replay 16, why would you want to on a Falcon!? Just get Clarity
or whatever the sampling software is and use that ...

Karl.

Ok, how's this... I just made it up, though I _am_ going to a
multimedia show in Toronto on Saturday, so maybe I'm not really lying!

Atari Hawk/AXP
- 300Mhz Alpha AXP CPU, with 1M cache
- 16M RAM minimum, expandible to 256M
- base system with 340M Fast SCSI-II disk, 2.88M floppy
- 3x speed SCSI-II CD-ROM
- graphics up to 1280x1024x256, 1152x912x16-bit, or 800x600x24-bit
(2M VRAM accelarated video)
- Jaguar audio/visual support chips (for extra texture-mapping muscle
and CD-quality sound)
- $2500 US with 15" Sony Trinitron monitor

Actually, it'd make much more sense for Atari to use a cheap PowerPC or
SPARC chip; both have their roots (sort of) in the Motorola 68k series
(well, PowerPC has more in common with IBM's POWER architecture, but
that's another story).

From: steveg@cseic.saic.com
Message-ID: <24797071@MVB.SAIC.COM>
Source record: 186547

I've used it with no problem. A couple things may be throwing you off.

(1) I think it only runs with monochrome monitors

(2) There are two different executables in the release I had, one was
a UW server to be run on an ST, the other was the client. Don't have
my ST anymore and I forget the .PRG names, but try both. You want the
client.

(3) To get multiple windows you need to start the server on the Unix box

Keep at it, it should work. First thing I did when I go my PeeCee with
Windoze was to locate a version of UW (using it now).

> 2 bombs.
>
> it is just a dodgy unarchived file or what?

The ST end of Unix Windows is a GEM program (probably mono only), and should be run from the desktop. Note that there is also a UNIX end needed. I have two different UW distributions, and they both work fairly well (they each have minor bugs, but they are still quite useful).

It is used in the following way:

1. Run uw.prg, or whatever the executable is called
2. Dial up your UNIX host. At this point, UW acts just like any another terminal program.
3. Start up the UNIX end of the program on the UNIX machine.
4. At this point, you will be able to open more windows on the ST, either by clicking the pertinent button, or by running a special program on the UNIX end (included with the UNIX sources).

It is quite cool, though I wish someone would clean some of the bugs out of it. Hope that helps.

3458. a.a.u.e. Sounds

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 06:32:37 UTC
From: dunham@src.honeywell.com
Message-ID: <2s4465$ggt@moon.src.honeywell.com>
Source record: 186564

I downloaded a bunch of sounds from a.a.u.e, all labeled "*.snd.z". But
when I try to Unpack on the Unix system, it says they aren't packed.
If I try to play the sounds on my ST, they're all noise.

Am I missing something? Or are they all corrupt?

3460. GEM Mail List

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 07:21:35 UTC
From: ogal@cix.compulink.co.uk
Message-ID: <CqG9s0.66G@cix.compulink.co.uk>
Source record: 186591

Hello GEM developer,

IMPORTANT ANNOUNCEMENT FOLLOWS

The GEM user interface has recently matured into a generally non-modal, multi-tasking environment. Thanks to many developers such as 2B (Mag!X), Gribnif (Geneva) and authors of many excellent GEM programs (mainly in Germany, but also in the US, UK and other countries) we now have a very nice environment to work with.

One of the main problems for users, which have been exprssed to me by many users is the lack of standards, or that there are too many standards. It seems the German programmers have got their keyboard shortcuts sorted, but some of their standards contradict the Atari Style Guide as published in the Atari Compendium and the developer docs from Atari.

Since Atari do not seem to be getting invloved in this area, it's about time that some communication started between developers across the globe. The Atari market is too small for too many systems. Both Geneva and Mag!X should maintain a high degree of compatibility, and authors of programs should do as much as possible to keep to the standards.

The problem is now to agree on a standard interface, and the first topic I would like to discuss is the issue of keyboard shortcuts. I have laid out a proposal for a standard and have discussed it at length on CIX - the UK main BBS for ST users/programmers. My proposal is a PROPOSAL, I do not wish to dictate my ideas. I just want a standard to work to.

I invite you alnog with many other developers to take part in this discussion. If we reach agreement, I will personally make sure that the standard is published in several ST magazines, placed on FTP sites and is also available in a printed form at a minimal cost to cover printing cost.

Yat Siu of Lexicor has been kind enough to allow use of his system to start a mail list for this purpose. I have to stress here that Lexicor do not have any 'special' interest in this discussion, although I am sure Yat will want to express his opinions just like everyone else. I urge everyone to put competition aside and to join the mail list. Once we got the keyboard shortcuts standardised we can look at universal implementation of the VA_START protocol, a FAX protocol, adding

menu items to programs (Windows style), enhanced GEM Clipboard
and anything else we think is useful.

The mail list is ready for use, once there are enough people
subscribed I will post my keyboard shortcuts proposal and
discussion can start. I already have incorporated some
ammendments suggested by Wilfried Behne (Mag!X, NVDI).

The lower case "z" indicates the use of GNU Zip. The newer convention is to
use "gz" as the extension for such files. Ask your sysadmin to install
gunzip for you (if it is not there already). Do be sure to buy him/her
a Twinkie.

Message-ID: <1994May27.082357.5292@bradford.ac.uk>
Source record: 186550

On Wed, 25 May 94 21:10:12 GMT, D.M.Hoare wrote:

: Does anyone know anything about the UNIX windows program uw.prg?
: I've downloaded it onto my machine and have got all the bits for
: the UNIX end but dunno how to run it. I have tried from the auto
: folder and running the startgem.prg supplied but it comes up with
: 2 bombs.

I found it to be a very dodgy program as well. I have tried to use it with
my UNIX connection.

But in your case the problems are:
1) Startgem should not be run from the desktop
2) UW Should not be run from the AUTO folder

In fact it should be the other way round!

Whilst you are testing the program, forget Startgem completely, and just
double-click on the UW.PRG icon from the desktop.

You might want to try to leave out the lines with the loopback device, and add instead the lines

```
ifconfig lo0 addr 100.0.0.1 up
route add 100.0.0.1 lo0
```

to be able to access your own computer with its own address. There was a bug in mint-net 0.30, where the loopback address was handled incorrectly. That was fixed in 0.31 and newer.

>rather than assuming that everyone uses 50hz TV's.

They will not force the machine to STAY at 60hz, and you wouldn't want
that even if they could. What you want is to get the sync going with your TV
and or monitor. These demos are not switching the machine to 50Hz, they are
just running at 50hz. You need to actually switch your machine to 50Hz so
that the demo actually looks correct.

Demo coders use 50Hz because it takes up less cpu time than 60Hz, this
allows them to squeeze just a litle bit more out of the machine. But they
aren't setting the sync rate to 50Hz, they are just sending the data out at
50Hz. There is a difference. So try one of the above programs to set your
machine to 50Hz (PAL) before you run your demo and your problem should be
solved.

I believe Atari has stated that they will be producing a JAG-card
for the PC (check the last couple issues of AEO). From what I
get, it will be able to run all Jag-CD games when they come out
(and not cart games). I haven't heard anything re: 3DO(n't)...

Hi Roland,

Roland Givan (rgivan@cix.compulink.co.uk) wrote:
: >Configuring TCP/IP is often a little bit confusing. It sounds to me, as if

: >- Check your routing !
: >- You have the tools ifconfig and route. USE THEM !

: Any hints on how to use 'ifconfig' and 'route' to trace non connections?

: Well this is what my main machine does to bring up MiNT-Net:

: (loads patched MiNT 1.10, all the .XFS and .XDD drivers and spawns ksh shell)

: u:/bin/ifconfig sl0 addr 100.0.0.1 dstaddr 100.0.0.2 mtu 4096 up
: u:/bin/route add 100.0.0.2 sl0

Hmmm, the description of your setup sounds quite ok to me. Perhaps
some other points to check :-) ...

- Are there appropriate entries for hostname and IP-Address in
/etc/hosts and /etc/hostname ? check both machines.

- Try to setup ONE of your machines as nameserver (/etc/resolv.conf).
Use either 100.0.0.1 or 100.0.0.2 but the SAME entry on BOTH machines.
You should now be able to run 'hostlookup' on both machines.
(BTW: if this works ok, forget about the next point.)

- Do both machines work with the same serial line speed ? (stty)

I guess you want to "connect" your machines via NFS ?
I have only on machine, for that reason i didn't work a lot with nfs and
do not know about any debugging-support of the nfs-package. Perhaps you
can find the bug using "nfs-debugging" !?

Good Luck Theo

3475. Faster-Than POV for the Atari ?

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 12:42:36 UTC
From: csulw@csv.warwick.ac.uk
Message-ID: <2s4prs$1sc@comfrey.csv.warwick.ac.uk>
Source record: 186590

Hi,

Recently there has been a set of patches for POV 2 released by someone in Germany, named FasterThan POV. It gives significant speed increases over POV but is still completely compatible with it. A friend of mine has it on his PC, and another has just compiled it for his Archimedes.

Has anyone compiled it for the Atari yet? I'd do it, but I can't even get POV 2.2 to compile correctly!! (It bombs during parsing)

Paul

3476. ANNOUNCEMENT: Edith Professional Desktop Text Editress

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 13:23:55 UTC
From: avg@cwi.nl
Message-ID: <CqGqJv.497@cwi.nl>
Source record: 186510

The demo version of Edith Professional V1.188 has been released. It can be found in the usenet group comp.binaries.atari.st and should appear on the ftp archives soon (has been submitted to ftp.uni-muenster.de and ftp.uni-paderborn.de) and may be freely distributed for non-commercial purposes. Edith Professional 1.2 is available NOW at a price of approx. 110 Dutch guilders including taxes and postage, depending on methods of payment.

A much older version, V1.0 of Edith is already available as shareware. It is from now on *free*, as it doesn't even remotely compare to Edith Professional.

EDITH is one of the most flexible and user-friendly text editors currently existing for any micro computer platform. The program's ability to work with text selections of arbitrary complexity (think of column-based operations such as two-column text formatting), as well as many other new ideas such as visible text blocks and the text data trash can, make powerful editing features accessible to computer users who want a computer program to understand THEIR wishes, and not vice versa.

Other important features are:

- a pleasant learning curve for both naive and expert computer users

- high customizability

- macros, kurzels and TTP filters

- elementary support for binary editing in C format.

- aligned display in proportional fonts, suitable for source code editing.

- desk accessory mode, elaborate support for Gemini and basic support for MultiTOS drag and drop/MiNT domain 1, WINX messages and Speedo. X-windows-type key focus and SUN-style mouse jumps (all configurable).

- 256 colour support

- Project files

- the tab/true tab system allows one to work with small indentation levels without problems with the standard true tab measure of 8 columns.

- innovative user interface design (elaborate keyboard support, a modern generalization of the famous cut/paste text editing metaphor, visualization of all concepts up to text blocks and delicate appearance in colour graphics).

- an honest, well illustrated printed manual provides thorough learning information as well as quick reference.

- 21 on-line reference manual pages

- a very reasonable price level

There is an updated version of the Atari TCP/IP FAQ available. I have sent it to a.a.u.e, ftp.uni-kl.de, ftp.tu-clausthal.de and it should be appearing on other sites afterwards. If you do not have access to getting files across the net, send me mail and I will mail you a copy.

If you see anything that needs to be added please let me know.

Also please take the time to pass this information on to Atari owners that are not on the net.

Thank you all for you help and interest.

Hi,

I currently use E-mail/UseNet News from work but I things may change ... ! If that happens - I want to be able to access these facilities from home on my Mega STe. I'm in the UK and so my first thought would be to buy a 14.4 kbaud modem and get an account on Demon. Some questions:

a) (UK users) Is this the best way to go ? or is there an alternative method. (I could well be in the London area - does this change things ?) I'd really like access to ftp/archie/that sort of stuff as well as just mail/news.

b) Demon needs SLIP software on my computer - I guess there must be some around, but from what I've seen it all requires MiNT. Is that right or can it be done without ? (I tried MiNT a while ago - 0.95 though - but it didn't seem to like the mouse accelerator I was using - something to do with illegal Gem calls I think ... ???)

c) Does this provide for using News/E-mail off-line - the only sensible way to go as far as I can see. If so, what news readers and e-mail programs are available for this sort of setup ?

Basically I guess I'm looking for a beginers (sp?) guide to connecting my ST to the internet. With that in mind I guess e-mail would be the best way - I'll summarise here if there's interest/enough information - but if you feel it's general interest, post away, I'll be watching ! ;-)

Many thanks - in advance as always,

Martin

I just played with this game for the first time last night and was actually moved enough to post about it. This is really a fun litle game. It has nice graphics, some fun digitized sounds and smooth game play. Did I mention how good the graphics were? It also ran flawlessly on my Falcon. So if you are in the mood for a new game and have a litle disk space take the time to grab this file.

That sounds strange - SCSI supports synchronous transfers, but I think the
standard says that it is optional and has to be enabled on a per-target basis.
I have not yet heard about a SCSI device that will *only* work in synchronous
mode.
Further more, synchronous mode does not make much sense on a slow device
with 150 - 600 k/s IMHO.

ML>-does TT's built in scsi port support the standard ?

I think the hardware can do synchronous transfers, but I think there is no
driver to support this.

I just thought of something that might be causing the
bomb-outs. Are you to trying to run Unix Windows (UW) in
an ST *color* mode? If so, I'll bet that's the problem.

If I recall, Unix Windows will only work in ST HI mode,
so you can either go that mode, or I believe it should also
work under a Monochrome emulator such as Sebra. No ST Low or
High supported...

Try it out in monochrome (or monochrome emulation) and let
me know if that does the trick...

Hope this helps...

Why? You are welcome to pass judgement on anyone you like, British, Korean
or Egyptian. I didn't realise I needed to be in any specific position to
pass judgement. Most judges prefer a sitting position, but I don't think
it's compulsory. :-)

Can I pass judgement on American films? computer programs? comedians?
musicians?

>you have enough problems on your _own_ side of the pond.

Enough? You can never have enough problems. Just when you think you had
enough, you get a few more. In any case, I'd rather not have a 'side' of
the pond, unless I can have all sides :-)

>If you want to flame the USA, including our present _or_ past Presidents,
>do us all a favor and take it to some alt.political.bullshit newsgroup!
>
>Grrrr. :-(

OK. But just as a side issue. Many people outside the USA see the American
president as an important if not _the_ leading political figure in the
world. That's why the BBC televised the American elections. I doubt if the
American public is as interested in the British election.

The program is indeed setting the machine to 50hz. They can't send data out, as you put it, because they can do nothing but write to screen memory, as far as that is concerned. The demo is configuring the VIDEL to output to the monitor/TV with a 50hz refresh rate, and my 60hz TV here in the US doesn't handle that. It rolls badly, which is an indication that the computer is outputting at 50hz.

Well I am in the U.S. as well, and my Falcon has never had a problem with
any demos on my TV. The only program I've had any problems with is MiniF1 in
conjunction with the antiquated 1224 I'm currently using. If you would have
taken half the energy it took to blow up on me and used it to get the programs
I suggested and used them you would have seen they work. And for further
information the TV I use on my Falcon from time to time is from the late 70's
so I don't think it has any super slick new system.

Ands the information I gave you it is correct. Having the system
send data to the monitor or tv at 50Hz is completely different from going in
with any of the system switchers and setting your system to 50Hz. One is
has to do with video data, the other with video synch.

Hi all

Just a quick question can NVDI be run from floppy on a 1meg STe?
Could I boot up with the disk in and then run my normal GEM
software or does NVDI keep accessing the disk?

Thanks

Matt. University Of Kent
at Canterbury ####

Shout to Neil, I won't use this again ;-) ^^^^^^^^^^^^^^^^^^

>Atari

Well, Bob Brodie was one of the few Atari folks that you could
reach on a somewhat consistent basis (his monthly chats on GEnie,
the fact that he ran the Atari BBS, etc). You might not always
get the answer you wanted from him (a PR guy's gotta do PR,
not necessarily debriefings) but generally you got an answer anyways.

The question on this side of the pond is whether anyone will
take his place, listening to folks comments, etc regarding
Atari *computers*, etc. Or whether this will be the first
formal "bye-bye" to any of little support the computer
side has had?

As usual with Atari, time will tell (RSN ;-)

>I think this is the only version around. Is there a bug you have found? I
>think it is perfect in every way.

There's about 3 situations I have run into that keep it from
being "perfect" (however, it is quite close :-)

1) if MiNT is loaded, when I try to load something into Chameleon,
the system just freezes up

2) *certain* accessories, when loaded into Chameleon, will *not*
allow themselves to be unloaded from Chameleon; most will work
fine however

3) *certain* accessories want the slot all to themselves - for instance,
I think the DCFormatter background accessory is like this,
and I'm not sure what would happen if you tried loading XCONTROL.ACC
into Chameleon, etc

I'm guessing that #2 is probably the situation that he has
probably experienced...

Oh well, as usual, send flames and other assorted net-junk at me if
I goofed up majorly :-)

3502. "Eco" game info

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 18:51:46 UTC
From: patmc@ch.apollo.hp.com
Message-ID: <CqH5qB.36E@apollo.hp.com>
Source record: 186533

Someone asked about the "eco" game recently. The overall idea is that you start out as a bug and want to evolve into a human. The way you do this is:

1. Find food and eat it
2. Find a mate and reproduce
3. Modify part of the genetic code of your "offspring"
4. Repeat the cycle as your offspring

As a bug, the food you want to find are (I think) small plants, which are indicated by small vertical lines. You will probably have to evade a bunch of other animals right after the game starts before you can concentrate on food. When you see food, walk toward it. When you hit it, the vertical line will start to shrink as you eat the food (I think it will also blink different colors). You also may have to hold the joystick down to eat the food. As you eat the food, the vertical line will blink. As you evolve, I think what you want to eat will change.

There is a skull on the lower right side with a rope or chain hanging from it, and a fire at the bottom of the rope climbing upward. Eating food lengthens the rope. If the fire gets near the top of the rope you starve to death.

There are other icons on the right side that show if you need to eat more - I think a little lunch tray is there if you need to eat.

The finding a mate part is similar, you find a creature that looks like you and walk into it, you may need to hit the fire button as well. I can't remember if there is an icon that indicates you should mate rather than eat. I saw in an old email that after you have enough food, if you hit the fire button you will be told the direction of an appropriate mate (life was never this simple), but I don't remember if that is true.

After you mate, you are in the genetic tuning screen. You get to pick one of your 7 or 8 genes. You can then alter that gene to any of its possible settings and see what the resultant animal would look like. If you have played the game before you should be able to evolve to a human in 8 total cycles or less.

Expect to die many times before you manage to get the hang of avoiding other life forms. When you die, to start the game again you click on one of the four skull icons that appear.

Now that I think about it, the right hand side icons are arranged as 8 boxes at the compass cardinal points, so maybe they indicate what will happen if you hit the fire button and push the joystick in that direction. Maybe.

This is a neat game idea, it needs a little something more to become a game that you would want to play all the way through more than a few times (in my opinion).

Have fun,
Pat McElhatton

3503. codehead bbs

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 19:00:05 UTC

Does anyone know what the current number for the CodeHead BBS is? I read on their system that they would be changing numbers from their old 213 numbers, but the 818 numbers that were listed as replacements yield "that number has been disconnected" messages.

Anybody know the scoop?

3504. Albert TT info...

Newsgroup: comp.sys.atari.st
Date: 1994-05-27 19:03:16 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <LANCER.94May27150317@wpi.WPI.EDU>
Source record: 186427
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

OK, since some people seemed interested from my post:

The Albert TT (or AlberTT) is a VME graphics card for the MegaSTE and TT. There was a version called ISAC which is a Megabus card for the old megas as well.

It does ONE SINGLE resolution: 1024x768 in 16 colors. Older cards could do 800x600 in 16 colors if you wanted, but not both, and Dover no longer sells the 8x6 version...

It seems pretty compatible, from talk on GEnie and a recent article in ST Informer (March 94).

The guy from Dover recently posted to GEnie that he had reduced the price of the Albert TT to $199. It used to be $299 and the ISAC (if they have any more) is still $299.

It requires a multisync monitor capable of "48hz vertical scan rate" and 17 inches is reccommended.

Dover Research can be called at: (612)492-3913

I haven't bought one yet myself 'cause I'm looking for a monitor first! I can't vouch for any of this info being true. It's just what I have read on GEnie and in ST Informer.

I am thinking of getting a good multisync and building either an automatic or manual switchbox so the Albert TT and the MSTE's internal video both go to a single monitor. We'll see...

Martin,

Why don't you just join CIX? It cost 25UKP as a one off charge and
between 4 & 6 pence a minute connection charges, with a minimum charge
of 6.25UKP per month. It gives you access to internet i.e.
ftp,email,archie etc. and you it is in London so it is a local call.
Talk about having all your prayers answered! :-)

Simon Robins (srobins@cix.compulink.co.uk)

I want to get a multisync monitor for my MegaSTE.

I want one which is flexible enough to handle ST low, medium, and high
as well as the output from a graphics card (the Albert TT) and
possibly even a VCR or Jaguar...

In other words, I want the perfect monitor.

Can someone please help fill in the question marks on this list or
suggest what to look for in a monitor? thanks!

mode Vert Horiz res. signal type
AlbertTT 48hz ? 1024x768 ?
ST Low 50/60hz ? 320x200 ?
ST Medium 50/60hz ? 640x200 ?
ST High 70hz ? 640x480 ?
Jag?
TV?
PC?

thanks again!

The only way to get the program to get the program working in 60Hz is to write to the author and say:

Oi! You! I've got a 60Hz monitor and your demo only runs at 50Hz.

Fix it and I'll be a happy man.

Well..there is ALWAYS the Medusa ^_-

It was demonstrated at two SSAG meetings and at yesterdays Computer Zone
Meeting...people could see the speed and performance of the Medusa, a
direct comparison was made between TT and Medusa side by side..truly astounding

The Medusa was about 4-6 times faster (not counting graphics)

Just a friendly reminder...Jeff Minter will be this month's guest on the
Cleveland Free-Net Atari SIG's monthly conferences...

Jeff Minter is the author to the Jaguar smash hit Tempest 2000 as well as
such popular ST titles as llamaTron, llamaZap, and Hardcore...

The conference will be held at 7pm EDT May 29, 1994 on the Free-Net's
local IRC, channel #Atari.

Since this is being held on the local IRC, persons wanting to attend must
already have an account...

To connect to the Free-Net:

telnet freenet-in-{a,b,c}.cwru.edu
or 129.22.8.51 or 129.22.8.32

Once connected, at any "Your Choice ==>" prompt type 'go irc' then choose
option '9' to join the IRC. For COMPLETE instructions (you better read this
if you never used the IRC) type 'go atari' at any "Your Choice ==>" prompt
then select option '4' then enter '1364' ... this will present you with a
message titled "Crash Course in IRC" ...

This same help file is available in the may 1994 issue of C.A.I.N. newsletter.

A transcript to this conference will be printed in the June issue of C.A.I.N.

Send e-mail to xx004@po.cwru.edu to request this newsletter.

If you would like to attend future conferences, please apply for an account
on the cleveland free-net...it's absolutely free...Additionally, it'll
provide you free access to our Atari SIG, a very comprehensive resource to
all of Atari's platforms...

Hope to see you all on the conference!

-Mark Leair

%In article M09yOORagPc@semprini.waterloo-rdp.on.ca, cherborth@semprini.waterloo-rdp.on.ca (Chris Herborth) writes:
%>Ok, how's this...

%>Atari Hawk/AXP
%>- 300Mhz Alpha AXP CPU, with 1M cache
%>- 16M RAM minimum, expandible to 256M
%>- base system with 340M Fast SCSI-II disk, 2.88M floppy
%>- 3x speed SCSI-II CD-ROM
%>- graphics up to 1280x1024x256, 1152x912x16-bit, or 800x600x24-bit
%> (2M VRAM accelarated video)
%>- Jaguar audio/visual support chips (for extra texture-mapping muscle
%> and CD-quality sound)
%>- $2500 US with 15" Sony Trinitron monitor

Aw, a machine of this class oughta have a 1 gig drive, at least.
Hm, and I'd figure 17" minimum for the screen. Dunno where that 256M ceiling on tha RAM came from, that oughta get outta there too. And lessee, it's an Alpha, so 64 bit wide memory is a minimum, let's call it 128 bits wide, 4-way interleaved. That should do it. That'd be real slick.

Yes, take a look in a.a.u.e and get the 930430TC.xxx archive. This is by
PE1CHL and is very good indeed. If you have problems, mail me - I use it
extensively here to run full service Amatuer Radio TCP/IP facils over
11 radio ports and use SLIP links across the different machines.

Yes there is. You just remove the circuit that is responsible for
this.

I had a similar problem. I put a variable resistor and removed the
bass boost. I can now connect a CD that has line output.

I believe the name says it all - a lupe in a window.
But why don't you just try it - and you can see for yourself!

That's the way i deal with new software. First try it - then read the docs (if necessary :-)

if you have a 14.4 modem there is _no_ way you can make it operate above
14.4 k baud no matter what software you use. The 19200 is the closest to 14.4
that the computer come to but it will then default to the baud rate that you
connect to.
The only idea I have is to get one of the new 28.8 baud modems, I prefer a Zoom

If you use LINE level signals then say goodbye to the Falcon inputs.
The right way is to use a source with a phono output so you can control
the volume.

> If you only have the walkman you can use an audio tapered variable

The walkman has powerfull output signal but not so powerfull.
This setup with the variable resistor is more likely to happen if
our friend uses a CD with LINE output. The LINE is 6db more powerfull
than mic signal.

Because very often, MODs must be played in PAL mode (50Hz) otherwise they'll play too fast. (Because almost all MOD replay routines are tied into the vertical blank interrupt ... which means that your refresh rate will effect how often that interrupt runs, and therefore how fast the MOD goes)

And also, very often, demos use timing techniques to do certain effects... and that usually demands that your sync rate be specifically set at whichever mode it was programmed in. Many times, palette flipping techniques won't work in 60Hz if they were designed for a 50Hz refresh rate.

Hallo,

zur Ansteuerung meines MIDI-Equipments nutze ich (neben Windows-PC)
auch einen Atari ST. Leider stehen dessen Geri¿½te recht weit auseinander,
so dai¿½ die Originalkabel von Monitor und Maus nicht mehr reichen.

Kann ich fi¿½r das Mauskabel so eine einfache Joystickkabel-
Verli¿½ngerung, wie sie z.B. bei Conrad fi¿½r den Amiga angeboten wird?

Aber wie sieht es fi¿½r die Verli¿½ngerung des Monitorkabels aus?
Da habe ich noch in keinem Katalog etwas gefunden (Conrad,
Vi¿½lkner) ... wo gibt es das denn??

Schonmal vielen Dank fi¿½r die (hoffentlich kommenden) Infos!

>>> BITTE ALS PM, da ich diese Gruppe aus technischen Gri¿½nden nur
sporadisch lesen kann ... :-/

Yes. Absolutely. If you want GEMDOS fonts loaded you can load them,
but you don't need to.

Doug, I have a Supramodem running at 57600+ baud. :-)
Can you tell us which software you are using? That is more likely to be the problem as most older stuff only allows you to go up to 19200 as that is a limit of TOS. HSMODA04.LZH (I think) is an /AUTO folder proggy that will let you use some of the unused low speeds i.e. 50baud etc. and remap them to higher speeds i.e. 19200 thereby getting round the problem with older software. Newer software should be looking for the RSVF cookie anyway to determine the available speeds.

Heat & Serve C (look on atari.archive.umich.edu in Languages for
hsc13*) will work from floppies.

There's no way you could do C++ programming without a hard drive and at
least 4M of RAM. And it's very painful on an ST.

There are several on atari.archive.umich.edu and most other Atari FTP
sites around.

> Also can I get a 'C++' compiler from anywhere or anyone????

The only C++ compiler for the Atari platform is GNU C++; it'll require
at least 4M of RAM and a hard drive. It's also on atari.archive.

This is due mostly to the fact that GEM originated on 8088 PCs; 64k is the largest chunk of data that anything < a '386 can look at at once, thanks to Intel's silly segmented memory. Even a '386, '486, or Pentium can only see 64k of anything at a time if it's running DOS. To get past this "64k" barrier (you've heard of the 640k barrier? this is worse), programmers have to do nasty things to their pointers, so it's much, much easier to put some arbitrary limit on data structure size.

Bad programming, propagated to the Atari thanks to Intel. Believe it or not!

I've tried loading/using/unloading xcontrol.acc into chameleon, and it works just fine! I wish ALL programs would unload properly though, but some don't- is it because they are badly written and don't follow the general guidelines for programming?

Source record: 186364

Well, I've just got back from the Gasteiner Atari/C= show. It appears they're as pathetic at organising shows as they are at selling Atari stuff. There must have been ooooh 12 stalls there. Maybe more. Definately not more than 20. I'm glad I didn't have to pay to get in, or I'd have felt ripped off. God help those that don't get sent complementary tickets!!

While I was there, I talked to HiSoft. They said they weren't pulling out of the atari market, but that there were no new products under development. And the same for the C= line, with C='s financial troubles being the main cause. They'll still provide service, but basically it looks as though they're going to move to PC's. Major pity, that.

Simon.

I don't think this is the problem - the thing is that most modern TVs can
handle both 50 and 60Hz, they just automatically switch. If they don't -
you'll be shagged with a lot of demos.

The eternal 50 Hz debate : Why do demos which only run at 50 Hz.
I think that one obvious reason is simply that most demo-coders on Falcon are old ST demo-coders, and they still have their RVB monitor.
Another reason, much more important, is that, to be smooth, a demo must run with an image each frame => 50 frames at 50 Hz, but 60 frames at 60 Hz , an XX frames at XX Hz ! Of course, if you're at more than 70 Hz, I think you can do an image each two frames and still be smooth, but it's not trueat 60 Hz. So, here's the dilemna : either you have less time to do you're demo (1/60th of a second instead of 1/50th, and it's a HUGE diffe-rence) , or you do it running at 30 frames a second, with makes it less smooth...

>Are we talking F030 specific code here?
>I'm a programmer so feel free to mail an example in C or assembly!
>
> /
>/ Daniel

I have never looked for code to make it happen. Why would you? It just happens. Most european programmers code and assume 50Hz running on the system. Makes sense that's their video standard and that's what their machines run at. But American machines operate at a standard of 60Hz, this is our video standard so again it makes sense.

Now when an american boots their machine with a european demo, which is assuming the system is running at 50Hz, you get rolling screens. Now if before you run this demo, you instead switch your system to PAL or 50Hz whatever you want to call it, then run the demo VOILA it works. The machine now knows what it's doing. The same thing plagued amiga owners. If you are lucky you can adjust your TV or monitor so that it's close enough to both not to care. If not you have to rely on switchers.

Again it's not that big of a topic. If you have the problem adjust your set or run a switcher.

8MB of RAM is fairly much required to run X-Windows. This is not particularly caused by any of the evils of Intel - X-Windows is just big.

The fairly large amounts of HD space occur for similar reasons. Moving it all to a 68030 wouldn't result in any major savings.

Of course, if one does not need a GUI, one can run Linux with a mere 4MB of RAM, off of floppies. It won't be terribly functional; the (missing) hundred megs of disk space would be packed with some powerful software.

Roger,

while you can argue that "There is no use for a Multitasking Home Computer at all", the advantages of having a stable well behaved multitasking environment are enormous. Based on my experience, a multitasking OS provides a much more natural interaction channel for the user (unless it's

Windows :). When I run some analysis I don't want to wait until my software is done with it, especially since I can be running a few FTP sessions in the background, browsing Usenet (like now), etc., all done from home and without a major system slowdown. All in all, while not everyone will benefit from a multitasking OS, many users will.

Then again, there is the matter of defining a "home computer". For me my NeXT is pretty much a home computer, for other people a C64 is. But ever since I moved to NEXTSTEP I can't even think of going back to anything that I was using before... if feels like your right hand is missing all of the sudden.

a) You won't be running a C++ compiler without having a hard drive.

b) It is possible to run Sozobon C off of the combination of floppy and RAMdisk. Quite fiddly, not pretty; not fast; but it works.

Having a hard drive makes it all MUCH, MUCH, MUCH easier.

GCC absolutely will not run without a HD. I'm not certain about the commercial products (Pure C, Lattice C); they probably require hard drive.

The video sync was set to 50hz by the program. I don't know what you're
talking about when you refer to sending of video data. I've been a programmer
for many years, a lot of that taken up programming Atari's, and all I know is
that you can set the video hardware to sync to 50hz and 60hz TV's and RGB
monitors. It doesn't matter how you put the data into the screen memory sinc
te video hardware just reads it out of memory when it needs it.

I bought that Eco game once. It would never get past the quote from Darwin.
What was wrong with it? A friend of mine had it and I liked it very much, so
I was disappointing to me that the copy I paid for didn't work.

Eric March (diehl@io.org) wrote:
: Because very often, MODs must be played in PAL mode (50Hz) otherwise they'll
: play too fast. (Because almost all MOD replay routines are tied into the
: vertical blank interrupt ... which means that your refresh rate will effect
: how often that interrupt runs, and therefore how fast the MOD goes)

This is irrelevant. Ever since the European MOD player developers realized
that there are people in the US trying to use their programs, they started
using other ways of controlling the timing of their programs. I wish the demo
writers would do the same thing.

: And also, very often, demos use timing techniques to do certain effects...
: and that usually demands that your sync rate be specifically set at whichever
: mode it was programmed in. Many times, palette flipping techniques won't work
: in 60Hz if they were designed for a 50Hz refresh rate.

Again, use a different way for timing other than video sync.

Marc BOURLON (bourlon@gla.ecoledoc.ibp.fr) wrote:
: The eternal 50 Hz debate : Why do demos which only run at 50 Hz.
: I think that one obvious reason is simply that most demo-coders on Falcon are old ST
: demo-coders, and they still have their RVB monitor.
: Another reason, much more important, is that, to be smooth, a demo must run with an
: image each frame => 50 frames at 50 Hz, but 60 frames at 60 Hz , an XX frames at XX
: Hz ! Of course, if you're at more than 70 Hz, I think you can do an image each two frames
: and still be smooth, but it's not trueat 60 Hz. So, here's the dilemna : either you have
: less time to do you're demo (1/60th of a second instead of 1/50th, and it's a HUGE
diffe-
: rence) , or you do it running at 30 frames a second, with makes it less smooth...

: MB.

Actually, at 50hz, you get 25fps, and at 60hz, you get 30fps. Interlacing,
remember.

One of the excuses given for 50hz demos is the extra time allowed between
display refreshes. On the ST, this was very helpful, and something I proved
to myself when trying to write my own sort of graphics demo.

However, on the Falcon, a much faster machine, this should no longer be
necessary. There should be plenty of time durring the vertical blank at 60hz
to get the work done, regardless of the fact that 320x200xTC has 4 times as
much data to manipulate than ST low.... most ST demos were full screen, while
most Falcon demos I've seen work in a little window on the screen.

The Termfin demo worked very nicely on my TV!

: >> Dan Ackerman

: >Excuse me, but how do you go about if you want to send video data to the TV at
: >50Hz and set the video sync to 60 Hz, as you say is possible?
: >Are we talking F030 specific code here?
: >I'm a programmer so feel free to mail an example in C or assembly!
: >
: > /
: >/ Daniel

: I have never looked for code to make it happen. Why would you? It just
: happens. Most european programmers code and assume 50Hz running on the system.
: Makes sense that's their video standard and that's what their machines run at.
: But American machines operate at a standard of 60Hz, this is our video standard
: so again it makes sense.

: Now when an american boots their machine with a european demo, which is
: assuming the system is running at 50Hz, you get rolling screens. Now if before
: you run this demo, you instead switch your system to PAL or 50Hz whatever you
: want to call it, then run the demo VOILA it works. The machine now knows what
: it's doing. The same thing plagued amiga owners. If you are lucky you can
: adjust your TV or monitor so that it's close enough to both not to care. If
: not you have to rely on switchers.

This is not correct at all. The video Sync is the video sync. Period. It's
purely a hardware thing. If you switch the machine to 50hz mode, the TV rolls
just the same as when the demo switches to 50hz, because IT'S THE SAME THING.
The TV rolls because it's being fed a signal that it does not know how to deal
with. The only solutions are to make sure the computer stays at 60hz, or
tweak the hardware in the TV to handle 50hz.

: Again it's not that big of a topic. If you have the problem adjust your
: set or run a switcher.

Making such an adjustment would be rather difficult, if at all possible. Are
American TV's designed to do that? I doubt it. Switcher? What's that?

It's not the modem you should be worrying about; it's the computer. The problem is that computers earlier than the TT have a serial chip that can't handle higher than 19200 bps for async.

This is getting really assinine. Have you tried setting your sytem to PAL mode yet before you run one of these demos? You certainly don't act like it. FTP ftp.cnam.fr, ftp.uni-kl.de or atari.archive.umich.edu, they all have decent Falcon areas, and all carry FalconSX or NVDI.

Now lets go over the first part for the 287th time. Now when you used to get a game from europe and run it on your american ST what happened? Well if you didn't have a monitor that could sync to 50Hz automatically you got a screwed up display. Now how did we all fix that when that happened? Well some of us whined that the program was incompatible, the rest did one of two things. The first was to run a switcher, in those days it was programs like BOOT50HZ.PRG, this would set your system over to 50Hz and VOILA it ran like a charm. Somewhat flickery for most tastes but it ran. The other method was to take a screw driver at hand and adjust the knobs on the rear of your TV set or monitor. Usually just a litle bit of playing and you again had a perfect picture. No soldering necessary.

I'm not talking about any great feature of the system. I'm just talking about how it works and has worked. Some what a pain, but easy to get around and live with.

```
==========================================================================
>One bought it a while back for his STe. The other JUST got it for his TT.
>
>Right now, I'm using Warp 9 on my Falcon.
==========================================================================

PLEASE! Do not blame MultiTOS for Warp9's problems. Warp9 is horrible.
It and its mother program, Quick ST, are the only accelerators I know
that actually slow down the system! Memory tests and other CPu intensive
tests are slows by 2-3% by using Warp9. This means that Warp9 is getting
into all SORTS of vectors that it shouldn't. And no matter WHAT place
you put Warp9, it re-installs its vectors with the control panel to be
first in the chain.

I used to use Warp9 and wanted to keep the vectors BEFORE MiNt runs
so that my BIOS would be redirectable. Howveer, removing the control
panel meant losing the screen savers and fonts!!

I called technical support, and they just gave me a lecture on how its
all ATARIs fault because MultiTOS has so many problems. I wasn't running
MultiTOS, just MiNT. I said, "Well, I heard NVDI works with MultiTOS".
He says, "Yeah, I heard that too."

Well, obviously, if NVDI can work, than so can Warp9, so its NOT the
fault of MiNT or MultiTOS. All they had to do was remove the vector
manipulation code from the control panel if the MiNt cookie existed.
Instead, they tried to pass the buck.

Well, i sold Warp9 and bought NVDI. I've been loving NVDI ever since.
Its faster, speeds up more, has its own VERY FAST GDOS, and does NOT
slow down CPU operations. I refuse to support a company that tries
to blame their own poor programming on others. PLEASE, don't blame
MultiTOS.

At least, not for Warp9s problems. MultiTOS has its own problems to
be blamed for.

3582. ATARI SYSTEM SALE!

Newsgroup: comp.sys.atari.st
Date: 1994-05-29 08:40:22 UTC
From: alberto@terapin.com
Message-ID: <alberto.4ssi@terapin.com>
Source record: 186478

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
ATARI COMPUTER FOR SALE
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

ATARI 1040 STE - 4 Megabytes of Ram, Tos 1.62, stereo outputs
DMA sound, enhanced joystick ports, 4096 pallete
etc.

ATARI SC1435 - 14' Color Stereo Monitor
Includes swivel stand and stereo cables comming from
the computer. Nice display.

Maxtor LXT 200S - 200 Megabyte 15ms Hard Drive, recently purchased
as an upgrade to a Segate 20 Megabyte Drive.
Installed in original case so there may be room
for another HD. There is an opening in front of
the case which was left after the upgrade so the
case isn't "original". Makes for good ventilation
though. Alot of room at high speed, VERY
very quiet.

ICD Host Adapter Plus w/clock + Software/utils is also installed in
this case. Have the original manual/disk as well as the latest
software upgrade on the hard drive.

Epson LQ-570 - 24 Pin printer, 11 built in fonts, 360x360 dpi
Can use both single sheets/envelopes, etc. or printer paper. Very
nice quality for text/graphics. Has a new ribbon, and a box of
printer paper(if you want it).

Supra 2400 Baud Modem - A modem, they're quite useful. :)

Already installed on the hard drive, all sorts of utilities and
shareware/pd programs. This system is in NEW condition, not used much
and still in boxes with all manuals. It was mainly used for simple
word processing for school using Word Up(included). This is the
perfect system to learn on, with plenty of memory and room to get into
advanced things such as programming(C Compiler on the HD), etc.

Need money bad, so I have to let this all go. Sorry I will __*NOT*__
sell this system in parts whatsoever. If you have any questions or
are interested, please let me know.

Since the prices have gone down SOOO much, I'm asking that you make a
reasonable offer instead of setting a price. Keep in mind the
condition of the system(New) and the amount of use(not much at all).

Mail only please.

Thanks,

alberto@terapin.com

A friend of mine runs his landscaping business using a MegaST.
He has the opportunity to purchase an HP 8-pen plotter
(not flatbed but one of those that stands vertically and
rolls the paper back and forth - large enough to do large
architectural blueprints) and is interested in:

1. Can he drive a plotter from a DTP program like Pagestream
or Calamus?

2. Are there professional-level CAD programs available for
the ST? (He's bought most of the <$100 ones that have
come along over the years, but none have been able
to do the detailed house plans and landscape designs
he needs.)

He's also in the national guard and does drafting there using
AutoCAD and a large flatbed plotter, so he may be spoiled
by these expensive tools... How close can we come with an
Atari solution?

Raah, yet again NOT the graphics, what are they using those machines for
anyway ?

With all this multimedia hype going on, graphics speed is crucial today!!

Well, think again... Any graphics card which is capable of displaying such
high resolutions at such LOW refresh rates is useless in my opinion.

Try thinking of a 17" TV screen right in front of you.. That kind of
flickering drives you mad after a few hours...

At screen sizes from 15" and over, look for a graphics card that can
display at least at 70 Hz (NON-interlaced)! Better a bit lower in
resolution than lower in refresh rate.

I'm working on a Viking monochrome 19" TT monitor and it displays 1280x960
at 71 Hz. When I change over to the VGA monitor (which displays at 60 Hz) I
immediately notice the 'flickering difference'..

Good luck in finding a good combination of monitor and graphics card.

I'm in need of a RAMDisk that will be stable on my MSTE 4/Mono/2.05,
and can coexist with NeoDesk, Warp9, Fpprnt, LED Panel and
some other goodies.

I also need a program to increase the size of my serial port buffers.
I'm using STalker and I'd rtfm, but it's in New York in storage for the
summer (I'm 55 miles from Atari US Headquarters).

Are there any programs that can help me out--preferably available from
aaue? Thanks a lot.

3602. 38400/57600 BPS and Serial 1

Newsgroup: comp.sys.atari.st
Date: 1994-05-29 22:50:27 UTC
From: ggford@cuug.ab.ca
Message-ID: <CqL643.z8@cuug.ab.ca>
Source record: 186301
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have unsucessfully for some time been trying to get my MegaSTE to work at 38400 or 57600 bps with my SupraFaxModem. I have recently discovered that Connect 2.46 lets me set both these speeds when using serial 1 or modem 2. I have tried, sucessfully, to use 57600 on serial 1. The problem is that while this speed appears to work with connect on serial 1, all other programs which I have only seem to work on modem 1. Is there some way to force programs to use Serial 1? If so, is there a way to lock the speed on serial 1? Is there any other way to obtain 38400/57600 bps on a MegaSTE.

Please reply by email to ggford@cuug.ab.ca

Thanks.

3603. Calamas SL and color printing

Newsgroup: comp.sys.atari.st
Date: 1994-05-29 23:04:23 UTC
From: michaelk@pacifier.rain.com
Message-ID: <CqL6rD.9uw@pacifier.rain.com>
Source record: 186392

My set-up consists of a 4 meg Falcon and 80 meg IDE. My printer is a HP DJ560c (which according to the HP manual works fine with 550c drivers). I am working in the 256 color mode. My problem is that I am unable to achieve suitable color print outs. By "suitable" I mean the Calamas SL print-out is nothing like the print outs I get with the screen grabber Image-copy 2. With hardly any parameter adjustments Imagecopy give splended results: no banding, fairly accurate color rendition and 300dpi resolution. With Calamas SL it has been nothing but frustration. I assume I'm not making the correct adjustments in Calamas. I have fiddled with both the "Color Separation" and "Linearity" modules but to no avail. I get results from these modules..i.e. colors muddy or too much or too little intensity. Also I can't seem to get the 300dpi resolution. All print-outs seem as if they were done on a dot-matrix. Can anyone suggest a basic parameter setting for each of the modules to get suitable starting printouts? Do I need to use the "Raster Generator" module in some way to get 300dpi? Any suggestions are much appreciated.......

Michael Kelsey

3606. AGT Adventure Games on the Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-05-29 23:37:17 UTC
From: fnjah@aurora.alaska.edu
Message-ID: <1994May29.153717.1@aurora.alaska.edu>
Source record: 186460

AGT is an adventure game development system to make text adventures that look similar to TADS and Infocom games. It works fine on my ST, but the "enter command" prompt is supposed to be at the bottom of the screen, and it always gets put at the top of the screen on my Falcon. This makes the games basically unplayable.
A while ago I did something that made the games work properly (like taking off certain accessories, or using a certain setting in Backwards) but I can't seem to duplicate whatever it was I did to fix it.
Has anybody else had this problem and found a solution?

It appears to be based on (but more than) the board game `Labyrinth'.

The only problem I had with it was that it was very difficult to see which
way walls went. The graphics should make the walls secondary and the paths
on the floor primary. Instead, I had to turn up the brightness on my
monitor to see the paths. Graphics for the players is very nice though.

***** FACTS *****

PLEASE NOTE: NO Atari ST/STE or MEGA ST will run faster than 19200 baud.

This is a limite of the hard ware, you will have to modify your hard ware if you intend to go fater than 19200 on a ST/STE or MEGA ST...

I do hope this info has been posted in the ATARI FAQ....

==========================================================================
this "64k" barrier (you've heard of the 640k barrier? this is worse),
programmers have to do nasty things to their pointers, so it's much,
much easier to put some arbitrary limit on data structure size.
==========================================================================

In protected mode on a 386, you have 2 more segment registers than
normal, and segments can be any size the programmer wants, which can make
segments a very handy programming tool. I still prefer flat model.

The Graphics were incredibly fast using NVDI ET-4000 and an ET-4000
Graphics Board, HOWEVER I did not include graphics because it was compared to
a NONE NVDI running TT without Graphics board....using the NBM the results
of the medusa offered around 1780% in graphics, as compared to the stock
TT which had like 200-300% graphics results..

Benchmarks were posted on the lexicor-list a while ago..if you like I can
repost them

CEO file contents:
Hi all,

I asked these two question last week but only got one reply. Come on, these aren't hard ones :) So here we go again :

A) Is there any way to read Macintosh disks and files (simple plain vanilla ASCII, I'm not _that_ optimistic) without buying Spectre ? BTW what is Aladin ?

B) I found a shop selling use 32bit 1Mb SIMMs for cheap. At the moment I have a 520STE with 1Mb (4 x 256Kb SIMMs). Can I use these 32bit SIMMS to get 2.5Mb ? (they are about 20$ each) I know you can use 8 or 9 bits, but what about 32bits ?

Thanx again,
Nick.

3618. Mag!X info please.

Newsgroup: comp.sys.atari.st
Date: 1994-05-30 10:18:21 UTC
From: mcssesw@dct.ac.uk
Message-ID: <1994May30.101821.1@dct.ac.uk>
Source record: 186483

I have an STe with 4Mb RAM, TOS 1.62 and an 80Mb hard disk. I am considering purchasing Mag!X to replace the OS. I have read that single tasking it will run faster than standard TOS. Is this correct?

How does Mag!X run GEM programs which do not use a window? Does it place its own window around the display?

Does Mag!X replace the standard file selector?

Can you quit from Mag!X like Terradesk?

Does GFA Basic 3.6 run on Mag!X in multitasking mode? I have heard that there are problems with GFA Basic running under MTOS.

Are there any other incompatibility problems with the system other than the music package identified in ST Review magazine?

Any other information would be greatly appreciated.

S.W.

millert@undergrad.ec.usf.edu. (Timothy Miller) writes:
>I've asked this before and never got an answer... what is an Archimedes, and
>what is it like?
>

I can't believe you have never heard of this truly great machine ! It is built by Acorn in the UK and uses the ARM range of processors, the basic models use an ARM 2 chip, while the higher end models use an ARM 3. However the best thing about Acorn is the release of their new machine called the RISC PC, which is compatible with the Archimedes, this uses an ARM 610 and has speed comparable to a very fast 486. It has two slots for processors, so it is possible to have both an ARM chip inside as well as an antual 486 or other processor, running in parallel. Other features of this machine are fast 24bit graphics (2 Meg's of VRAM) and also the ability to fit up to 256 Meg's of DRAM.

I hope this enlightens you in a little way !

Dan
Compiler of FT-POV for the Archimedes.

In article 4ss@charm.magnus.acs.ohio-state.edu, dackerma@magnus.acs.ohio-state.edu (Daniel D Ackerman) writes:
>>Excuse me, but how do you go about if you want to send video data to the TV at
>>50Hz and set the video sync to 60 Hz, as you say is possible?
>>Are we talking F030 specific code here?
>>I'm a programmer so feel free to mail an example in C or assembly!
>>
>>
> I have never looked for code to make it happen. Why would you? It just
>happens.

I asked to find out if you really know what you are talking about!
And by your answer I can see that you are not.

>Most european programmers code and assume 50Hz running on the system.
>Makes sense that's their video standard and that's what their machines run at.
>But American machines operate at a standard of 60Hz, this is our video standard
>so again it makes sense.

This is true.

>Now when an american boots their machine with a european demo, which is
>assuming the system is running at 50Hz, you get rolling screens.

Yes, this happen IF THE DEMO CHANGES THE SYNC RATE to one that your TV
cannot handle.

>Now if before you run this demo, you instead switch your system to PAL or 50Hz >whatever
you want to call it, then run the demo VOILA it works.

Really? I don't think so. If your TV could handle 50Hz the problem would not have
occured in the first place. And if your TV cannot handle 50HZ this would certainly
not work!

>The machine now knows what it's doing.
>The same thing plagued amiga owners. If you are lucky you can
>adjust your TV or monitor so that it's close enough to both not to care. If
>not you have to rely on switchers.
>
> Again it's not that big of a topic. If you have the problem adjust your
>set or run a switcher.

Sorry, this doesn't make any sense!
I don't think you know what you are talking about,
or maybe I don't understand what you are trying to say?

> Actually, at 50hz, you get 25fps, and at 60hz, you get 30fps. Interlacing,
> remember.

No, think again.
Most rez (all rez on the ST/STE) are non interlaced so you will get 50/60 fps
if your code is fast enough!

> However, on the Falcon, a much faster machine, this should no longer be
> necessary. There should be plenty of time durring the vertical blank at 60hz
> to get the work done, regardless of the fact that 320x200xTC has 4 times as
> much data to manipulate than ST low....

Hmm, I think that is a contradiction... :-)
The F030 is operating 2-3 times as fast as the ST and has 4-8 times the data
to operate on! You really need all the clock-cycles you can get...

> most ST demos were full screen, while most Falcon demos I've seen work
> in a little window on the screen.

Guess why!

That is not just a problem with this programm.
You will get great problems with the descicon.rsc if you use bigger icons than 32*32!!!! Even when they are smaller, I can remember!!
Of course only when you use the TOS not Gemini or something like that...

Hi,

I'll be visiting LA in August, and thought it would be nice opportunity to visit some Atari Dealers and other shops that sell Atari goodies. If you know of such shops, please mail me their address and maybe telephone number. Most importantly, I would very much like to know where to get the Atari Compendium (as it is unavailable here in Holland, and you can't get anywhere without proper documentation :-().

Thanks,

P.S.: Does the Compendium also contain info about the 56001, or should I buy a seperate book to program that one. Which one would you recommend?

"Will this work withthe Syquests? How does one (a)
partition a syquest so that Mac and ST partitions can
exist on the same cartyridge,or is it more sensible to
have separate cartridges formatted differently?"

Once the Syquest cart is mounted, you can treat it exactly as you would any other hard drive attached to the ST.

Unless the Syquest is your only HD, I personally would recommend using separate carts for the Mac and ST stuff.

You noted you did not recieve the ICD software with you Syquest. If you have an ICD host adapter in your system, you need only download the latest update of the ICD software from the ICD BBS, or one of the online services. I would also imagine it is available via FTP from some site.

In a message dated 4-16-94, Rowland Baker said:

"Does anyone know if it _will_ be possible to hook an
external/portable CD Drive to the Jaguar (and will
Triplespeed, etc. yield that much of an advantage
without being optimized for?)? =)"

It is very likely the Jag CD will use a proprietary interface, rather
than SCSI. This would mean you would need to design and build a SCSI
interface for the Jag that would precisely emulate that interface.

Likewise, attempting to use the Jag CD with a Falcon would either require
designing and build something to convert the Jag CD's interface to SCSI,
or interfacing it with one of the other ports on the Falcon, and writing
a custom driver to access it via that port.

>purchasing Mag!X to replace the OS. I have read that single tasking it will run
>faster than standard TOS. Is this correct?

Yes, it will be faster than TOS.

>How does Mag!X run GEM programs which do not use a window? Does it place its
>own window around the display?

No. GEM programs that do not use windows are a problem.

>Does Mag!X replace the standard file selector?

Yes, but the Mag!X file selector is not much better than TOS. Get
Selectric, that works very well with Mag!X or TOS.

>Can you quit from Mag!X like Terradesk?

No, Mag!X is an OS, not a desktop.

>Does GFA Basic 3.6 run on Mag!X in multitasking mode? I have heard that there
>are problems with GFA Basic running under MTOS.

No idea. It's unlikely to run properly because it's not a 'legal' GEM app.

>Are there any other incompatibility problems with the system other than the
>music package identified in ST Review magazine?

There will always be compatibility problems with programs that assume
screen ownership and similar problems. However, if you run in a single
tasking mode these problems are less likely.

Upgrading and old STFM
I have just acquired an ST FM. It has 512kb of soldered ram. I would like
1-4mb of ram.

Is there anybody who can solder in the 16 ? 4164? ram chips

I know getting this machine was a mistake...but...I am stuck with it now!

Any assistance would be greatly appreciated.

> about 32bits ?

I've never seen a 32 bit SIMM, but I would imagine that they are longer
then
the 8 bit ones normally used, how would they fit into the slots?

I suppose that if you were willing to wire up the simms, provide some
decoding, it might be possible. I need to think about this though, I am not
familiar with the pinout of 32 bit simms.

Seems like a hard way to go about it.

"I found a shop selling use 32bit 1Mb SIMMs for cheap. At
the moment I have a 520STE with 1Mb (4 x 256Kb SIMMs).
Can I use these 32bit SIMMS to get 2.5Mb ? (they are about
20$ each)"

No...they will not fit. Standard 8-bit SIMMs, such as the ST and older
Macs use have 30 connections on the edge, while the 32-bit SIMMs used in
the newer Macs have 72 connections on the edge.

3634. Neodesk, memory hog?

Newsgroup: comp.sys.atari.st
Date: 1994-05-30 12:58:09 UTC
From: jpb3@ukc.ac.uk
Message-ID: <8167@merlin.ukc.ac.uk>
Source record: 186499

I have a 2mb STE, and was wondering how much of a memory hog Neodesk is.

Is it worth it, to leave Neodesk in memory permanently, if I have a 2mb machine? I have a hard drive, but reloading of Neodesk still takes a certain time, which sometimes can be annoying.

Thanks for any help,

DMJ shelved it for a while as he was working on other projects (View II for example). Soundlab 2 will be commercial due to a poor shareware response for v1. Last I spoke to him (March) he'd lots of plans for v2, but implementation wasn't due to start until around now.

Note that the registration address in 1.1 is now defunct, but you can contact the author at:

I am running Neodesk 3.03 on my Mega 2 ST and lots of accessories and autoload programs. When I check I have about 750K free. I am able to run everything that I use without having to unload Neodesk. Best to try it out and see what kinds of problems you have.

Time to clean house - lots of good games - come with boxes and docs
unless noted otherwise.

SimCity - voted 89 best consumer program - you design and build
the city of your dreams $20
Populous - another of the really great games for the ST - you
build empires, conquer lands and wreak havoc $20
Hunt for Red October - submarine combat simulation based on movie $16
Falcon F16 - Best of Year - F16 flight simulator - still regarded
as one of the best on other platforms $16
Accolade's Test Drive - choice of 5 super cars in a first person
driving simulation. Experience the feelings. $16
Atari ST Star Raiders - galactic adventuring - box slightly crushed $13
Microprose's Kennedy Approach - air traffic control simulation in one
of nations busiest airports $13
Microprose's Gunship - AH-64 Appache attack helicopter simulation $13
Rainbird's Carrier Command - run a carrier task force on an assault
of an island - design your own tanks and planes $13
Mindscape's Shadowgate - graphic fantasy adventure $10
Pirates of the Barbary Coast - historical based graphic trading
adventure game against the Pirates off the Barbary coast $10
Spectrum Holobyte's GATO - Submarine simulation of World War II
Gato class subs - D-Day Special - box falling apart $10
Major Motion - rid highways of lawlessness and make land safe for
civilians - driving car game $8

Prices include shipping-Conus. Take whole lot(includes shipping-conus) $140

I simply renamed XCONTROL.ACC to CONTROL.ACX and by default
Chameleon loads it and it works flawlessly for me.
This is on my Mega ST4 under TOS 1.2 (or is that 1.02?).
Also, i have mym sys set up to have 6 Chameleons altered to
auto-load my 6 favorite ACC's on start-up. Does anyone else use this
nice feature?

It was none other than William Kent that wrote on 25 May 94 that ,
WK> Does anybody out there have any hands-on experience with the new ST
WK> OS SMS2?

Fiddled about with it at a recent Atari show and without getting a look at the manual's I couldn't get it to do anything at all so 0 out of 10 for intuative interface <Grin>

Having said that I hacked away at it in the dark and couldn't make it fall over either so it look's like it's pretty stable !

WK> Indy and an AS/400, I got interested. But I find it hard to believe
WK> what the articel said.

From what I saw It is absolutely brimming with features and power .It was runing a Midinetwork from floppy/520STFM and load's of other thing's without any problem's except for the app's were not the best I'd ever seen.

WK> So could anyone comment on this new OS? Wheter or not is really
WK> does speed up the ST 8.25 times? And what kind of software that is
WK> available for it? Does anyone know if anything by GNU is running on
WK> it? Or POV?

The software looked pretty limited ATM , My opinion is that it is a real amazing piece of hardware that will be of no use whatsoever to the majority of ST user's but the OS freak's will love it as it is VERY 'interesting' in that respect and sure is something to make PC user's go a bit green that such a humble system as a 520STFM at 8Mhz can do what it can do :-) I think It might find a role in Education and amongst academic circles but doesn't strike me as a useful platform for running general application's on.

WK> One other thing if those specs are correct, it would seem logical
WK> that fitting such a unit to a TT (or even better a Medusa) would give
WK> you a Cray at home :-)

maybe :-) But then I don't think Calamus or Cubase Audio (or any other fav Atari soft's) are available for a Cray so is that going to be of any use to you ???

Answers:

MAC-See is a commercial program that may help you out here, I do
not know about a sharware version. Send EMAIL to MRBURKLEY@Delphi.com,
he maintains a very comprehensive list of all shareware available.

b) No- you need 1X8 simms 1X9 may work, I cant remember off the top of
my head. 32bit SIMMs will not work.

All,
So, is it, or is it not, possible for me to acchieve 57.6Kbs transfers through a 'standard' 14.4Kbps modem while using built-in MNP error-correction and data-compression?
I have an unmodified Mega St4 (no "E") and have installed HSMODE04. I do not know if I have installed it correctly though. What HSMODE04 files do I need in AUTO and are the "y, n, n, uuuuuu, y, 4096, 4096" settings suggested earilir sufficient to get to 57.6Kbps?
Please help! I've seen this rate done on a friends PC with an internal card 14.4 modem and would _really_ like it here at home on my _more expensive_ INTeL modem! :)
Thanks a bunch!

The STE is a 16 bit buss machine, and the Ram is split into 8 bits, for byte
access..

You need 8 bit SIMMS, or mod the STE to use 9 bit SIMMS, the unused 9th
bit must have the inputs terminated to 0v or +v, so just connect pins
28,29 and 30 together....pin 30 is +v....

Yes I have had a play with a 5000 from memory, has a very nice GUI,
far better the GEM or Windows, from memory the 5000 can do 12 mips...

Kills any thing that Atari has....

Used here a lot in schools.....

ARM Risc chips are used in the Apple Newton, and I think in some new
Lazer printers....

Matt, you say that you have 6 Chameleons loaded in your DA slots. How, exactly did you do that? I cannot get more than 2 Chameleons to run at the same time under TOS2.06. However my friend with a TOS1.62 STE can get 3 or more to run. We both tried to do it the same way, by re-naming the 2nd, 3rd, etc, Chameleons so we'd have Chameleon, Chamel2on, and Chamel3on on the boot drive (C). It worked for her and not for me :(Any clues why this is so?

^^^^^^^^^^^^^^^^

Pun intended? :)

As for re-design of the Falcon case, my advice is to not hold your breath.
It's hard to fathom if Atari's ever even gonna do another production run
of the EXISTING form, let alone design something new (other than Jaguar,
of course...)

: DT>
: You CANT get a SupraFaxModem V32" to work beyond 19200 baud!!!
: If you want a Supra modem that works beyond 19200 baud you have to buy the new
: SupraFaxModem 288

With v.32bis compression, you can often get rates much higher than 19200. I think the problem is the computer, not the modem. Most highspeed modems allow you to set the port to at least 57600.

The only disadvantage of programs without windows is, that you cant
'top' the program by clicking into the window. You can always switch
to the program via the menu-bar or with the keyboard shortcut.

Under MultiTOS these windowless GEM programs have the same problem and
MTOS uses the same solution.

Not around GEM programs, but it will run TOS programs in a window.

>Does GFA Basic 3.6 run on Mag!X in multitasking mode? I have heard that there
>are problems with GFA Basic running under MTOS.

Mag!X offers a single-tasking mode for ill-behaved applications such
as GFA Basic. It will probably work in this mode, but while running
GFA Basic, the system won't multitask.

It's possible to persuade gcc to produce output suitable for QDOS (and
thus for SMS2) but at present the C68 libraries need a bit of work.
However, you need fairly substantial resources to run gcc at all...

>I must definitely flame this, c68 available for QDOS and SMS2
>is very small (.i -> .s phase about 110K) full K&R and ANSI
>and some extras (printf format string checking ....)
>AND FULL sources and extensive libraries(curses,regexp ....).
>AND FREE
>AND ALL relevant GNU utils ported(except gdb, this is a real
>drawback)

Hmm. GNU Make is a relevant GNU utility which AFAIK hasn't been ported to
QDOS/SMS. (Picky, picky...) Porting gdb would be nontrivial.

>The library makes great effort to make porting unix programs
>easy, only differences are in fork/exec and this is much more
>comprehensive under QDOS/SMS2 than unix.

I'd very much like to hear what you think is missing from Unix in the area
of multitasking support that QDOS/SMS2 has.

>Xwindows is not ported, nobody attempted to make it work with
>a QL (<2Mbytes in the vast majority).

I shouldn't imagine an X port is very likely.

>Otherwise it should not be a problem.
>
>The provided window system is very easy and extremely effective
>to use - makes intelligent use of the keyboard, pointer/window
>placing strategies etc..

Provided the programmer is intelligent, just like with GEM and any other GUI it's easy to produce hideous and botched programs.

>>> How similar to Unix is the multitasking?
>
>c68 libs make it appear very similar,

Err, I'd say they make it appear fairly different, actually. Look up what fork() is supposed to do on any Unix system and then say c68 does anything remotely similar. The exec..() calls all take extra parameters in the C68 libs that aren't required by the Unix versions. Also there's no signal support as such, and signals are quite important to multitasking under Unix.

>otherwise very different,
>extremely fast job-switch (about 0x68 bytes context information
>under QDOS)
>
>>IMHO don't bother. I've had a bit of experience of standard QL QDOS
>>(which as I said I *believe* SMS2 to be an enchanced port off, and in most
>>ways it has no advantages over TOS/MiNT or MINIX. Its only advantage would
>>be its compactness and efficiency.

If you _already_ like QDOS and have an ST (for whatever reason) then you probably should bother. Otherwise, if you want a fast, compact multitasking system which, although it can't run TOS/GEM programs does already have a software base, you might be interested. You'll have to get used to another way of doing things, but, no pain: no gain.

>some advantage is the THING system.
>A THING is an named block of memory - or object, depending

>Extensions in things may also use a very sophisticated
>parameter description/checking

Currently Things are most widely used for supporting resident programs and a standardised format of extension (i.e. a kind of shared library.)

>This provides fairly sophisticated and fast job communication
>without such overhead as with REXX or similar.
>
>In my view the biggest difference between QDOS and SMS2

>shared code of program instances, but also requires
>reentrancy of the programs.

Modern Unix implementations are quite good at code-sharing too. However,
you need extra hardware to perform the particular trick I'm thinking of
(i.e. a MMU.)

>but thats all.

If you look at the system call interface for SMS2 you will find large chunks of it are essentially the same as that of QDOS. Hence it will run some QDOS programs. However, it is not a QDOS port in that the underlying operating system does many things in completely different ways. (e.g. the job control block is somewhat different.)

If you want QDOS running on an Atari ST, that's possible as well, though you need an extra bit of electronics to emulate the Ql's display modes for this to be useful.

SMS2 users will want to know which QDOS programs they can use. The answer is: some. One can divide QDOS program into three categories.

1) games --- you can be pretty sure that what QDOS games there are won't run under SMS2.

2) old-fashioned programs --- programs written many years ago, or programs written as if they were written many years ago. Many of these won't run under SMS2 because they makes invalid assumptions about QDOS. (That may sound odd, but it turns out that they won't work under certain versions of QDOS either.) This sort of program is becoming rarer and rarer, but they're still around.

3) modern programs --- usually easy to spot since they use a GUI interface very similar to that found under SMS2. If you have one of these then it's quite likely that it will work under SMS2 as well as QDOS.

The acid test, of course, is to try the program in question and see; though that's a bit annoying if you've paid money for it and it doesn't work...

I bought UMS II when it first came out and loved it.I was a bit dissapointed when they didn't sell the planet editor with it as the whole package seemed to be incomplete."Don't worry" the told us as it would be released soon.Fair enough I thought,its probably a nasty marketing ploy for them to get more cash.

That was a long long time ago.Has the planet editor,quite a vital part to the game ever been released for UMS II or has it all just been quietly forgotten about,more or less ripping everyone off,as we bought a Universal military simulator that can only simulate 3 battles,that is,the ones it was sold with.

I would be very glad if somebody could tell me if the planet editor has been released and where I could get it.

Thanks Rob Grant

There no other way for an Atari to read real Macintosh disks other than
with Spectre (still the best I think). Simply because the Mac uses a
variable speed which will give you an extra 10% more bytes (800 kbytes
instead of 720 kbytes for a DD-disk).
Aladin was the very first (software and German) Mac-emulator for the Atari
ST. It had a special disk-format (called Alaldin disk, only one file) and
it worked with modified programs (I think they called it patches). The
makers of Aladin also introduced a special virus to prevent illegal
copying.
The virus only worked on emulated (read Aladin) Macs.
Aladin is past

BTW What's new on Spectre (Gadgets-by-Small) Is it still pushing the edge??

Cool. Would it be safe to assume then that MiNT-Net would work
on top of this version, without having to go patching at the
sources like you have to for 1.10? Just wondering...

-> minimal cost to cover printing cost.

Great idea. It's about time that we discuss ways to make things
'smoother' and more even across the board. *grin*

3699. Help! Saved position disaster (Frontier)

Newsgroup: comp.sys.atari.st
Date: 1994-05-31 13:46:56 UTC
From: sjdrew@cen.ex.ac.uk
Message-ID: <Cqo6A9.4wB@cen.ex.ac.uk>
Source record: 186265

Can anyone help this idiot who has managed to lose all his saved positions
for Frontier (Elite II)?

I clicked on the load position option before changing the disk, but when
I inserted my saved position disk all the saved positions weren't there.
Reloading and doing things correctly made no difference. All other files
on the disk are still there (saved positions for other games mainly),
but there is no trace of the Frontier files.

I tried using a disk utility (on a copy) to recover my mistake, but with
no success. From saving a position to a blank disk, and examining that
it appears Frontier saves info in gibberish which doesn't help. I found
similar gibberish on my data disk, but I don't know how to get the game
to find it again.

Any help would be appreciated as I had been playing solidly for 4 months
(Dangerous, Viscount) and can't face a restart.

thanks

Stephen

3700. Re: Chameleon-latest version?

In this newsgroup Hallvard Tangerï¿½s wrote the following:
(at We., May 25th 94 - 3:52AM)

HT>Where is it available, if the author has made a newer version. I think
HT>mine is version 1,09 or 1,19 or something with a "9" in it.

It's Chameleon 1.19 ...
Still run's best on all(?) Ataris (except Jag).

Bye

I have the old version of DBMan for the ST. I would sell it very cheap.
It is a full copy, manuals and all.

Can someone please direct me to anywhere/anyone who knows how
dungeon master stores it's saved games. It is to everyones benefit
as I am writing a new DM editor and hope to include everything you
need, so any suggestions are welcome. I've used DM_13E or whatever
and found it adequate but could be improved a great deal. If there
is already a new DM editor after this program then could someone
tell me ? Cheers.

Oh yes and does anyone know where to FTP "WALLS OF ILLUSION" ??
This looks *Exactly* like Dungeon Master and is PD !!

-Lea.

Hello everybody !!

I would like to discuss with Bill Devonshire about a program he has written. This program is named 3D2 to POV. I use it with big *.3D2 (from Cyberstudio) files, and the message is always "stack overflow". Bill told in the .DOC file to contact him on Genie at B.Devonshire, but I think I can't access to this network. So please, if someone could tell me how to contact him, I would be happy. Maybe he has an Internet adress. So thanks for your help.
My adress is lecoat@marion.ief-paris-sud.fr. Bye for now ...
FLC

3706. Re: Can't get Mega 2 beyond 19200 baud!

> The only idea I have is to get one of the new 28.8 baud modems, I prefer a Zoom

There seems to be a lot of confusion about this. First, any of today's "fast" modems (>=9600 baud) supports some sort of error correction and data compression scheme (EC/DC). To get a better idea of what happens, here is a wonderful ASCII picture:

```
+--------+ +------+ +------+ +--------+
|computer|<----->|mod 1 |<---.......--->|mod 2 |<----->|computer|
| A | x1 +------+ x2 +------+ x3 | B |
+--------+ +--------+
```

OK, computer A is talking to modem 1 at speed x1, modem 1 is talking to modem2 at speed x2 (over a phone line), and computer B is communicating with modem2 at speed x3. Now, with modern modems and EC/DC protocols, all of the speeds x1, x2, x3 can be different (and in fact should be, though x1 can equal x3)!!

The speed x2 is the baud specification for the modem (14400 baud, for example). However, since that is a _compressed data stream_, then data can come out of either modem at speeds faster than x2. Think of it this way: you can compress a 100k file to 50k, download it, and uncompress it back to 100k on your host machine. Thus, in a sense you transferred 100k in the time it takes to "really" transfer 50k. Another way to look at it is that you doubled your modem's "virtual" speed. EC/DC modems do this all by themselves in hardware. The potential compression for v.32bis is 4X (that is, data can come out of the modem at a maximum of 4 X 14400 = 57600 baud).

Now, here is the kicker. You want to define speeds x1 and x3 to be higher than the baud rate of the modem, x2. If you do not, you will not be able to get any advantage from the data compression! The modems must be able to talk to the computers faster than they can each other. That is why you want to set the baud rate in your terminal program higher than 14400.

Realistically, you will rarely have your modem go over about 2500 CPS (characters per second, calculated by assuming 10 bits per character), even

with data compression. You can certainly create cases where this is wrong (downloading a big file of English words as text, for example), but for real world use this is a good estimate. Note that this is for _text_, which compresses well. Most binary downloads are of already compressed files, which do not compress well. I average about 1650 CPS on binary downloads of .lzh and .zip files on my MegaSTE. This equates to 16500 baud (again, 10 bits per character), which means that I am getting some help from data compression (as it is above 14400 baud, the max "real" line speed), but not a huge amount.
